Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 December 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	07 July 2016
Global end of trial reached?	Yes
Global end of trial date	07 July 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Estimation of the complete remission rate of invasive tumor cells in the breast confirmed by histological examinations, at surgery.

The treatment of the mammacarcinoma consists in this study normally on 6 chemotherapy cycles of the combination Docetaxel, Epirubicine and Cyclophosphamide (TEC-therapy). Followed by the surgery of the carcinoma, which takes place on day 28 after the last chemotherapy application, at the latest. An evaluation of the response of the treatment is performed after 2 and 4 cycles by use of palpation and mamma sonography. In case of complete remission, partial remission and no change the patient receives further two TEC cycles. In case of progress under therapy the surgery is immediately performed.

Protection of trial subjects:

During the course of the trial, every patient was monitored closely concerning the described safety parameters. Besides the documentation of adverse events, this encompasses the following parameters:

- physical examinations
- Performancestatus (ECOG, Karnofsky Index)
- Labory parameters

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 March 2009
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 152
Worldwide total number of subjects	152
EEA total number of subjects	152

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	124
From 65 to 84 years	28
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Between March 2009 and February 2011, 152 patients were recruited to the NeoTEC study in 15 Trial sites in Germany. The trial contained one arm only.

Pre-assignment

Screening details:

Eligibility for the study if:

- Women with histologically verified mamma carcinoma (assessment of estrogen and progesterone receptors, grading, negative HER-2/neu status)
- All receptor-negative mamma carcinoma starting from cT1c, all receptor-positive mamma carcinoma starting from cT3, cT4 includes inflammatory mamma carcinoma

Period 1

Period 1 title	treatment period
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Study arm
-----------	-----------

Arm description:

Chemotherapy combination of Docetaxel, Epirubicine and Cyclophosphamide with breast preserving surgery

Arm type	Experimental
Investigational medicinal product name	Docetaxel
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Docetaxel 75 mg/m² every 3 weeks for 6 cycles

Investigational medicinal product name	Epirubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Epirubicin 75 mg/m² every 3 weeks for 6 cycles

Investigational medicinal product name	Cyclophosphamid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

500 mg/m² every 3 weeks for 6 cycles

Number of subjects in period 1	Study arm
Started	152
Completed	148
Not completed	4
Adverse event, serious fatal	2
Consent withdrawn by subject	1
Adverse event, non-fatal	1

Period 2

Period 2 title	Follow-up
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Follow-up
Arm description:	
5 years Follow-up after study treatment	
Arm type	Follow-up
No investigational medicinal product assigned in this arm	

Number of subjects in period 2	Follow-up
Started	148
Completed	126
Not completed	22
change to another treating institution	4
removal to another city/contry	2
Lost to follow-up	15
termination due to psychosocial problems	1
