Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 July 2018
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	20 December 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

For Phase 1: To assess the safety and tolerability of palbociclib in combination with letrozole in postmenopausal women with Estrogen Receptor (ER)-positive, Human Epidermal Growth Factor Receptor 2 (HER2)-negative advanced breast cancer. For Phase 2: To assess the effect of palbociclib plus letrozole and of letrozole alone on progression-free survival (PFS) in the first-line treatment of ER-positive, HER2-negative advanced breast cancer in postmenopausal women.

Protection of trial subjects:

The study was conducted in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 September 2008
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	86 Months
Independent data monitoring committee (IDMC) involvement?	No

Country: Number of subjects enrolled	Ukraine: 24
Worldwide total number of subjects	177
EEA total number of subjects	89

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	96
From 65 to 84 years	80
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

This Phase 1/2, open-label, randomized study enrolled a total of 12 subjects at 3 sites in the United States for Phase 1. Phase 1 subjects received Palbociclib + Letrozole. In Phase 2, a total of 165 subjects were randomized (84 in Palbociclib plus Letrozole arm and 81 in Letrozole alone arm) at 50 sites in 12 countries.

Pre-assignment

Screening details:

Phase 2 portion has 2 parts. Phase 2, Part 1 – ER positive, HER2 negative postmenopausal women with advanced breast cancer. Phase 2, Part 2- ER positive, HER2 negative postmenopausal women with tumors demonstrating CCND1 gene amplification and/or loss of CDKN2A gene.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase 1 (Palbociclib + Letrozole)

Arm description:

In Cycle 1 (3 weeks), subjects received single agent Palbociclib 125 milligrams per day (mg/d) orally for 2 weeks followed by 1 week off treatment. In Cycles 2 and beyond (4 weeks each), subjects received Letrozole 2.5 mg/d in a continuous regimen plus Palbociclib 125 mg/d orally for 3 weeks followed by 1 week off treatment.

Arm type	Experimental
Investigational medicinal product name	Palbociclib
Investigational medicinal product code	PD 0332991
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Palbociclib 125 milligram (mg) was administered orally, once in a day, up to 2 weeks followed by 1 week off treatment in Cycle 1. In Cycle 2 and beyond, Palbociclib 125 mg was administered orally once in a day for 3 weeks followed by 1 week off treatment. Cycle 1 was of 3 weeks and beyond that each cycle was of 4 weeks.

Investigational medicinal product name	Letrozole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Letrozole 2.5 mg was administered orally, once in a day, up to 3 weeks followed by 1 week off treatment from Cycle 2 and beyond.

Arm title	Phase 2 (Palbociclib + Letrozole)
------------------	-----------------------------------

Arm description:

All subjects who were randomized to Letrozole plus Palbociclib in both Phase 2 part 1 (Ph2P1) and Phase 2 part 2 (Ph2P2) are combined and presented. In Ph2P1 and Ph2P2, the subjects received Palbociclib 125 mg/d orally for 3 weeks followed by 1 week off treatment and Letrozole 2.5 mg/d orally in a continuous regimen.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Letrozole

Subject analysis set title	Letrozole alone (Cycle 2 Day 28)
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects received daily 2.5 mg doses of Letrozole alone.	

Primary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs; All Causalities) at Phase 1

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs; All Causalities) at Phase 1 ^{[1][2]}
-----------------	---

End point description:

AE: any untoward medical occurrence in subject who received study drug without regard to possibility of causal relationship. AEs included both serious and non-serious AEs. SAE: AE resulting in any of following outcomes/deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment emergent AE: events occurred between first dose of study drug and up to 28 days after last dose (up to 55 months) that were absent before treatment or worsened relative to pre-treatment state. AEs graded as per the Common Terminology Criteria for Adverse Events (CTCAE) version 3.0. Subjects with AE of grade 3, 4 and grade 5 reported as Grade 3: Severe, Grade 4: Life threatening, Grade 5: Death related to AE. Safety analysis set: subjects who received at least 1 dose of study drug.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to 28 days after last dose of study drug (for a maximum of 55 months)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint is descriptive in nature, no statistical analysis is provided'

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only arms which are applicable to the endpoint are reported.

Primary: Progression-Free Survival (PFS) at Phase 2 - Investigator Assessment

End point title	Progression-Free Survival (PFS) at Phase 2 - Investigator Assessment ^[7]
-----------------	---

End point description:

PFS was defined as the time from randomization (or the first dose of study treatment for non-randomized studies) to the first documentation of objective tumor progression or to death due to any cause, whichever occurred first. PFS calculated as (weeks or months) = (first event date minus randomization or the first dose date plus 1) divided by 7 (or 30.44 if in months). PFS is usually characterized by the median, 25% percentile, 75% percentile and their 95% confidence intervals (CIs). Intent-to-Treat (ITT) population included randomized subjects from Phase 2, where subjects were classified according to the randomized treatment regardless of what treatment, if any, was received. Here, "99999" represents data was not available as upper limit of confidence interval was not reached.

End point type	Primary
----------------	---------

End point timeframe:

From randomization date to date of first documentation of progression or death (assessed up to 41 months)

Notes:

[7] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Only arms which are applicable to the endpoint are reported.

Secondary: Number of Subjects With Increase From Baseline in Corrected QT (QTc) Interval at Phase 1

End point title	Number of Subjects With Increase From Baseline in Corrected QT (QTc) Interval at Phase 1 ^[13]
-----------------	--

End point description:

Triplicate 12-lead ECG measurements (each recording separated by approximately 2 minutes) were performed and average was calculated. The time corresponding to beginning of depolarization to repolarization of the ventricles (QT interval) was adjusted for RR interval using QT and RR from each ECG by Fridericia's formula ($QTcF = QT$ divided by cube root of RR), by Bazette's formula ($QTcB = QT$ divided by square root of RR) and corrected QT interval according to study-specific criteria (QTcS). Subjects with maximum increase from baseline of 30 to < 60 msec(borderline) and ≥ 60 msec (prolonged) were summarized. Safety analysis set: subjects who received at least 1 dose of study drug.

End point type	Secondary

-----------------	---

End point description:

Time in months from randomization or (start of study treatment for non-randomized studies) to first documentation of objective tumor progression. Time to progression was calculated as (first event date or last known progression-free date minus the date of randomization [or first dose of study medication for non-randomized studies] plus 1) divided by 30.44. Tumor progression was determined from oncologic assessment data (where data meet the criteria for progressive disease [PD] per RECIST). ITT population included randomized subjects from Phase 2, where subjects were classified according to the randomized treatment regardless of what treatment, if any, was received. Here, "number of subjects analyzed" signifies number of subjects evaluable for this endpoint for each arm and "99999" represents data not available as upper limit of confidence interval was not reached.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomization up to 41 months

Notes:

[26] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only arms which are applicable to the endpoint are reported.

Secondary: Change from Baseline in Modified Brief Pain Inventory in Pain Severity Scale (mBPI-sf) Questionnaire at Phase 2

End point title	Change from Baseline in Modified Brief Pain Inventory in Pain Severity Scale (mBPI-sf) Questionnaire at Phase 2 ^[35]
-----------------	---

End point description:

The mBPI-sf is a validated and reliable self-report questionnaire which consists of 13 questions that assess the severity and impact of pain on daily function. The 13 items of the questionnaire make up two scales and two single items. The scales include the 4-item Pain Severity Scale (worst pain, least pain, average pain, and pain right now) and the 7-item Pain Interference Scale (general activity, mood, walking ability, normal work and relations with other people, sleep, and enjoyment of life). Each item of the pain severity and pain interference scales are based on a 11-point numeric rating scale from 0 ("no pain" or "does not interfere") to 10 ("pain as bad as you can imagine" or "completely interferes"). Patient reported outcome evaluable subjects: who had received at least 1 dose of study medication, had baseline data, and at least one post-baseline measurement. Here, "number of subjects analyzed" signifies number of subjects evaluable for this endpoint for each arm.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Month 41

Notes:

[35] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only arms which are applicable to the endpoint are reported.

End point description:

Gene copy number for CCND1 (CCND1/CEP11) and p16/INK4A (p16/CEP9) were evaluated. This analysis was done for Phase 2 combined group. Copy number analysis set included all subjects who had at least one copy number assessment. Here, "number of subjects analyzed" signifies number of subjects evaluable for this endpoint for each arm.

End point type	Secondary
----------------	-----------

End point timeframe:

Screening visit (≤ 28 days prior to dosing)

Notes:

[45] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Only arms which are applicable to the endpoint are reported.

Secondary: Percentage of Subjects With Tumor Expression of CYP19A1 and CCND1 Genotypes at Phase 2

End point title	Percentage of Subjects With Tumor Expression of CYP19A1 and CCND1 Genotypes at Phase 2 ^[46]
-----------------	--

End point description:

One 2-mL blood specimen was collected for the analysis of germline polymorphism in CYP19A1 and CCND1 genes. A single nucleotide polymorphism (SNP) rs4646 as defined in the National Center for Biotechnology Information (NCBI) database in the aromatase gene (CYP19A1) was analyzed. A germline polymorphism G/A870 (rs9344) in the CCND1 gene was analyzed. Polymorphism analysis set included subjects who had at least 1 polymorphism assessment. Here, "number of subjects analyzed" signifies number of subjects evaluable for this endpoint for each arm.

End point title	Number of Subjects with TEAEs (All Causalities) at Phase 2 ^[47]
-----------------	--

End point description:

AE: any untoward medical occurrence in subject who received study drug without regard to possibility of causal relationship. AEs included both serious and non-serious AEs. SAE: AE resulting in any of following outcomes/deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability/incapacity; congenital anomaly. Treatment emergent AE: events occurred between first dose of study drug and up to 28 days after last dose (up to 86 months) that were absent before treatment or worsened relative to

pre-treatment state. AEs graded as per the CTCAE version 3.0. Subjects with AE of grade 3, 4 and grade 5 reported as Grade 3: Severe, Grade 4: Life threatening, Grade 5: Death related to AE. All treated as treated set included all treated subjects classified by treatment actually received.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 28 days after last dose of study drug (for a maximum of 86 months)

Adverse event reporting additional description:

An event may be categorized as serious in one subject and non serious in another, or 1 subject may experience both event. All treatment emergent AEs and SAEs were collected and reported. The same event may appear as both AE and SAE. Analysis was done on subjects who received at least one dose of study drug.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Phase 1 (Palbociclib + Letrozole)
-----------------------	-----------------------------------

Reporting group description:

In Cycle 1 (3 weeks), subjects received single agent palbociclib 125 mg/d orally for 2 weeks followed by 1 week off treatment. In Cycles 2 and beyond (4 weeks each), subjects received letrozole 2.5 mg/d in a continuous regimen plus Palbociclib 125 mg/d orally for 3 weeks followed by 1 week off treatment.

Reporting group title	Phase 2 (Palbociclib + Letrozole)
-----------------------	-----------------------------------

Reporting group description:

All participants who were randomized to letrozole plus palbociclib in both Phase 2 part 1 (Ph2P1) and Phase 2 part 2 (Ph2P2) are combined and presented. In Ph2P1 and Ph2P2, the participants received palbociclib 125 mg/d orally for 3 weeks followed by 1 week off treatment and letrozole 2.5 mg/d orally in a continuous regimen.

Reporting group title	Phase 2 (Letrozole)
-----------------------	---------------------

Reporting group description:

All participants who were randomized to receive letrozole alone in both Phase 2 part 1 (Ph2P1) and Phase 2 part 2 (Ph2P2) are combined and presented. This was considered as control arm. Letrozole 2.5 mg/d was administered orally in a continuous regimen.

Reporting group title	Ph2P1 (Palbociclib + Letrozole)
-----------------------	---------------------------------

Reporting group description:

All participants were randomized to receive Letrozole plus Palbociclib. Palbociclib 125 mg/d orally for 3 weeks followed by 1 week off treatment and Letrozole 2.5 mg/d orally in a continuous regimen.

Reporting group title	Ph2P1 (Letrozole)
-----------------------	-------------------

Reporting group description:

Participants were randomized to receive Letrozole alone. Letrozole 2.5 mg/d was administered orally in a continuous regimen. This was considered as control arm.

Reporting group title	Ph2P2 (Palbociclib + Letrozole)
-----------------------	---------------------------------

Reporting group description:

Participants were randomized to receive Letrozole plus Palbociclib. Palbociclib 125 mg/d orally for 3 weeks followed by 1 week off treatment and Letrozole 2.5 mg/d orally in a continuous regimen.

Reporting group title	Ph2P2 (Letrozole)
-----------------------	-------------------

Reporting group description:

Participants were randomized to receive Letrozole. Letrozole 2.5 mg/d was administered orally in a continuous regimen. This was considered as control arm.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 July 2009	Due to the possible effect of administration of a high-fat meal on PD 0332991 exposure, a new guideline was added for subjects to fast from 1 hour before to 2 hours after administration of PD 0332991 on non-serial PK days. The list of prohibited drugs that might interact with CYP3A4 was updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
