Clinical trial results:
A Phase 3, Open-Label Trial, Evaluating the Safety, Tolerability, and Immunogenicity of 13-valent Pneumococcal Conjugate Vaccine in Healthy Children Previously Partially Immunized With Prevenar.

Summary

EudraCT number	2008-003631-21
Trial protocol	SE
Global end of trial date	23 June 2010

Results information

Result version number	v2 (current)
This version publication date	06 January 2017
First version publication date	29 July 2015
Version creation reason	• Correction of full data set reporting periods and duplicate AEs in their data

Trial information

Trial identification

Sponsor protocol code	6096A1-3012-EU

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00824655

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 December 2010
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	23 June 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the pneumococcal immune response induced by 13-valent pneumococcal conjugate vaccine (13vPnC) when measured 1 month after the infant dose of 13vPnC in Group 1.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 March 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 234
Worldwide total number of subjects	234
EEA total number of subjects	234

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	234
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total 234 subjects were enrolled from Sweden. The study started on 26 March 2009 and completed on 6 December 2010. Group 1 (13vPnC/13vPnC) subjects received 1 dose of Prevenar at least 42 days prior to study enrollment. Group 2 (13vPnC) subjects received 2 doses of Prevenar with the last dose at least 140 days prior to study enrollment.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	13vPnC/13vPnC

Arm description:

Subjects received 13vPnC at 5 months (Infant dose) and at 12 months (Toddler dose).

Arm type	Experimental
Investigational medicinal product name	13vPnC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received single dose of 0.5 milliliter (mL) 13vPnC intramuscularly (IM) at 5 months (Infant dose) at 12 months (Toddler dose).

Arm title	13vPnC

Arm description:

Subjects received 13vPnC at 12 months (Toddler dose) of age.

Arm type	Experimental
Investigational medicinal product name	13vPnC/ 13vPnC
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intramuscular use

Dosage and administration details:

Subjects received single dose of 0.5 mL 13vPnC IM at 12 months (Toddler dose).

Number of subjects in period 1	13vPnC/13vPnC	13vPnC
Started	118	116
Vaccinated infant dose	118	0 [1]
Vaccinated toddler dose	118	116
Completed	116	116
Not completed	2	0
Adverse Event	1	-
Parent/legal guardian request	1	-

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: No infant dose was administered to the subjects in this reporting group.

Baseline characteristics

Reporting groups	
Reporting group title	13vPnC/13vPnC
Reporting group description:	
Subjects received 13vPnC at 5 months (Infant dose) and at 12 months (Toddler dose).	
Reporting group title	13vPnC
Reporting group description:	
Subjects received 13vPnC at 12 months (Toddler dose) of age.	

Reporting group values	13vPnC/13vPnC	13vPnC	Total
Number of subjects	118	116	234
Age categorical Units: Subjects			
Age continuous Units: months			
arithmetic mean	5.1	11.9	
standard deviation	± 0.37	± 0.52	-
Gender categorical Units: Subjects			
Female	50	60	110
Male	68	56	124

End points

End points reporting groups

Reporting group title	13vPnC/13vPnC
Reporting group description:	
Subjects received 13vPnC at 5 months (Infant dose) and at 12 months (Toddler dose).	
Reporting group title	13vPnC
Reporting group description:	
Subjects received 13vPnC at 12 months (Toddler dose) of age.	

Primary: Geometric Mean Concentration (GMC) of Serotype-Specific Pneumococcal Immunoglobulin G (IgG) Antibodies 1 Month After the Toddler Dose

End point title	Geometric Mean Concentration (GMC) of Serotype-Specific Pneumococcal Immunoglobulin G (IgG) Antibodies 1 Month After the Toddler Dose[1]

End point description:

Antibody geometric mean concentration (GMC) as measured by microgram (mcg) per mL for 7 common pneumococcal serotypes (serotypes 4, 6B, 9V, 14, 18C, 19F, and 23F) and 6 additional pneumococcal serotypes specific to 13vPnC (Serotypes 1, 3, 5, 6A, 7F, and 19A) were presented. GMC (13vPnC) and corresponding 2-sided 95 percent (%) confidence intervals (CI) were evaluated. GMCs were calculated using all Subjects with available data for the specified blood draw. Evaluable Toddler Immunogenicity Population: eligible subjects who received study vaccine at the expected dose(s), blood drawn within specified timeframes, at least 1 valid and determinate assay result for proposed analysis, and no major protocol violations.

End point type	Primary

End point timeframe:

One month after the toddler dose (13 months of age)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Only descriptive data was planned to be reported for this endpoint.

End point values	13vPnC/13vPnC	13vPnC		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	114	115		
Units: mcg/mL				
geometric mean (confidence interval 95%)				
Common Serotype 4	5.27 (4.43 to 6.26)	5.06 (4.22 to 6.06)		
Common Serotype 6B	9.63 (8.01 to 11.57)	8.75 (6.76 to 11.32)		
Common Serotype 9V	3.5 (3.01 to 4.07)	3.33 (2.88 to 3.84)		
Common Serotype 14	9.22 (7.66 to 11.09)	9.3 (7.9 to 10.95)		
Common Serotype 18C	2.93 (2.5 to 3.44)	3.87 (3.3 to 4.53)		
Common Serotype 19F	7.7 (6.12 to 9.69)	8.31 (6.39 to 10.81)		
Common Serotype 23F	3.27 (2.68 to 3.99)	4.4 (3.7 to 5.22)		
Additional Serotype 1	14.65 (12.5 to 17.17)	1.58 (1.3 to 1.93)		

Additional Serotype 3	1.85 (1.59 to 2.15)	1.34 (1.13 to 1.58)		
Additional Serotype 5	7.02 (5.98 to 8.25)	1.44 (1.21 to 1.72)		
Additional Serotype 6A	6.14 (5.08 to 7.43)	2.48 (1.89 to 3.26)		
Additional Serotype 7F	5.86 (5.11 to 6.72)	3.55 (3.09 to 4.08)		
Additional Serotype 19A	7.25 (6.14 to 8.57)	13.16 (11.26 to 15.38)		

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Subjects Achieving a Serotype-specific IgG Antibody Greater Than or Equal To (≥) 0.35 Mcg/mL, 1 Month After the Infant Dose

End point title	Percentage of Subjects Achieving a Serotype-specific IgG Antibody Greater Than or Equal To (≥) 0.35 Mcg/mL, 1 Month After the Infant Dose[2]

End point description:

Percentage of Subjects achieving predefined antibody threshold ≥0.35 mcg/mL along with the corresponding 95% CI for the 7 common pneumococcal serotypes (serotypes 4, 6B, 9V, 14, 18C, 19F, and 23F) and 6 additional pneumococcal serotypes specific to 13vPnC (serotypes 1, 3, 5, 6A, 7F, and 19A) are presented. Exact 2-sided CI based on the observed proportion of subjects. Evaluable Infant Immunogenicity Population: eligible subjects who received study vaccine at the expected dose(s), blood drawn within specified timeframes, at least 1 valid and determinate assay result for proposed analysis, and no major protocol violations.

End point type	Secondary

End point timeframe:

1 Month after the infant series (6 months of age)

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: The endpoint was planned to be assessed for subjects who received infant dose

End point values	13vPnC/13vPnC

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs: Recorded from signing of informed consent form to completion of study(28-42 days post 13vPnC). Subjects recorded prespecified AEs in electronic diary:local reactions; systemic events (Day 1 - Day 7 post 13vPnC)

Adverse event reporting additional description:

The same event may appear as both an adverse event (AE) and a serious adverse event. However, what is presented are distinct events. An event may be categorized as serious in one subject and as non-serious in another subject, or one subject may have experienced both a serious and non serious event during the study.

Assessment type	Non-systematic

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[2] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[3] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[4] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[5] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[6] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[7] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[8] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.

[9] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[10] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[11] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[12] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[13] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
[14] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.
Justification:
Here, number of subjects exposed signifies subjects reporting yes for at least 1 day or no for all days.
