### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 March 2018
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 January 2018
Global end of trial reached?	Yes
Global end of trial date	25 January 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

This randomised controlled clinical trial was designed to show at least non-inferiority of treosulfan-based conditioning to reduced-intensity conditioning therapy based on intravenous (i.v.) busulfan and to compare the associated safety profiles. The aim of the study was to compare event-free survival within 2 years after the allogeneic haematopoietic stem cell transplantation (HSCT) between treosulfan-based conditioning and busulfan-based conditioning. Events are defined as relapse of disease, graft failure or death (whatever occurs first).

Protection of trial subjects:

This study was conducted in accordance with current applicable regulations, International Council for Harmonisation (ICH) of Good Clinical Practice, the principles of the Declaration of Helsinki, as well as other applicable local ethical and legal requirements.

In addition, a Data Monitoring Committee (DMC) was implemented to periodically assess the safety and efficacy as pre-specified in the clinical trial protocol. The DMC monitored the accumulating data from the clinical trial to detect and report early evidence of pre-specified or unanticipated benefit or harm to trial participants that was attributable to one of the treatments under evaluation.

The patients were informed about the modalities of the clinical study by an authorized member of the study team (physician) in a language they understood.

Patients could withdraw from the study without giving reasons and without penalty or loss of benefits to which the patient was otherwise entitled.

Background therapy:

Mandatory immunosuppression and GvHD-Prophylaxis were given in the test and reference arm. This included Fludarabine, Ciclosporin, Methotrexate, Ca-Folate for all countries involved.

In addition patients in Germany, Italy, Hungary, Poland received ATG-S-Fresenius / Grafalon®, and in France ATG-Thymoglobuline (in case of matched unrelated donor (MUD) only).

Other concomitant treatments, which were not standardized, were conducted according to the center-specific policy.

Evidence for comparator:

Busilvex® (i.v. busulfan) was selected as reference regimen within this trial. This reference treatment regimen was confirmed by EMA.

The drug is registered in Europe for conditioning treatment prior to conventional haematopoietic progenitor cell Transplantation.

The combination of dose-reduced busulfan and fludarabine is approved and actually one of the most frequently used and widely accepted regimens. Especially for leukaemia, lymphoma or MDS patients RIC (reduced intensity conditioning treatment) with dose-reduced busulfan was extensively evaluated within retrospective and prospective clinical trials.

Actual start date of recruitment	13 June 2013
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	4 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

**Population of trial subjects**

---

**Subjects enrolled per country**

---

Country: Number of subjects enrolled	Poland: 77
Country: Number of subjects enrolled	France: 14
Country: Number of subjects enrolled	Germany: 387
Country: Number of subjects enrolled	Hungary: 35
Country: Number of subjects enrolled	Italy: 57
Worldwide total number of subjects	570
EEA total number of subjects	570

Notes:

---

**Subjects enrolled per age group**

---

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	422
From 65 to 84 years	148
85 years and over	0

## Subject disposition

### Recruitment

#### Recruitment details:

The trial was registered on 21-04-2008 with FSI on 24-11-2008. Following the recommendation of the DMC (20-02-2012), the trial was temporarily suspended and newly set up after amendment 03 with significant design changes. Recruitment re-started on 13-06-2013. Results provided are based exclusively on the 570 patients randomized after 13-06-2013.

### Pre-assignment

#### Screening details:

A total of 570 subjects were enrolled at 31 sites in 5 countries. 553 subjects received IMP (test or reference medication).  
17 subjects dropped out before treatment: 16 subjects did not meet the inclusion and exclusion criteria and 1 subject withdrew consent.

### Period 1

Period 1 title	Treatment and 24 month follow up
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

#### Blinding implementation details:

The sponsor was blinded with respect to aggregated data until data extraction for the second interim analysis (final confirmatory analysis).

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Treosulfan

#### Arm description:

The Treosulfan arm includes all randomised patients who were treated with Treosulfan at least once.

Arm type	Experimental
Investigational medicinal product name	Treosulfan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

#### Dosage and administration details:

Treosulfan 10 g/m<sup>2</sup> body surface area (BSA), 2 hours i.v. infusion Day -4, -3, -2

The 2-hour infusion of the total Treosulfan solution was to be given prior to fludarabine infusion (in case both drugs were given on the same day).

<b>Arm title</b>	Busulfan
------------------	----------

#### Arm description:

The Busulfan arm includes all randomised patients who were treated with Busulfan at least once.

Arm type	Active comparator
Investigational medicinal product name	i.v. Busulfan
Investigational medicinal product code	
Other name	Busilvex®
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

#### Dosage and administration details:

Busulfan 4 x 0.8 mg/kg Body weight, 2 hours i.v. infusion every 6 hours, Day -4, -3 (total of eight doses).

<b>Number of subjects in period 1<sup>[1]</sup></b>	Treosulfan	Busulfan
Started	270	283
Completed	191	165
Not completed	79	118
Adverse event, serious fatal	8	6
Consent withdrawn by subject	2	2
Did not receive transplant	2	-
Death	64	101
AML progression	1	-
Lost to follow-up	-	7
Site closure	2	2

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of subjects in the baseline period reflects the number of subjects who received IMP.

## Period 2

Period 2 title	Post-surveillance evaluation
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Post-surveillance_Treosulfan

Arm description:

This arm of the post surveillance period includes all patients who received Treosulfan and completed the study alive 2 years after HSCT.

Post-surveillance was conducted one year after transplantation of the last randomised patient. Follow-up data were obtained for a period of up to 4 years after transplantation.

A post surveillance visit was not applicable for 10 patients because the post surveillance visit would have to be performed shortly after the 24 Month visit.

For 1 patient the post-surveillance visit was filled in although the Month 24 visit was not performed.

Arm type	Experimental
Investigational medicinal product name	Treosulfan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Treosulfan 10 g/m<sup>2</sup>, 2 hours i.v. infusion Day -4, -3, -2

A 2-hour infusion of the total Treosulfan solution was to be given prior to fludarabine Infusion (in case both drugs were given on the same day).

<b>Arm title</b>	Post-surveillance_Busulfan
------------------	----------------------------

---

**Arm description:**

This arm of the post surveillance period includes all patients who received Busulfan and completed the study alive 2 years after HSCT.

Post-surveillance was conducted one year after transplantation of the last randomised patient. Follow-up data were obtained for a period of up to 4 years after transplantation.

A post surveillance visit was not applicable for 10 patients because the post surveillance visit would have to be performed shortly after the 24 Month visit.

For 1 patient the post-surveillance visit was filled in although the Month 24 visit was not performed.

Arm type	Active comparator
Investigational medicinal product name	i.v. Busulfan
Investigational medicinal product code	
Other name	Busilvex®
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Busulfan 4 x 0.8 mg/kg Body weight, 2 hours i.v. infusion every 6 hours, Day -4, -3 (total of eight doses).

<b>Number of subjects in period 2<sup>[2]</sup></b>	Post-surveillance_Treosulfan	Post-surveillance_Busulfan
Started	135	117
Completed	116	101
Not completed	19	16
Death	9	5
Lost to follow-up	-	1
Not applicable	10	10

---

**Notes:**

[2] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Only subjects who had completed the Month 24 visit were qualified for the "Post-surveillance evaluation" period.

## Baseline characteristics

### Reporting groups

Reporting group title	Treosulfan
Reporting group description:	
The Treosulfan arm includes all randomised patients who were treated with Treosulfan at least once.	
Reporting group title	Busulfan
Reporting group description:

### Secondary: Other CTC grade III/IV adverse events

End point title	Other CTC grade III/IV adverse events
-----------------	---------------------------------------

End point description:

Comparative evaluation of incidence of other significant CTC grade III/IV adverse events. Other significant adverse events in this trial (beside of mucositis) are HSOS (hepatic sinusoidal obstruction syndrome) (reported terms "HSOS", "HSOS (VOD" (veno-occlusive disease) ) etc. as determined by medical expert; allocated to CTCAE term "hepatobiliary disorders – other, specify"), seizures (CTCAE term "seizure"), and blood bilirubin increased (CTCAE term "blood bilirubin increased") between day -4 and day +28.

End point type	Secondary
----------------	-----------

End point timeframe:

Day -4 to Day +28

Day -4 was chosen as starting point for evaluation since administration of the investigational product started on this day.

End point values	Treosulfan	Busulfan		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	270	283		
Units: percent				
number (confidence interval 95%)				
HSOS	0.0 (0.0 to 1.4)	0.4 (0.0 to 2.0)		
Seizures	0.4 (0.0 to 2.0)	0.0 (0.0 to 1.3)		
Blood bilirubin increased	3.3 (1.5 to 6.2)	2.8 (1.2 to 5.5)		

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Treatment emergent adverse event from day -4 to day +28 (related to the allogeneic haematopoietic stem cell transplantation).

Adverse event reporting additional description:

Adverse event reporting is based on the Safety Analysis Set (SAS). The SAS consists of all randomized patients who were treated at least one time with study medication.

Patients reporting more than one episode of the same event were counted only once by the worst CTCAE Grade.

Assessment type	Non-systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 March 2013	<p>Modifications were recommended by the DMC after evaluation of the first planned interim analysis and the trial was newly set up after protocol amendment 03. The dose of the test arm was reduced from 3 x 14 g/m<sup>2</sup> Treosulfan to 3 x 10 g/m<sup>2</sup>. In addition, the treatment regimen of the test arm was changed so that administration of both test and reference drug was started the same day (Day -4 prior to allogeneic HSCT). Moreover, the follow-up period of transplanted patients was extended from 1 year to 2 years after Transplantation, the sample size increased and the statistical planning revised.</p> <p>Due to the substantial changes, previously enrolled patients (part 1) were not included in the statistical analysis. Thus, the modified new part of the study reported here (part 2) has to be considered an independent study.</p>
10 July 2015	<p>The responsibilities for planned statistical interim analyses and DMC reports were transferred to an independent contract research organisation.</p> <p>A new pharmacokinetic sub-study was to be implemented and conducted at one German site due to dose reduction of Treosulfan after amendment 03 and newly available bioanalytical methods for Treosulfan and epoxide detection.</p> <p>Further minor changes were made to promote future study conduct, monitoring and documentation, including the reduction of protocol appendices.</p> <p>For a better comprehensibility, all paragraphs related to protocol versions prior to amendment 03 were deleted.</p> <p>The patient information was revised to include an update of the Summary of product characteristic (SmPC) of the comparator Busilvex®.</p> <p>An additional patient information and informed consent form was provided for the site that was to perform the pharmacokinetic sub-study.</p>
02 December 2016	<p>The CRO contracted for trial conduct was replaced with another CRO.</p> <p>Textual changes were made to country specific clinical trial protocols in order to provide one integrated protocol for all countries.</p> <p>It was clarified that the DMC was to meet on a yearly basis after the trial is open to patient enrolment until the last patient enrolled had been treated. Thereafter, no changes in trial conduct could result from DMC recommendations. In addition the DMC was to meet at the pre-specified time points of confirmatory efficacy analyses.</p> <p>The range of permissible IMP dose deviation (previously &lt; 10%) was aligned with the exclusion criteria of patients from the Per Protocol Set (PPS) (deviation of at most plus/minus 20%).</p> <p>For the initial examinations it was clarified that it is sufficient to measure either diffusing capacity of the lung for carbon monoxide (DLCOS) Hb-adjusted or forced expiratory volume 1 second (FEV1).</p> <p>Mucositis was considered a significant adverse event in trial MC-FludT.14/L.</p> <p>Although differently described in the Clinical Trial Protocol, confirmatory superiority testing was not planned for the event 'mucositis'. Relevant sections of the Clinical Trial Protocol were revised.</p> <p>The definition of engraftment after HSCT was clarified in order to avoid misinterpretations.</p> <p>The Investigational Medicinal Product Dossier (IMPD) was updated and submitted.</p>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
26 September 2012	The trial had already been registered in the EudraCT data base on 21-April-2008 with first patient in on 24-NOV-2008. Following the recommendation of the independent DMC the MC-FludT.14/L trial was temporarily suspended to accrual. This modification was recommended by the DMC, because of concerns about prolonged neutropenia and subsequent serious infectious complications in the Treosulfan group. Due to substantial protocol changes, all previously enrolled patients (Part I) were not included in the statistical analysis of trial data collected after re-activation. Accordingly, the final results provided are based exclusively on the 570 patients randomized after protocol amendment 03 including post-surveillance follow-up of surviving patients. An overview about the final results for patients enrolled before protocol amendment 03 (Part I) are given in the synopsis uploaded to this EudraCT record.	13 June 2013

Notes:

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The final results provided here are based exclusively on the 570 patients randomized after protocol amendment 03.  
Final results for patients enrolled before protocol amendment 03 (Part I) are given in the synopsis uploaded to this EudraCT record.

Notes:
