

## Clinical trial results:

**Phase II randomised, double blind, multicentre study to assess the efficacy of AZD2281 in the treatment of patients with platinum sensitive serous ovarian cancer following treatment with two or more platinum containing regimens**

### Summary

EudraCT number	2008-003439-18
Trial protocol	GB BE DE PL CZ ES EE FR AT NL
Global end of trial date	12 October 2023

### Results information

Result version number	v1 (current)
This version publication date	22 December 2024
First version publication date	22 December 2024

### Trial information

#### Trial identification

Sponsor protocol code	D0810C00019
-----------------------	-------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

### Sponsors

Sponsor organisation name	AstraZeneca
Sponsor organisation address	1 Francis Crick Avenue, Cambridge Biomedical Campus, United Kingdom, CB2 0AA
Public contact	Tsveta Milenkova, AstraZeneca, ClinicalTrialTransparency@astrazeneca.com
Scientific contact	Anitra Fielding, AstraZeneca, ClinicalTrialTransparency@astrazeneca.com

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	26 November 2012
Is this the analysis of the primary completion data?	Yes
Primary completion date	26 November 2012
Global end of trial reached?	Yes
Global end of trial date	12 October 2023
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To determine the efficacy (assessed by PFS) of olaparib (capsule formulation) compared to placebo in the overall population.

Protection of trial subjects:

Repeat dose interruptions are to be allowed as required, for a maximum of 4 weeks (28 days) on each occasion. Where toxicity reoccur following re-challenge with AZD2281 or matching placebo, and where further dose interruptions are considered inadequate for management of toxicity, then the patient is to be considered for dose reduction or must permanently discontinue treatment. Treatment must be interrupted if any NCI-CTCAE grade 3 or 4 adverse event occurs which the Investigator considers to be related to administration of AZD2281 or matching placebo. If this has not resolved to at least NCI-CTCAE grade 1 by the dose interruption period and/or the patient has undergone 2 dose reductions already, the patient must discontinue treatment. When toxicity resolves, the patient may restart with a 50% dose reduction

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 August 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 31
Country: Number of subjects enrolled	Belgium: 13
Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	Estonia: 1
Country: Number of subjects enrolled	France: 11
Country: Number of subjects enrolled	Germany: 32
Country: Number of subjects enrolled	Israel: 26
Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	Poland: 11
Country: Number of subjects enrolled	Romania: 7
Country: Number of subjects enrolled	Russian Federation: 13
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	United Kingdom: 41
Country: Number of subjects enrolled	United States: 44
Country: Number of subjects enrolled	Ukraine: 14

Worldwide total number of subjects	265
EEA total number of subjects	90

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	185
From 65 to 84 years	80
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The first patient was enrolled on 28 August 2008 and the last patient was enrolled on 9 February 2010. Patients were enrolled at 82 centres in 16 countries. Of the 326 patients enrolled, 265 were randomized

### Pre-assignment

Screening details:

It was planned that 250 women with advanced platinum sensitive serous ovarian cancer who had received 2 or more previous platinum-containing regimens and demonstrated an objective stable maintained response in the last platinum regimen prior to enrolment were to receive olaparib 400 mg bd or matching placebo in a 1:1 ratio. 265 randomised.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst

Blinding implementation details:

AZD2281 and placebo matched AZD2281 treatments were blinded. The active and placebo capsules were identical and presented in the same packaging to ensure blinding of the study medication.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	olaparib 400 mg bd

Arm description:

AZD2281 olaparib (AZD2281) 400 mg oral capsules twice daily

Arm type	Experimental
Investigational medicinal product name	olaparib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

8 x 50 mg capsules consumed orally over 28 days at the same time each day with 240ml of water. they were swallowed whole at least 1 hour after food, and food could not be consumed 20 hours after taking a capsule

<b>Arm title</b>	Placebo bd
------------------	------------

Arm description:

olaparib matching placebo oral capsules twice daily

Arm type	Placebo
Investigational medicinal product name	placebo effect
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

the placebo was taken in the same way and form as the olaparib capsules

<b>Number of subjects in period 1</b>	olaparib 400 mg bd	Placebo bd
Started	136	129
Completed	28	11
Not completed	108	118
Adverse event, serious fatal	98	112
Lost to follow-up	2	3
Voluntary Discontinuation of Patient	7	3
Protocol deviation	1	-

## Baseline characteristics

### Reporting groups

## Secondary: Functional Analysis of Cancer Therapy - Ovarian (FACT-O) Time to Worsening

End point title	Functional Analysis of Cancer Therapy - Ovarian (FACT-O) Time to Worsening
-----------------	--

End point description:

The time to worsening was compared between treatments for each of the TOI, FOSI and total FACT-O. [Evaluable for FACT-O set]

End point type	Secondary
----------------	-----------

End point timeframe:

Patient reported outcome questionnaire completed at baseline then every 28 days up to disease progression

<b>End point values</b>	olaparib 400 mg bd	Placebo bd		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	111		
Units: Number worsening	72	63		

## Statistical analyses

<b>Statistical analysis title</b>	Analysis of FACT-O time to worsening
-----------------------------------	--------------------------------------

Statistical analysis description:

HR < 1 favours olaparib

Comparison groups	olaparib 400 mg bd v Placebo bd
Number of subjects included in analysis	225
Analysis specification	Pre-specified
Analysis type	
P-value	= 0.39
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	1.16
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.83
upper limit	1.64

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse Events will be collected from time of signed informed consent throughout the treatment period and up to and including the 30-day follow-up period

Adverse event reporting additional description:

128 participants in Placebo as 1 participant withdrew consent prior to treatment

Assessment type	Systematic
-----------------	------------

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 November 2008	Primary objective expanded to include patients with HRD tumours
27 November 2008	The window between last dose of platinum-containing regimen and starting study treatment extended. Clarification of aspects of the study design
27 November 2008	The following text regarding achievement of primary endpoint added: Tumour evaluations using CT/MRI according to RECIST will continue in the study until sufficient efficacy events for the analysis of PFS in the overall population, and the HRD sub-group have been confirmed. At this point investigators will be notified that CT/MRI for study purposes are no longer required
27 November 2008	Assessment Visit windows amended. Clarification of HRQL, CA-125, and CT/MRI assessments
27 November 2008	Amendment of inclusion criterion
27 November 2008	Amendment of exclusion criterion
27 November 2008	Amendment of restrictions
27 November 2008	Addition of following text to discontinuation criteria: Patients may continue to receive study treatment following objective progression provided that, in the opinion of the investigator, the patient is benefiting from the treatment and does not meet any other discontinuation criteria
27 November 2008	Amendment of management of toxicity of olaparib text
14 May 2009	Number of recruiting sites increased
14 May 2009	Statistical methods text added
14 May 2009	Visit days amended
14 May 2009	Inclusion criteria amended
14 May 2009	Restriction text amended
14 May 2009	Procedures for randomisation amended with the addition of the following text: It is recommended that patients commence study treatment as soon as possible after randomisation, and ideally within 3 days
14 May 2009	Screening text amended
17 May 2010	Interim analysis of PFS
17 May 2010	Analysis of PFS in the HRD population was removed as a co-primary objective.

17 May 2010	Secondary objective text "To obtain archival tumour samples for analyses of candidate biomarkers to identify the HRD subset of tumours for which increased sensitivity to AZD2281 is expected." Changed to "To enable retrospective identification of tumours with increased sensitivity to olaparib by obtaining archival tumour samples for potential biomarker analyses." and moved to exploratory objective. Associated secondary outcome variable text on candidate biomarkers moved to exploratory variable section
17 May 2010	Clarification that subset of patients with HRD tumours removed as an analysis population
17 May 2010	Addition of text on pneumonitis events
17 May 2010	Wording on contraception updated
17 May 2010	The number and total volume of blood to be drawn from each patient for clinical chemistry and haematology assessments was decreased
17 May 2010	The end of trial definition has been changed
02 November 2010	Estimated date of last subject completed changed from Q3 2010 to Q4 2012
02 November 2010	Changed assessments for survival from every 12 weeks to every 8 weeks following treatment discontinuation
02 November 2010	Patients and investigators will not be routinely unblinded to study treatment prior to the final OS analysis. Following a request to the study sponsor, patients and investigators may be unblinded on an individual basis if the information is essential for safety or subsequent treatment decisions following confirmed disease progression
02 November 2010	Patients who remain on study treatment will attend clinic every 8 weeks and the following assessments will be performed: physical examination, ECOG status, vital signs, haematology, clinical chemistry, urinalysis, AEs and concomitant medications. Dispensing visits may be performed on a 4 weekly basis, at the investigator's discretion, at which AEs must be assessed as a minimum. Following the approval of amendment 4, and in line with the frequency of safety assessments, olaparib will be dispensed to patients every 56 days if local practice permits. No further CA-125 plasma samples will be required, no amylase and lipase will be tested, no HRQL assessments will be required, and aPTT and INR will only require testing when clinically indicated
01 November 2011	Addition of an interim analysis of OS, to be performed when approximately 100 deaths have occurred, with the final analysis of survival at the same maturity as the PFS analysis.
01 November 2011	Update of list of events olaparib is associated with; bone marrow findings consistent with myelodysplastic syndrome/acute myeloid leukaemia added to study treatment discontinuation criteria; amendment of management of toxicity of olaparib text; section added on bone marrow or blood cytogenetic analysis
17 October 2012	Estimated date of last subject completed changed from Q4 2012 to Q1 2015
17 October 2012	After the interim analysis of OS is performed when approximately 100 deaths have occurred, a subsequent interim analysis of survival will be performed at approximately the same maturity as the PFS analysis (~60% maturity) (per amendment 05). Additional analyses of OS data may be performed to meet Regulatory Agency requests or to assist in the understanding of the data, which in turn supports decision making at AstraZeneca. The final survival analysis will be performed at approximately 85% maturity (~222 deaths). Collection of survival data will not continue beyond 85% maturity

17 October 2012	Amendment of text describing circumstances under which code may be broken for SAEs, to clarify that investigators and patients would not be unblinded
17 October 2012	Timescale within which patients must be contacted following the data cut-off for the primary and all subsequent survival analyses to provide complete survival data reduced from 1 week to 4 days
17 October 2012	Time for reporting SAEs and follow up information to Parexel reduced from 'no later than the end of the next business day' to 'no later than 24 hours' of becoming aware of it
17 October 2012	The data cut-off date for analysis of the primary endpoint will be established when a total of 137 PFS events have been observed in the overall population. Analysis of OS will be performed when approximately 100 deaths have occurred and again at approximately the same maturity as the PFS analysis (~60% maturity). The final survival analysis will be performed at approximately 85% maturity (~222 deaths). There will be a final data cut-off defined when OS meets approximately 85% maturity, when the clinical study database will closed to new data and all patients will be unblinded. Patients who are receiving active treatment can either choose to discontinue from the study or where the investigator believes patients are gaining clinical benefit, patients may continue to receive study treatment. All patients will receive follow up care in accordance with standard local clinical practice.
30 May 2013	Section 7.2.3.3 was further clarified and Section 7.2.3.4 was added to request follow-up of current survival status at the final OS analysis. This includes those patients that withdraw consent or are classified as "lost to follow up."

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

For OM DoR: The subset of patients evaluable for response who responded to study treatment. Values in results table may be under-estimates as some patients had not progressed at final analysis, so true duration is likely to be greater than in database.

Notes:
