

## Clinical trial results:

### EWING 2008

#### Summary

EudraCT number	2008-003658-13
Trial protocol	DE AT BE NL SE HU FI LT PL
Global end of trial date	30 June 2019

#### Results information

Result version number	v1 (current)
This version publication date	12 January 2020
First version publication date	12 January 2020

#### Trial information

##### Trial identification

Sponsor protocol code	EWING2008
-----------------------	-----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-
Other trial identifiers	ClinicalTrials.gov: NCT00824083

Notes:

##### Sponsors

Sponsor organisation name	Universitätsklinikum Münster
Sponsor organisation address	Albert-Schweitzer-Campus 1, Gebäude D5, Münster, Germany, 48149
Public contact	EWING 2008 Trial Office, Universitätsklinikum Münster, 49 2017238082, ewing@uk-essen.de
Scientific contact	EWING 2008 Trial Office, Universitätsklinikum Münster, 49 2017238082, ewing@uk-essen.de

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

---

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 June 2019
Is this the analysis of the primary completion data?	Yes
Primary completion date	30 June 2019
Global end of trial reached?	Yes
Global end of trial date	30 June 2019
Was the trial ended prematurely?	No

Notes:

---

## General information about the trial

Main objective of the trial:

Randomised trial to test for superiority regarding event-free survival (EFS)

Standard Risk R1: in localised Ewing tumour (ET) with good histological response or initial tumour volume <200ml: fenretinide or bisphosphonates or bisphosphonates+fenretinide add-on to induction and maintenance chemotherapy versus no add-on treatment.

High Risk R2: in localised Ewing tumour with unfavourable histological response or tumour volume >200ml (R2loc): busulfan/melphalan high dose chemotherapy (HDT) and autologous stem cell reinfusion versus standard chemotherapy.

In pulmonary metastases: busulfan/melphalan HDT and autologous stem cell reinfusion (SCT) versus standard chemotherapy plus whole lung irradiation (R2pulm).

Very High Risk R3: in primary disseminated disease: treosulfan-melphalan HDT and autologous SCT add-on to 8 cycles of standard adjuvant chemotherapy versus 8 cycles of standard adjuvant chemotherapy alone.

---

Protection of trial subjects:

This study is conducted in accordance with applicable laws and regulations including, but not limited to, the ethical principles that have their origins in the Declaration of Helsinki and the International Conference on Harmonisation Guideline for Good Clinical Practice (GCP). Before any subjects are enrolled competent authorities and ethics committees concerned must grant authorisation and approval of this clinical trial. Before any procedures specified in this protocol are performed, the subject or subject's parent(s)/legal guardian must sign and date the approved informed consent form according to requirements stated in national law.

---

Background therapy:

Sufficient hydration (~ 2-3 L/m<sup>2</sup>/d), with appropriate electrolyte supplementation, during chemotherapy.

Antiemetic therapy was administered according to institutional policy, e.g., ondansetron 5 mg/m<sup>2</sup> BSA (maximum single dose 8 mg) orally or IV every 12 hours for 5 days.

Radiation of Blood Products: Due to the risk of graft-versus-host reactions in patients under chemotherapy, especially in case of high-dose therapy, all blood products (except fresh frozen plasma) were irradiated with at least 20 Gy prior to transfusion, according to national policies. The use of leukocyte filters for leukocyte depletion (CMV negativity) was advised.

Red blood cells: Haemoglobin should be kept above 6 g/dl (haematocrit above 20 %).

Platelets: Platelet substitution was advised when platelets are <10,000/ $\mu$ L or with clinical evidence of bleeding.

Central Lines: The use of central lines was strongly recommended. In HDT patients, multi-lumen central lines should be used for PBPC sampling and supportive care.

Pneumocystis carinii prophylaxis according to the recommendations of the national groups was mandatory.

Treatment of Infections (especially neutropenic infection) according to accepted general principles of supportive care.

---

Evidence for comparator:

EWING 2008 is a phase 3, open label, multi-centre, randomised controlled trial of international study groups with the intention of optimising treatment and treatment results in patients with localised and advanced Ewing sarcomas. The primary objective was to assess whether either of the randomised treatments is superior regarding 3-year event-free survival. The treatment was stratified according to prognostic factors as determined by previous studies. All patients received VIDE chemotherapy as induction treatment. Disease assessment was performed prior to treatment and after the 2nd (latest 3rd) and 5th (latest 6th) cycle of VIDE chemotherapy. Depending on the presentation at the time of diagnosis and on the histological response to induction chemotherapy, patients were stratified into to

the risk groups.

Actual start date of recruitment	01 October 2009
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

---

## Population of trial subjects

---

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 81
Country: Number of subjects enrolled	Poland: 8
Country: Number of subjects enrolled	Sweden: 19
Country: Number of subjects enrolled	Austria: 57
Country: Number of subjects enrolled	Belgium: 38
Country: Number of subjects enrolled	Czech Republic: 41
Country: Number of subjects enrolled	Finland: 7
Country: Number of subjects enrolled	Germany: 585
Country: Number of subjects enrolled	Hungary: 21
Country: Number of subjects enrolled	Lithuania: 1
Country: Number of subjects enrolled	Switzerland: 19
Country: Number of subjects enrolled	Australia: 30
Worldwide total number of subjects	907
EEA total number of subjects	858

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	251
Adolescents (12-17 years)	399
Adults (18-64 years)	257
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The patients were recruited from 120 trial sites in 12 countries. The recruitment period was from October 2009 to March 2018.

### Pre-assignment

Screening details:

The study included patients with histologically confirmed Ewing sarcoma of bone or soft tissue, either sex and age > 48 months (for Germany) and < 50 years at the date of diagnostic biopsy.

### Pre-assignment period milestones

Number of subjects started	907
Number of subjects completed	441

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Other: 85
Reason: Number of subjects	Medical contraindication/toxicity: 47
Reason: Number of subjects	Organisational reasons: 40
Reason: Number of subjects	Progress: 20
Reason: Number of subjects	Not available: 2
Reason: Number of subjects	Consent withdrawn by patient/parents: 172
Reason: Number of subjects	Physician decision: 100

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	R1 Add-on
------------------	-----------

Arm description:

Patients with localised disease and good histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have small tumours < 200 mL at diagnosis were included in the risk group Standard Risk R1.

Patients who were randomized into the R1 Add-on arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of either VAI (vincristine, actinomycin-D, ifosfamide) or VAC (vincristine, actinomycin-D, cyclophosphamide). In addition to induction and maintenance chemotherapy, patients were treated with zoledronic acid (Add-on treatment).

Arm type	Experimental
Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAC chemotherapy (cycles 7-14 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1,2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Ifosfamide is given on day 1 and 2 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Actinomycin D
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Intravenous use

Dosage and administration details:

VAI chemotherapy (cycles 7-14 at 21-day intervals): Actinomycin D is given on day 1 and 2 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAC chemotherapy (cycles 7-14 at 21-day intervals): Actinomycin D is given on day 1 and 2 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VAC chemotherapy (cycles 7-14 at 21-day intervals): Cyclophosphamide is given on day 1 in a dose of 1500 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Zoledronic acid
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intracavernous use

Dosage and administration details:

Patients randomised for zoledronic acid received zoledronic acid at 28-day intervals beginning with cycle 6 of VAC/VAI consolidation chemotherapy (cycle 12 from start of chemotherapy) for a maximum of nine

cycles. Patients < 18 years received 0.05 mg/kg BW by IV infusion 30 min-1 h. In patients ≥ 18 years zoledronic acid was dosed according to body weight: Patients > 40kg received 4 mg by IV infusion 30 min-1 h. Patients 20-40 kg received 2 mg by IV infusion 30 min-1 h.

<b>Arm title</b>	R1 No Add-on
------------------	--------------

**Arm description:**

Patients with localised disease and good histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have small tumours < 200 mL at diagnosis were included in the risk group Standard Risk R1.

Patients who were randomized into the R1 No Add-on arm received only 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of either VAI (vincristine, actinomycin-D, Ifosfamide) or VAC (vincristine, actinomycin-D, Cyclophosphamide). No additional treatment with zoledronic acid was administered to the patients (No Add-on treatment).

Arm type	Active comparator
Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

**Dosage and administration details:**

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAC chemotherapy (cycles 7-14 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1,2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Ifosfamide is given on day 1 and 2 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

**Dosage and administration details:**

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

**Dosage and administration details:**

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Actinomycin D
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Intravenous use

Dosage and administration details:

VAI chemotherapy (cycles 7-14 at 21-day intervals): Actinomycin D is given on day 1 and 2 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAC chemotherapy (cycles 7-14 at 21-day intervals): Actinomycin D is given on day 1 and 2 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VAC chemotherapy (cycles 7-14 at 21-day intervals): Cyclophosphamide is given on day 1 in a dose of 1500 mg/m<sup>2</sup>/d per cycle.

<b>Arm title</b>	R2loc VAI
------------------	-----------

Arm description:

Patients with localised disease and poor histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have large tumours > 200 mL at diagnosis were included in the risk group High Risk localised disease R2loc.

Patients who were randomized into the R2loc VAI arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of standard chemotherapy VAI (vincristine, actinomycin-D, ifosfamide).

Arm type	Active comparator
Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1, 2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Ifosfamide is given on day 1 and 2 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Actinomycin D
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Intravenous use

Dosage and administration details:

VAI chemotherapy (cycles 7-14 at 21-day intervals): Actinomycin D is given on day 1 and 2 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

<b>Arm title</b>	R2loc Bu-Mel
------------------	--------------

Arm description:

Patients with localised disease and poor histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have large tumours > 200 mL at diagnosis were included in the risk group High Risk localised disease R2loc.

Patients who were randomized into the R2loc Bu-Mel arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by high-dose chemotherapy using busulfan-melphalan with autologous stem cell reinfusion.

Arm type	Experimental
Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1, 2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:	
VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m <sup>2</sup> /d per cycle.	
Investigational medicinal product name	Busulfan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Busulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Busulfan is given on day -6, -5, -4 and -3 before Stem cell reinfusion.

Adults: 0.8 mg/kg body weight (BW), children and adolescents: <9 kg = 1 mg/kg BW, 9-<16 kg = 1.2 mg/kg BW, 16-23 kg = 1.1 mg/kg BW, >23-34 kg = 0.95 mg/kg BW, >34 kg = 0.8 mg/kg BW.

Investigational medicinal product name	Melphalan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Busulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Melphalan is given on day -2 before Stem cell reinfusion (140 mg/m<sup>2</sup> IV infusion, 30 min.).

Investigational medicinal product name	Adult haematopoietic stem cells
Investigational medicinal product code	
Other name	Autologous adult haematopoietic stem cells
Pharmaceutical forms	Suspension for injection
Routes of administration	Intravenous use

Dosage and administration details:

Busulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Stem cell reinfusion (min. 3 x 1000000/kg CD 34+) after busulfan–melphalan Treatment (d 0).

<b>Arm title</b>	R2pulm VAI
------------------	------------

**Arm description:**

Patients with a Ewing sarcoma metastatic to the lungs and/or pleura, but not to any other sites, at the time of diagnosis were included in the risk group High Risk primary lung metastases R2pulm.

Patients who were randomized into the R2pulm VAI arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of standard chemotherapy VAI (vincristine, actinomycin-D, ifosfamide) plus whole lung irradiation.

Arm type	Active comparator
Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1,2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

VAI chemotherapy (cycles 7-14 at 21-day intervals): Ifosfamide is given on day 1 and 2 in a dose of 3.0

g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Actinomycin D
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Intravenous use

Dosage and administration details:

VAI chemotherapy (cycles 7-14 at 21-day intervals): Actinomycin D is given on day 1 and 2 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

<b>Arm title</b>	R2pulm Bu-Mel
------------------	---------------

Arm description:

Patients with a Ewing sarcoma metastatic to the lungs and/or pleura, but not to any other sites, at the time of diagnosis were included in the risk group High Risk primary lung metastases R2pulm. Patients who were randomized into the R2pulm Bu-Mel arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by high dose busulfan-melphalan chemotherapy with autologous stem cell reinfusion.

Arm type	Experimental
Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1, 2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:  
 VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:  
 VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Busulfan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:  
 Busulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Busulfan is given on day -6, -5, -4 and -3 before Stem cell reinfusion.  
 Adults: 0.8 mg/kg body weight (BW), children and adolescents: <9 kg = 1 mg/kg BW, 9-<16 kg = 1.2 mg/kg BW, 16-23 kg = 1.1 mg/kg BW, >23-34 kg = 0.95 mg/kg BW, >34 kg = 0.8 mg/kg BW.

Investigational medicinal product name	Melphalan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:  
 Busulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Melphalan is given on day -2 before Stem cell reinfusion (140 mg/m<sup>2</sup> IV infusion, 30 min.).

Investigational medicinal product name	Adult haematopoietic stem cells
Investigational medicinal product code	
Other name	Autologous adult haematopoietic stem cells
Pharmaceutical forms	Suspension for injection
Routes of administration	Intravenous use

Dosage and administration details:  
 Busulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Stem cell reinfusion (min. 3 x 1000000/kg CD 34+) after busulfan–melphalan Treatment (d 0).

<b>Arm title</b>	R3 VAC
------------------	--------

Arm description:

Patients with metastatic disease not confined to the lungs and/or pleura, i.e. patients with bone metastases, bone marrow metastases or other metastases (e.g. lymph nodes, liver, CNS, etc) with and without additional pulmonary metastases at the time of diagnosis were included in the risk group Very High Risk R3.

Patients who were randomized into the R3 VAC arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of VAC (vincristine, actinomycin-D, cyclophosphamide).

Arm type	Active comparator
Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:  
 VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.  
 VAC chemotherapy (cycles 7-14 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5

mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1,2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Actinomycin D
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Intravenous use

Dosage and administration details:

VAC chemotherapy (cycles 7-14 at 21-day intervals): Actinomycin D is given on day 1 and 2 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VAC chemotherapy (cycles 7-14 at 21-day intervals):Cyclophosphamide is given on day 1 in a dose of 1500 mg/m<sup>2</sup>/d per cycle.

<b>Arm title</b>	R3 Treo-Mel
------------------	-------------

Arm description:

Patients with metastatic disease not confined to the lungs and/or pleura, i.e. patients with bone metastases, bone marrow metastases or other metastases (e.g. lymph nodes, liver, CNS, etc) with and without additional pulmonary metastases at the time of diagnosis were included in the risk group Very High Risk R3.

Patients who were randomized into the R3 Treo-Mel arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by high dose chemotherapy using treosulfan-melphalan and autologous stem cell reinfusion.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Vincristine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Vincristine is given on day 1 in a dose of 1.5 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Ifosfamide is given on day 1,2 and 3 in a dose of 3.0 g/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Doxorubicin is given on day 1, 2 and 3 in a dose of 20 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

VIDE chemotherapy (cycles 1-6 at 21-day intervals): Etoposide is given on day 1, 2 and 3 in a dose of 150 mg/m<sup>2</sup>/d per cycle.

Investigational medicinal product name	Treosulfan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Treosulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion: Treosulfan (12 g/m<sup>2</sup>/dose IV infusion, 2 hours) is given on day -5, -4 and -3 before Stem cell reinfusion.

Investigational medicinal product name	Melphalan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Treosulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Melphalan is given on day -2 before Stem cell reinfusion (140 mg/m<sup>2</sup> IV infusion, 30 min.).

Investigational medicinal product name	Adult haematopoietic stem cells
Investigational medicinal product code	
Other name	Autologous adult haematopoietic stem cells
Pharmaceutical forms	Suspension for injection
Routes of administration	Intravenous use

---

**Dosage and administration details:**

Treosulfan–Melphalan High-Dose Chemotherapy with autologous stem cell reinfusion (cycle 8): Stem cell reinfusion (min. 3 x 1000000/kg CD 34+) after treosulfan–melphalan Treatment (d 0).

---

**Notes:**

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 907 patients were eligible for the study and therefore study patients. Since 466 patients were not eligible for randomization or could not be randomized, only 441 started the randomized study. These patients are reported in the baseline period.

## Baseline characteristics

### Reporting groups

Reporting group title	R1 Add-on
Reporting group description: Patients with localised disease and good histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have small tumours < 200 mL at diagnosis were included in the risk group Standard Risk R1. Patients who were randomized into the R1 Add-on arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of either VAI (vincristine, actinomycin-D, ifosfamide) or VAC (vincristine, actinomycin-D, cyclophosphamide). In addition to induction and maintenance chemotherapy, patients were treated with zoledronic acid (Add-on treatment).	
Reporting group title	R1 No Add-on
Reporting group description: Patients with localised disease and good histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have small tumours < 200 mL at diagnosis were included in the risk group Standard Risk R1. Patients who were randomized into the R1 No Add-on arm received only 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of either VAI (vincristine, actinomycin-D, Ifosfamide) or VAC (vincristine, actinomycin-D, Cyclophosphamide). No additional treatment with zoledronic acid was administered to the patients (No Add-on treatment).	
Reporting group title	R2loc VAI
Reporting group description: Patients with localised disease and poor histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have large tumours > 200 mL at diagnosis were included in the risk group High Risk localised disease R2loc. Patients who were randomized into the R2loc VAI arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of standard chemotherapy VAI (vincristine, actinomycin-D, ifosfamide).	
Reporting group title	R2loc Bu-Mel
Reporting group description: Patients with localised disease and poor histological response at surgery after induction chemotherapy and patients with initial surgery or in whom surgery was not feasible and who have large tumours > 200 mL at diagnosis were included in the risk group High Risk localised disease R2loc. Patients who were randomized into the R2loc Bu-Mel arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by high-dose chemotherapy using busulfan-melphalan with autologous stem cell reinfusion.	
Reporting group title	R2pulm VAI
Reporting group description: Patients with a Ewing sarcoma metastatic to the lungs and/or pleura, but not to any other sites, at the time of diagnosis were included in the risk group High Risk primary lung metastases R2pulm. Patients who were randomized into the R2pulm VAI arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of standard chemotherapy VAI (vincristine, actinomycin-D, ifosfamide) plus whole lung irradiation.	
Reporting group title	R2pulm Bu-Mel
Reporting group description: Patients with a Ewing sarcoma metastatic to the lungs and/or pleura, but not to any other sites, at the time of diagnosis were included in the risk group High Risk primary lung metastases R2pulm. Patients who were randomized into the R2pulm Bu-Mel arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by high dose busulfan-melphalan chemotherapy with autologous stem cell reinfusion.	
Reporting group title	R3 VAC
Reporting group description: Patients with metastatic disease not confined to the lungs and/or pleura, i.e. patients with bone metastases, bone marrow metastases or other metastases (e.g. lymph nodes, liver, CNS, etc) with and without additional pulmonary metastases at the time of diagnosis were included in the risk group Very High Risk R3. Patients who were randomized into the R3 VAC arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by 8 cycles of VAC	

(vincristine, actinomycin-D, cyclophosphamide).

Reporting group title	R3 Treo-Mel
-----------------------	-------------

Reporting group description:

Patients with metastatic disease not confined to the lungs and/or pleura, i.e. patients with bone metastases, bone marrow metastases or other metastases (e.g. lymph nodes, liver, CNS, etc) with and without additional pulmonary metastases at the time of diagnosis were included in the risk group Very High Risk R3.

Patients who were randomized into the R3 Treo-Mel arm received 6 courses of vincristine, ifosfamide, doxorubicin, and etoposide (VIDE) as intensive induction chemotherapy followed by high dose chemotherapy using treosulfan-melphalan and autologous stem cell reinfusion.

Subject analysis set type	Per protocol
---------------------------	--------------

Subject analysis set description:

The per protocol collective is defined as all R3 Treo-Mel patients completing the study without major protocol deviations.

### **Primary: R1: Event-free survival (EFS)**

End point title	R1: Event-free survival (EFS) <sup>[1]</sup>
-----------------	--

End point description:

The primary endpoint of event-free survival (EFS) was estimated according to the method of Kaplan and Meier (1958). EFS time starts at the date of randomisation and ends at the date of first event

(progression of disease, relapse of disease, diagnosis of secondary malignancy, or death of the patient irrespective of its cause) or at the date of the patient's most recent consultation. Patients lost to follow-up without event were censored at the date of their last consultation. Progression of disease is defined as recurrent disease under active oncological therapy. Relapse of disease is defined as recurrent disease in patients with complete clinical remission after completion of active oncological therapy. The Primary Analysis was performed according to the Intention-to-treat (ITT) principle in the full analysis set.

End point type	Primary
----------------	---------

End point timeframe:

From randomisation to first event or last follow-up in case of no event.

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The R2 randomization of the EURO-E.W.I.N.G. 99 trial was continued in the EWING2008 Trial. The EWING2008 R2 data were transferred to the EURO-E.W.I.N.G. 99 data center and was analyzed by the EURO-E.W.I.N.G. Group. The results were already published (see online references).

## Statistical analyses

Statistical analysis title	Final analysis (superiority)
----------------------------	------------------------------

Statistical analysis description:

Because the number of the initially planned number of events (n=146) could not be reached, an adaptive design change was performed based on the data from the 1st interim analysis, according to which only an additional analysis is planned. The conditional rejection error probability (CREP) (Müller & Schäfer 2001) was calculated for each direction of the null hypothesis (superiority of Add-on  $+ = 0.0086$  and inferiority of Add-on  $- = 0.0126$ ). The CREPs were used as new local significance levels.

Comparison groups	R1 Add-on v R1 No Add-on
Number of subjects included in analysis	284
Analysis specification	Pre-specified
Analysis type	superiority <sup>[2]</sup>
P-value	$= 0.0242$ <sup>[3]</sup>
Method	Increment of the logrank test statistic
Parameter estimate	Hazard ratio (HR)
Point estimate	0.735
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.424
upper limit	1.275

Notes:

[2] - In the final analysis the one-sided null hypotheses was tested by calculating the approximately normally distributed independent increment of the logrank test statistic. The independent increment of the logrank test statistic was -1.0987, leading to the one-sided single-stage p-values  $p_{\text{end}+}=0.0242 > 0.0086=+$  and  $p_{\text{end}-}=0.9758 > 0.0126=-$ .

[3] - The independent increment of the logrank test statistic was -1.0987, leading to the one-sided single-stage p-values  $p_{\text{end}+}=0.0242 > 0.0086=+$  and  $p_{\text{end}-}=0.9758 > 0.0126=-$ .

<b>Statistical analysis title</b>	First interim analysis
-----------------------------------	------------------------

Statistical analysis description:

The primary endpoint is event-free survival (EFS) starts at the date of randomization and ends at the date of first compound event (progression of disease, relapse of disease, diagnosis of secondary malignancy, or death of the patient irrespective of its cause) or at the date of the patient's most recent consultation. The EFS was analyzed using the intention-to-treat principle in the full-analysis set. A multiple type 1 error rate (significance level) of  $\alpha = 5\%$  (two-sided) was controlled.

Comparison groups	R1 Add-on (First interim analysis) v R1 No Add-on (First interim analysis)
Number of subjects included in analysis	242
Analysis specification	Pre-specified
Analysis type	superiority <sup>[4]</sup>
P-value	= 0.9058 <sup>[5]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	1.042
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.526
upper limit	2.064

Notes:

[4] - An adaptive two-sided group sequential design with four equally weighted stages using an inverse normal combination function and O'Brien & Fleming boundaries was applied (Wassmer 2006, O'Brien & Fleming 1979). The first interim analysis was performed based on data from 20 March 2017 after observing 33 events.

[5] - Stage I two-sided p-value is reported. Stage I p-value (one-sided) for superiority ( $H_1: HR < 1$ )  $p=0.5471$  and for inferiority ( $H_1: HR > 1$ )  $p=0.4529$ .

<b>Statistical analysis title</b>	Final analysis (inferiority)
-----------------------------------	------------------------------

## Statistical analyses

Statistical analysis title	Final analysis
----------------------------	----------------

Statistical analysis description:

Because the number of the initially planned number of events (n=155) could not be reached, an adaptive design change was performed based on the data from the 1st interim analysis, according to which only an additional analysis is planned. The conditional rejection error probability (CREP) (Müller & Schäfer 2001) was calculated for the one-sided null hypothesis, resulting in  $\alpha=0.0116$ . The CREP was used as new local significance level for the final analysis of the remaining trial.

Comparison groups	R3 Treo-Mel v R3 VAC
Number of subjects included in analysis	109
Analysis specification	Pre-specified
Analysis type	superiority <sup>[9]</sup>
P-value	= 0.1195 <sup>[10]</sup>
Method	Increment of the logrank test statistic
Parameter estimate	Hazard ratio (HR)
Point estimate	0.821
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.532
upper limit	1.268

Notes:

[9] - In the final analysis the one-sided null hypothesis was tested by calculating the approximately normally distributed independent increment of the logrank test statistic (Wassmer 2006). The final analysis was performed on data from 30th June 2019.

[10] - The independent increment of the logrank test statistic was -0.889, leading to the one-sided single-stage p-value  $p_{\text{end}} = 0.1195 > 0.0116 = \alpha$

Statistical analysis title	First interim analysis
----------------------------	------------------------

Statistical analysis description:

The primary endpoint is event-free survival (EFS) starts at the date of randomization and ends at the date of first compound event (progression of disease, relapse of disease, diagnosis of secondary malignancy, or death of the patient irrespective of its cause) or at the date of the patient's most recent consultation. The EFS was analyzed using the intention-to-treat principle in the full-analysis set. A multiple type 1 error rate (significance level) of  $\alpha = 2.5\%$  (one-sided) was controlled.

Comparison groups	R3 VAC (First interim analysis) v R3 Treo-Mel (First interim analysis)
Number of subjects included in analysis	62
Analysis specification	Pre-specified
Analysis type	superiority <sup>[11]</sup>
P-value	= 0.4737 <sup>[12]</sup>
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.979

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.52
upper limit	1.842

Notes:

[11] - An adaptive one-sided group sequential design with four stages using an inverse normal combination function, O'Brien & Fleming boundaries, and equally spaced weights was applied (Wassmer 2006, O'Brien & Fleming 1979).

[12] - Stage I one-sided p-value is reported. The hypotheses that the randomization arm 'R3: Treo-Mel' differs in the full-analysis set from the randomization arm 'R3: VAC' with respect to EFS could not be rejected.

<b>Statistical analysis title</b>	Final analysis (Per protocol)
Comparison groups	R3 VAC (Per Protocol) v R3 Treo-Mel (Per protocol)
Number of subjects included in analysis	87
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.4463
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.83
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.51
upper limit	1.35

## Secondary: R1 trial: Overall survival (OS)

End point title	R1 trial: Overall survival (OS) <sup>[13]</sup>
-----------------	---

End point description:

Overall survival time (OS) starts at the date of randomisation and ends at the date of death of the patient (irrespective of its cause) or at the date of the patient's most recent consultation. Patients lost to follow-up are censored at the date of their last consultation.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomisation to death.

Notes:

[13] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The R2 randomization of the EURO-E.W.I.N.G. 99 trial was continued in the EWING2008 Trial. The EWING2008 R2 data were transferred to the EURO-E.W.I.N.G. 99 data center and was analyzed by the EURO-E.W.I.N.G. Group. The results were already published (see online references).

End point values	R1 Add-on	R1 No Add-on	R1 Add-on (Per protocol)	R1 No Add-on (Per protocol)
Subject group type	Reporting group	Reporting group	Subject analysis set	Subject analysis set
Number of subjects analysed	142	142	101	135
Units: Deaths	13	12	9	10

## Statistical analyses

<b>Statistical analysis title</b>	R1 trial: OS (full analysis set)
Statistical analysis description: Comparison of overall survival between R1: Add-on and R1: No Add-on in the full analysis set (ITT principle).	
Comparison groups	R1 Add-on v R1 No Add-on
Number of subjects included in analysis	284

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

from treatment initiation until 3 months following completion of active oncological therapy.

Adverse event reporting additional description:

Expected toxicities, both severe (CTC grade  $\geq 3$ , hematologic: CTC grade = 4) and non-severe (CTC grade 1-2, hematologic: CTC grade 1-3), were recorded as pre-specified items according to CTCAE in the CRF. Severe toxicities were documented as SAE and non-severe toxicities as non-SAE. Toxicities collected as free text in the CRF were not documented.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	CTCAE
-----------------	-------

Dictionary version	3.0
--------------------	-----

### Reporting groups

Reporting group title	Safety: R1 Add-on
-----------------------	-------------------

Reporting group description:

All randomized patients who received R1 add-on treatment (Safety set, as-treated). In this reporting group, 11 deaths occurred with the following causes: Cancer = 9, Secondary malignancy = 1, Pneumonia = 1. Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

Reporting group title	Safety: R1 no Add-on
-----------------------	----------------------

Reporting group description:

All randomized patients who received R1 no Add-on treatment (Safety set, as-treated). In this reporting group, 14 deaths occurred with the following causes: Cancer = 14. Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

Reporting group title	Safety: R2loc VAI
-----------------------	-------------------

Reporting group description:

All randomized patients who received R2loc VAI treatment (Safety set, as-treated). In this reporting group, 2 deaths occurred with the following causes: Cancer = 2. Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

Reporting group title	Safety: R2loc Bu-Mel
-----------------------	----------------------

Reporting group description:

All randomized patients who received R2loc Bu-Mel treatment (Safety set, as-treated). In this reporting group, 1 death occurred with the following cause: Cancer = 1. Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

Reporting group title	Safety: R2pulm VAI
-----------------------	--------------------

Reporting group description:

All randomized patients who received R2pulm VAI treatment (Safety set, as-treated). In this reporting group, 4 deaths occurred with the following causes: Cancer = 4. Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

Reporting group title	Safety: R2pulm Bu-Mel
-----------------------	-----------------------

Reporting group description:

All randomized patients who received R2pulm Bu-Mel treatment (Safety set, as-treated). In this reporting group, 2 deaths occurred with the following causes: Cancer = 1, Pulmonary veno-occlusive disease (Treatment-related) = 1. Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

Reporting group title	Safety: R3 VAC
-----------------------	----------------

Reporting group description:

All randomized patients who received R3 VAC treatment (Safety set, as-treated). In this reporting group, 35 deaths occurred with the following causes: Cancer = 34, Acute pulmonary embolism = 1.

Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

Reporting group title	Safety: R3 Treo-Mel
-----------------------	---------------------

Reporting group description:

All randomized patients who received R3 Treo-Mel treatment (Safety set, as-treated). In this reporting group, 25 deaths occurred with the following causes: Cancer = 24, Secondary malignancy = 1. Because the deaths could not be assigned to any specific toxicity, 0 was entered under „Serious adverse event details and values“ for both „Fatalities number“ and „Fatalities causally related to treatment number“.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 February 2011	<ul style="list-style-type: none"> <li>- Member states were added: Belgium, Czech Republic and Spain joined study participation</li> <li>- Member state withdrawal trial participation: Slovenia</li> <li>- Changes in Datamanagement: Electronic data capture system is established.</li> <li>- Note regarding treatment with Treosulfan was added: In small children &lt;20 kg BW the dose of treosulfan should be calculated per kg BW. <math>1 \text{ m}^2 \text{ BSA} = 30 \text{ kg BW}</math></li> <li>- Changes in drug supply: In Germany study sites will be supplied with commercial drug from Novartis until 31 Dec 2011</li> <li>- Changes in dosing of obese patients to ensure safety: In patients with <math>\text{BSA} &gt; 2 \text{ m}^2</math> dosing of chemotherapy may have to be adjusted to the individual patient's requirements and tolerance. Note: Observe maximum single dose for vincristine: 2 mg.</li> <li>- Changes (due to typing error) in reportable AEs: Adverse Events not reportable on an SAE form are to be reported on the appropriate CRF (toxicity check list). This include: Neutropenia and neutropenic fever (CTCAE°1-4). Haematological toxicity: haemoglobin, WBC, granulocytes, platelets (CTCAE°1-4).</li> </ul>
23 April 2013	<ul style="list-style-type: none"> <li>- Changes in inclusion of patients: The option of registering patients to be observed is added into study design. These patients do not meet all inclusion criteria or meet one or more exclusion criteria.</li> <li>- Member states were added to participate in trial for recruiting patients to the R2 arm of the trial: France, UK, USA</li> <li>- Member state was added: Hungary joined trial participation</li> <li>- Changes in Treosulfan IV administration: Infusion time was extended to 2 h</li> <li>- Changes in drug supply: In Germany study sites will be supplied with commercial drug from Novartis until 30 Sep 2013</li> <li>- Clarification of drug administration which is relevant for patient safety: If SF remains below 29% then omit DOX and substitute ACT 0.75 mg/m<sup>2</sup>/d (d1, d2) (IV push) (1.5 mg/m<sup>2</sup>/cycle) (max. single dose/d: 1.5 mg/d).</li> </ul>
18 September 2013	<ul style="list-style-type: none"> <li>- Member states were added: Australia and New Zealand joined trial participation.</li> <li>- Transformation of the original group sequential design into the corresponding inverse normal design: For the randomized risk groups R1 and R3 will be conducted, with 3 planned interim analyses and early stopping rules using the O'Brien and Fleming Design. For risk groups R2loc and R2pulm three interim analyses are intended to be performed using an inverse normal design corresponding to an equally spaced four step group sequential design according to O'Brien &amp; Fleming (Wassmer 2006, O'Brien &amp; Fleming 1979). After each interim analysis a data dependent sample size recalculation may be performed. Then, the accrual period, the observation time and the schedule of the next interim and final analysis (required number of events) can be adapted. If no adaptations are performed, the inverse normal design coincides with the underlying group sequential design.</li> <li>- Recommendation added for dose modifications of elderly patients to enhance patient's safety: Chemotherapy may have to be adjusted individual patient's requirements. In these cases the EWING2008 Head Office should be contacted.</li> <li>- Recommendation added for dose modifications in case of significant toxicities to enhance patient's safety. Dose modifications for ifosmamide, cyclophosphamide and actinomycin D</li> </ul>

08 December 2014	<ul style="list-style-type: none"> <li>- Member state was added: Finland joined trial participation.</li> <li>- Member state withdrawal trial participation: Spain</li> <li>- Changes in sample size, anticipated accrual time and recruitment period for risk groups: Recalculation of R2 (R2loc and R2pulm) with respect to conditional power was performed.</li> <li>- Clarification for patients who are not randomised and do not receive the standard treatment was added: additional information for was provided each risk group in a guideline</li> <li>- Changes in drug supply: In Germany study sites will be supplied with commercial drug from Novartis until 31 Dec 2016</li> <li>- SPC for all drugs are updated</li> </ul>
19 February 2016	<ul style="list-style-type: none"> <li>- Changes in study organisation: Retirement of Prof. Juergens; Prof. Dirksen is the new Coordinating Investigator</li> <li>- Changes in planned study period: The overall study duration (incl. follow-up) was extended by one year as the accrual rate into the trials was slightly lower as expected.</li> <li>- Member state was added: Lithuania joined trial participation</li> <li>- Member state withdrawal trial participation: Slovakia</li> <li>- Changes in recruitment cohort: The study committee decided to close the R2loc arm and the R2pulm arm because of low accrual rate into the randomized arms. The study will be analyzed.</li> <li>- Changes in medication of Standard Risk R1 patients: Fenretinide will not be available, therefore the arm, that included fenretinide was deleted from the protocol for clarification. This results also on changes of the primary and secondary objectives and of the sample size.</li> <li>- Changes in inclusion criteria: for Germany patients either sex, age &lt;48 months may be included.</li> <li>- Changes in Key time points: Response evaluation prior to add-on in R1 was changed to optional at the respective time points.</li> <li>- Changes in the statistical analysis: Transformation of the original group sequential design into the corresponding inverse normal design.</li> </ul>
06 July 2018	<ul style="list-style-type: none"> <li>- Update of trial conduct: R1 and R3 accrual was discontinued on April 1st 2018</li> <li>- Statistical design has been adapted for final analysis: Adaption of the statistical analysis strategy for the final analysis of the primary endpoint, because the required number of events for the upcoming interim/final analyses cannot be reached. Due to the statistical design change, no further interim analyses will be performed. In the R1 and R3 trial the final analysis will be performed at the end of the trial.</li> <li>- Changes in drug supply: Zoledronic acid is no longer supplied by Novartis</li> <li>- Prophylaxis of ifosfamide-induced encephalopathy was changed: Methylene blue (50mg) should be given 4 times daily</li> </ul>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
