

Clinical trial results:

Multicenter, open label, prospective study to evaluate the efficacy and safety of deferasirox 30 mg/kg/day for 52 weeks, in transfusion-dependent beta-thalassemic patients with cardiac MRI T2* <20 msec

Summary

EudraCT number	2008-003230-22
Trial protocol	IT

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 May 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	05 May 2011
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study was to evaluate the efficacy of deferasirox, administered daily at the dose of 30 mg/kg for 52 weeks, on iron overload and cardiac function in transfusion-dependent beta-thalassemic subjects with cardiac magnetic resonance imaging (MRI) T2* to be greater than (>) 5 milliseconds (msec) and less than (<) 20 msec.

The study was terminated when 20 subjects (less than required sample size i.e. 50) were included due to slow study recruitment rate as well as the concomitant availability of cardiac MRI T2* data in large cohorts of subjects treated with deferasirox.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 February 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Italy: 20
Worldwide total number of subjects	20
EEA total number of subjects	20

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	20
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was planned to be conducted at 4 centres in Italy. However, subjects were enrolled only at 2 centres.

Pre-assignment

Screening details:

A total of 20 subjects were enrolled into the study.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study, hence no blinding was performed.

Arms

Arm title	Deferasirox
-----------	-------------

Arm description:

Subjects received body-weight stratified dose of deferasirox 30 miligrams/kilograms (mg/kg) once daily for 52 weeks.

Arm type	Experimental
Investigational medicinal product name	Deferasirox
Investigational medicinal product code	ICL670
Other name	
Pharmaceutical forms	Dispersible tablet
Routes of administration	Oral use

Dosage and administration details:

Deferasirox 30 mg/kg/day was administered for 52 weeks.

Number of subjects in period 1	Deferasirox
Started	20
Completed	14
Not completed	6
Consent withdrawn by subject	2
Adverse event, non-fatal	1
Lack of efficacy	1
Protocol deviation	2

Baseline characteristics

Reporting groups

Reporting group title	Deferasirox
-----------------------	-------------

Reporting group description:

Subjects received body-weight stratified dose of deferasirox 30 miligrams/kilograms (mg/kg) once daily for 52 weeks.

Reporting group values	Deferasirox	Total	
Number of subjects	20	20	
Age categorical			
Units: Subjects			
Adults (20-37 years)	20	20	
Age continuous			
Units: years			
arithmetic mean	30.6		
standard deviation	± 4.9	-	
Gender categorical			
Units: Subjects			
Female	11	11	
Male	9	9	

End points

End points reporting groups

Reporting group title	Deferasirox
Reporting group description:	
Subjects received body-weight stratified dose of deferasirox 30 miligrams/kilograms (mg/kg) once daily for 52 weeks.	

Primary: Change from baseline in cardiac iron content as measured by Myocardial T2* technique at Week 52

End point title	Change from baseline in cardiac iron content as measured by Myocardial T2* technique at Week 52 ^[1]
-----------------	--

End point description:

Magnetic resonance Imaging (MRI) T2* technique was used to measure tissue iron in cardiac iron overload condition. A T2* 10--20 milliseconds (msec) indicated mild/moderate cardiac iron overload, and a T2* less than (<) 10 msec indicated severe cardiac iron overload. An unsatisfactory response was considered to be a monthly T2* improvement lower than 3% versus baseline. The analysis was performed in per-protocol (PP) population, defined as all enrolled subjects who received at least 1 dose of study drug, had no major protocol violations and completed the treatment study phase or withdrew from the study due to: a decrease of equal to or more than 1.2 msec in T2* versus baseline or a significant reduction in left ventricular ejection fraction (LVEF) according to clinical judgement, despite the deferasirox dose increase up to 40 mg/kg/day.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (screening), Week 52

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No analysis provided for terminated study.

End point values	Deferasirox			
Subject group type	Reporting group			
Number of subjects analysed	0 ^[2]			
Units: milliseconds (msec)				
arithmetic mean (standard deviation)	()			

Notes:

[2] - Study was terminated, the required sample size for analysis was not met.

Statistical analyses

No statistical analyses for this end point

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 October 2008	<ul style="list-style-type: none">• Updating the safety assessment according to latest European Union label of deferasirox regarding liver safety and symptoms of gastrointestinal ulceration and hemorrhage• Updating exclusion criteria to comply with recommendations for liver safety. Treatment has been initiated only in patients with baseline liver transaminase levels up to 5 times the upper limit of the normal range.• Information about concomitant use of other medicinal products was updated according to latest SmPC as well.• Furthermore, the statistical methods and data analysis section was modified as it was specified how changes in growth velocity parameters had to be analyzed and reported.
18 November 2010	The anticipating closure of subject enrollment was reduced to 20, prior reaching the target sample size of 50 subjects.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated when 20 subjects were included due to slow study recruitment rate as well as the concomitant availability of cardiac MRI T2* data in large cohorts of subjects treated with deferasirox.

Notes:
