Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 October 2017
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 October 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to determine the safety profile of long-term vedolizumab treatment

Protection of trial subjects:

At each visit, the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study treatment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 May 2009
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	4 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Hong Kong: 3
Country: Number of subjects enrolled	India: 63
Country: Number of subjects enrolled	Australia: 100
Country: Number of subjects enrolled	Malaysia: 17

Country: Number of subjects enrolled	Switzerland: 6
Country: Number of subjects enrolled	United Kingdom: 2
Worldwide total number of subjects	2243
EEA total number of subjects	820

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	2167
From 65 to 84 years	76
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part in study at 298 sites in North America, Western/Northern Europe, Central Europe, Eastern Europe, Asia, Australia and Africa from 22 May 2009 to 31 October 2017.

Pre-assignment

Screening details:

Participants with a diagnosis of ulcerative colitis and Crohn's disease who participated in previous studies: C13004 (NCT00619489), C13006 (NCT00783718), C13007 (NCT00783692) and C13011 (NCT01224171) and DeNovo participants were enrolled into 1 treatment group, vedolizumab 300 mg, 30-minute intravenous (IV) infusion, every 4 weeks (Q4W).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Vedolizumab 300 mg (C13006)

Arm description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 430 weeks including treatment in the previous study. In study C13006: participants received either vedolizumab matching placebo or vedolizumab every Q4W or vedolizumab every 8 weeks (Q8W), IV infusion up to Week 52.

Arm type	Experimental
Investigational medicinal product name	Vedolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Vedolizumab Intravenous Infusion

Investigational medicinal product name	Vedolizumab Matching Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Vedolizumab Matching Placebo Intravenous Infusion

Arm title	Vedolizumab 300 mg (C13007)
------------------	-----------------------------

Arm description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 429 weeks including treatment in the previous study. In study C13007: participants received either vedolizumab matching placebo or vedolizumab Q4W or vedolizumab Q8W, IV infusion up to Week 52.

Arm type	Experimental

End points

End points reporting groups

Reporting group title	Vedolizumab 300 mg (C13006)
Reporting group description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 430 weeks including treatment in the previous study. In study C13006: participants received either vedolizumab matching placebo or vedolizumab every Q4W or vedolizumab every 8 weeks (Q8W), IV infusion up to Week 52.	
Reporting group title	Vedolizumab 300 mg (C13007)
Reporting group description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 429 weeks including treatment in the previous study. In study C13007: participants received either vedolizumab matching placebo or vedolizumab Q4W or vedolizumab Q8W, IV infusion up to Week 52.	
Reporting group title	Vedolizumab 300 mg (C13011)
Reporting group description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 315 weeks including treatment in the previous study. In study C13011: participants received either vedolizumab matching placebo or vedolizumab 300 mg, IV infusion, at Weeks 0, 2 and 6.	
Reporting group title	Vedolizumab 300 mg (C13004)
Reporting group description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 510 weeks including treatment in the previous study. In study C13004: participants received either vedolizumab 2 mg/kg or 6 mg/kg, IV infusion Q8W up to Week 78.	
Reporting group title	Vedolizumab 300 mg (C13008 De Novo Participants)
Reporting group description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 260 weeks in participants with Crohn's disease (CD) or ulcerative colitis (UC) not treated in a previous study.	
Subject analysis set title	Vedolizumab 300 mg (UC)
Subject analysis set type	Safety analysis
Subject analysis set description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W, up to approximately 260 weeks. Includes De Novo participants and participants previously enrolled in studies C13004 and C13006 with a diagnosis of Ulcerative colitis (UC).	
Subject analysis set title	Vedolizumab 300 mg (CD)
Subject analysis set type	Safety analysis
Subject analysis set description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W, up to approximately 260 weeks. Includes De Novo participants and participants previously enrolled in studies C13004, C13007 and C13011 with a diagnosis of Crohn's disease.	
Subject analysis set title	Vedolizumab 300 mg (UC)
Subject analysis set type	Safety analysis
Subject analysis set description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W, up to approximately 260 weeks. Includes De Novo participants and participants previously enrolled in studies C13004 and C13006 with a diagnosis of Ulcerative colitis.	
Subject analysis set title	Vedolizumab 300 mg (CD)
Subject analysis set type	Safety analysis
Subject analysis set description: Vedolizumab 300 mg, 30-minute IV infusion, Q4W, up to approximately 260 weeks. Includes De Novo participants and participants previously enrolled in studies C13004, C13007 and C13011 with a diagnosis of Crohn's disease.	
Subject analysis set title	Vedolizumab 300 mg
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W, up to approximately 260 weeks.

Subject analysis set title	Vedolizumab 300 mg (C13006 Placebo)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 430 weeks including treatment in the previous study. In study C13006: vedolizumab matching placebo, IV infusion at Weeks 0 and 2 (Days 1 and 15). Participants continued to receive placebo during the Maintenance Phase, regardless of treatment response during Induction phase up to Week 50.

Subject analysis set title	Vedolizumab 300 mg (C13006 Vedolizumab Q8W)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 430 weeks including treatment in the previous study. In study C13006: vedolizumab 300 mg, intravenous infusion at Weeks 0 and 2 (Days 1 and 15) in Induction Phase. In the Maintenance Phase, participants who demonstrated a clinical response at Week 6 according to protocol-specified criteria received vedolizumab, IV infusion, Q8W up to Week 50.

Subject analysis set title	Vedolizumab 300 mg (C13006 Vedolizumab Q4W)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 430 weeks including treatment in the previous study. In study C13006: vedolizumab 300 mg, intravenous infusion at Week 0 and Week 2 (Days 1 and 15) in Induction Phase. In the Maintenance Phase, participants who demonstrated a clinical response at Week 6 according to protocol-specified criteria received vedolizumab, IV infusion, Q4W up to Week 50.

Subject analysis set title	Vedolizumab 300 mg (C13007 Placebo)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 429 weeks including treatment in the previous study. In study C13007: vedolizumab matching placebo, intravenous infusion at Weeks 0 and 2 (Days 1 and 15). Participants continued to receive placebo during the Maintenance Phase, regardless of treatment response during Induction up to Week 52.

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 430 weeks including treatment in the previous study. In study C13006: vedolizumab 300 mg, intravenous infusion at Week 0 and Week 2 (Days 1 and 15) in Induction Phase. In the Maintenance Phase, participants who demonstrated a clinical response at Week 6 according to protocol-specified

criteria received vedolizumab, IV infusion, Q4W up to Week 50.

Subject analysis set title	Vedolizumab 300 mg (C13007 Vedolizumab Q8W)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 429 weeks including treatment in the previous study. In study C13007: vedolizumab 300 mg, IV infusion at Weeks 0 and 2 (Days 1 and 15) in Induction Phase. In the Maintenance Phase, participants who demonstrated a clinical response at Week 6 according to protocol-specified criteria received vedolizumab, IV infusion, Q8W up to Week 52.

Subject analysis set title	Vedolizumab 300 mg (C13007 Vedolizumab Q4W)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 429 weeks including treatment in the previous study. In study C13007: vedolizumab 300 mg, intravenous infusion at Weeks 0 and 2 (Days 1 and 15) in Induction Phase. In the Maintenance Phase, participants who demonstrated a clinical response at Week 6 according to protocol-specified criteria received vedolizumab, IV infusion, Q4W up to Week 52.

Subject analysis set title	Vedolizumab 300 mg (C13011 Placebo)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 315 weeks including treatment in the previous study. In study C13011: vedolizumab matching placebo, IV infusion at Weeks 0, 2 and 6.

Subject analysis set title	Vedolizumab 300 mg (C13011 Vedolizumab)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately up to 315 weeks including treatment in the previous study. In study C13011: vedolizumab 300 mg, IV infusion, at Weeks 0, 2 and 6.

Subject analysis set title	Vedolizumab 300 mg (C13008 De Novo Participants - UC)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W, up to approximately 260 weeks in participants with ulcerative colitis not treated in previous study.

Subject analysis set title	Vedolizumab 300 mg (C13008 De Novo Participants - CD)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W, starting at Week 0, up to approximately 260 weeks in participants with Crohn's disease not treated in a previous study.

Subject analysis set title	Vedolizumab 300 mg (C13006 Placebo)
Subject analysis set type	Intention-to-treat

Subject analysis set description:

Vedolizumab 300 mg, 30-minute IV infusion, Q4W in this study. Treatment duration was up to approximately 430 weeks including treatment in the previous study. In study C13006: vedolizumab matching placebo, IV infusion at Weeks 0 and 2 (Days 1 and 15). Participants continued to receive placebo during the Maintenance Phase, regardless of treatment response during Induction phase up to Week 50.

Subject analysis set title	Vedolizumab 300 mg (C13006 Vedolizumab Q8W)
Subject analysis set type	Intention-to-treat

Primary: Percentage of Participants with One or More Treatment-emergent Adverse Events (TEAEs) and Serious Adverse Events (SAEs)

End point title	Percentage of Participants with One or More Treatment-emergent Adverse Events (TEAEs) and Serious Adverse Events (SAEs) ^[1]
-----------------	--

End point description:

An AE is defined as any untoward medical occurrence in clinical investigation participant administered a drug; it does not necessarily have to have causal relationship with the treatment. An AE can therefore be any unfavorable and unintended sign (eg, clinically significant abnormal laboratory finding)/symptom/disease temporally associated with use of drug, whether or not it is considered related to drug. TEAE is defined as an AE with onset that occurs after receiving study drug. SAE is any experience that suggests significant hazard, contraindication, side effect or precaution that results in death, is life-threatening, required in-patient hospitalization/prolongation of existing hospitalization, results in persistent or significant disability/incapacity, is a congenital anomaly/birth defect or is medically significant. Safety population, participants who participated in Studies C13004, C13006, C13007, C13011 and De Novo participants who received vedolizumab in Study C13008.

End point type	Primary
----------------	---------

End point timeframe:

From first dose of study drug in this study through 16 weeks after the last dose of study drug (Up to approximately 8.5 years)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not planned for this endpoint.

Primary: Change from Baseline in the Inflammatory Bowel Disease Questionnaire (IBDQ) Scores at Week 28

End point title	Change from Baseline in the Inflammatory Bowel Disease Questionnaire (IBDQ) Scores at Week 28 ^[6]
-----------------	--

End point description:

IBDQ is an instrument used to assess quality of life in adult participants with IBD. It includes 32 questions on 4 domains of Health-Related Quality-of-Life (HRQOL): Bowel Systems (10 items), Emotional Function (12 items), Social Function (5 items), and Systemic Function (5 items). Participants are asked to recall symptoms and quality of life from the last 2 weeks and rate each item on 7-point Likert scale (1=worst to 7=best). Total IBDQ score is calculated by summing scores from each domain; Total IBDQ score ranges from 32 to 224, with lower scores reflecting worse HRQOL. A positive change from Baseline indicates improvement. Intent to treat (ITT) population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 28. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type Primary

End point timeframe:

Baseline (prior to first dose of study drug in C13008; for rollover participants this was the last assessment from the previous study) and Week 28

Notes:

Primary: Change from Baseline in the Inflammatory Bowel Disease Questionnaire (IBDQ) Scores at Week 196

End point title	Change from Baseline in the Inflammatory Bowel Disease Questionnaire (IBDQ) Scores at Week 196 ^[13]
-----------------	--

End point description:

IBDQ is an instrument used to assess quality of life in adult participants with IBD. It includes 32 questions on 4 domains of Health-Related Quality-of-Life (HRQOL): Bowel Systems (10 items), Emotional Function (12 items), Social Function (5 items), and Systemic Function (5 items). Participants are asked to recall symptoms and quality of life from the last 2 weeks and rate each item on 7-point Likert scale (1=worst to 7=best). A total IBDQ score is calculated by summing the scores from each domain; total IBDQ score ranges from 32 to 224, with lower scores reflecting worse HRQOL. A positive change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 196. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (prior to first dose of study drug in C13008; for rollover participants this was the last assessment from the previous study) and Week 196

Notes:

[13] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not planned for this endpoint.

Primary: Change from Baseline in Short Form-36 (SF-36) Mental Component Score at Week 52

End point title	Change from Baseline in Short Form-36 (SF-36) Mental Component Score at Week 52 ^[20]
-----------------	---

End point description:

SF-36 is a questionnaire that evaluates a person's HRQOL. SF-36 includes 36 questions related to 8 health dimensions: physical functioning, role-physical (role limitations due to physical health problems), bodily pain, general health, vitality (energy/fatigue), social functioning, role-emotional (role limitations due to emotional problems), and mental health. Based on these 4 scales (vitality, social functioning, role-emotional, and mental health), the mental component summary (MCS) score is generated which ranges between 0 and 100, with higher scores indicating a better quality of life. A positive change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 52. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (prior to first dose of study drug in C13008; for rollover participants this was the last assessment from the previous study) and Week 52

Notes:

[20] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not planned for this endpoint.

Statistical analyses

Primary: Change from Baseline in Short Form-36 (SF-36) Physical Component Score at Week 148

End point title	Change from Baseline in Short Form-36 (SF-36) Physical Component Score at Week 148 ^[27]
-----------------	--

End point description:

SF-36 is a questionnaire that evaluates a person's HRQOL. SF-36 includes 36 questions related to 8 health dimensions: physical functioning, role-physical (role limitations due to physical health problems), bodily pain, general health, vitality (energy/fatigue), social functioning, role-emotional (role limitations due to emotional problems), and mental health. Based on these 8 scales, the physical component summary (PCS) score is generated which ranges between 0 and 100, with higher scores indicating a better quality of life. A positive change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 148. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (prior to first dose of study drug in C13008; for rollover participants this was the last assessment from the previous study) and Week 148

Notes:

[27] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not planned for this endpoint.

Primary: Change from Baseline in Short Form-36 (SF-36) Mental Component Score at Week 248

End point title	Change from Baseline in Short Form-36 (SF-36) Mental Component Score at Week 248 ^[34]
-----------------	--

End point description:

SF-36 is a questionnaire that evaluates a person's HRQOL. SF-36 includes 36 questions related to 8 health dimensions: physical functioning, role-physical (role limitations due to physical health problems), bodily pain, general health, vitality (energy/fatigue), social functioning, role-emotional (role limitations due to emotional problems), and mental health. Based on these 4 scales (vitality, social functioning, role-emotional, and mental health), the mental component summary (MCS) score is generated which ranges between 0 and 100, with higher scores indicating a better quality of life. A positive change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 248. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (prior to first dose of study drug in C13008; for rollover participants this was the last assessment from the previous study) and Week 248

Notes:

[34] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not planned for this endpoint.

Statistical analyses

No statistical analyses for this end point

Primary: Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Visual Analog Scale (VAS) Score at Week 52

End point title	Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Visual Analog Scale (VAS) Score at Week 52 ^[42]
-----------------	---

End point description:

EQ-5D questionnaire is an instrument used to measure general HRQOL in participants with IBD. Each dimension has three possible levels: 1 = none, 2 = moderate or 3 = extreme. The EQ-5D VAS score is a self-assigned rating of overall health using a 20-cm visual, vertical scale, with a score of 0 as the worst and 100 as the best possible health. An increase of ≥7 points in the EQ-5D VAS score represents a clinically meaningful improvement in quality of life for participants. A positive change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in

previous studies and de novo participants for whom data was collected at both Baseline and Week 52. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (prior to first dose of study drug in C13008; for rollover participants this was the last assessment from the previous study) and Week 52

Notes:

[42] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not planned for this endpoint.

Primary: Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Composite Score at Week 76

End point title	Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Composite Score at Week 76 ^[43]
-----------------	---

End point description:

EQ-5D health states questionnaire is an instrument used to measure general HRQOL in participants with IBD. It considers five attributes of quality of life evaluation: mobility, self-care, usual activity, pain/discomfort, and anxiety/depression. Each dimension has three possible levels: 1=none, 2=moderate or 3=extreme. A composite EQ-5D score can be calculated from the individual scores to assess overall HRQOL. A decrease of ≥ 0.3 points in the composite EQ-5D score represents improvement in quality of life of participants. A negative change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 76. Statistical analyses

No statistical analyses for this end point

Primary: Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Composite Score at Week 148

End point title	Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Composite Score at Week 148 ^[49]
-----------------	--

End point description:

EQ-5D health states questionnaire is an instrument used to measure general HRQOL in participants with IBD. It considers five attributes of quality of life evaluation: mobility, self-care, usual activity, pain/discomfort, and anxiety/depression. Each dimension has three possible levels: 1=none,

2=moderate or 3=extreme. A composite EQ-5D score can be calculated from the individual scores to assess overall HRQOL. A decrease of ≥ 0.3 points in the composite EQ-5D score represents improvement in quality of life of participants. A negative change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 148. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (prior to first dose of study drug in C13008; for rollover participants this was the last assessment from the previous study) and Week 148

Notes:

[49] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not planned for this endpoint.

Primary: Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Visual Analog Scale (VAS) Score at Week 248

End point title	Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Visual Analog Scale (VAS) Score at Week 248 ^[56]
-----------------	--

End point description:

EQ-5D questionnaire is an instrument used to measure general HRQOL in participants with IBD. Each dimension has three possible levels: 1 = none, 2 = moderate or 3 = extreme. The EQ-5D VAS score is a self-assigned rating of overall health using a 20-cm visual, vertical scale, with a score of 0 as the worst and 100 as the best possible health. An increase of ≥ 7 points in the EQ-5D VAS score represents a clinically meaningful improvement in quality of life for participants. A positive change from Baseline indicates improvement. ITT population from studies C13006, C13007, C13011 and de novo participants who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies and de novo participants for whom data was collected at both Baseline and Week 248. Not applicable for Vedolizumab 300 mg (C13004) arm group.

End point type	Primary

Primary: Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Composite Score at Week 300

End point title	Change from Baseline in European Quality of Life 5-Dimension (EQ-5D) Health States Composite Score at Week 300 ^[57]
-----------------	--

End point description:

EQ-5D health states questionnaire is an instrument used to measure general HRQOL in participants with IBD. It considers five attributes of quality of life evaluation: mobility, self-care, usual activity, pain/discomfort, and anxiety/depression. Each dimension has three possible levels: 1=none, 2=moderate or 3=extreme. A composite EQ-5D score can be calculated from the individual scores to assess overall HRQOL. A decrease of ≥ 0.3 points in the composite EQ-5D score represents improvement in quality of life of participants. A negative change from Baseline indicates improvement. ITT population from studies C13006, C13007 and C13011 who received vedolizumab in study C13008. Data is provided for participants who were completers in previous studies with data available at both Baseline and Week 300. Not applicable for Vedolizumab 300 mg (C13004) arm group. Data is not available for de novo participants at this time point.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose of study drug in this study through 16 weeks after the last dose of study drug (Up to approximately 8.5 years)

Adverse event reporting additional description:

At each visit the investigator had to document any occurrence of adverse events and abnormal laboratory findings. Any event spontaneously reported by the participant or observed by the investigator was recorded, irrespective of the relation to study treatment.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
14 October 2008	<ul style="list-style-type: none">• The primary change in this amendment involved the assessment of whether or not to analyze any antivedolizumab antibodies (AVA) -positive samples for neutralizing AVA.• Corrected the value for absolute lymphocyte count in the leukopenia and lymphopenia monitoring section.• Expanded the definition of serious adverse event (AEs) (SAE) to include any event that involves suspected transmission of an infectious agent via a medicinal product.
28 April 2009	<ul style="list-style-type: none">• The primary change in this amendment involved extending the window for participants to enroll in this study after the last dose of vedolizumab in Study C13004 from 5 to 9 weeks.• Revised the definition of rescue medications with all applicable exceptions, ie, to allow use of rectal steroids, 5-acetyl salicylic acid, and probiotics for all participants and allow use of antibiotics for Crohn's disease participants.• Revised inclusion criteria by removing the requirement of "stable dose" for participants on corticosteroids at the time of enrollment.• Revised the advice regarding prophylactic administration of premedication for better clarity.• Removed language regarding the transfer of adverse events and SAE information from the previous study to the C13008 electronic case report form.• Removed an unnecessary statement regarding the reporting of malignancies, as the reporting of malignancies is governed by the definitions and reporting requirements of AEs and SAEs.• Removed statements regarding pharmacodynamic sampling and objectives. There were no pharmacodynamic objectives or pharmacodynamic samples to be collected in this study at any time.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
