

Clinical trial results:

A phase III trial of vinflunine + capecitabine versus capecitabine alone in patients with advanced breast cancer previously treated with or resistant to an anthracycline and who are taxane resistant

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 March 2013
Is this the analysis of the primary completion data?	Yes
Primary completion date	20 December 2011
Global end of trial reached?	Yes
Global end of trial date	18 February 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

This study investigated the comparative efficacy (progression free survival (primary criteria), response to treatment and disease control parameters (secondary criteria)) of vinflunine plus capecitabine versus capecitabine alone in patients with metastatic breast cancer who were previously treated with or resistant to an anthracycline and who were taxane resistant.

Protection of trial subjects:

The trial was conducted according to Good Clinical Practice (CPMP/ICH/135/95), the Declaration of Helsinki and its subsequent amendments thereto and local legal regulations. The study protocol and the informed consent form were submitted for approval to Ethics Committees before the study set up according to the national regulations. The patient underwent a health assessment at the start of the study and remained under regular medical control during the whole study.

Background therapy:

Antiemetic prophylaxis (dexamethasone 8mg or equivalent just before each infusion) and constipation prophylaxis (dietary measures and laxatives from day1 to 5 of each cycle)

Evidence for comparator: -

Actual start date of recruitment	06 May 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 47
Country: Number of subjects enrolled	Spain: 36
Country: Number of subjects enrolled	United Kingdom: 30

Worldwide total number of subjects	770
EEA total number of subjects	274

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	669
From 65 to 84 years	101
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

From 6th of May 2009 (First patient enrolled) up to 25th May 2011 (last patient enrolled), 770 patients were enrolled from 129 active centres in 21 countries. Patients were to be treated until disease progression, unacceptable toxicity or patient's request. After the study treatment discontinuation, patients were to be followed until death.

Pre-assignment

Screening details:

- 21 years and older female patients, with an histologically/cytologically confirmed breast carcinoma, documented locally recurrent or metastatic disease not amenable to curative surgery or radiotherapy
- Having received at least one prior chemotherapy (neo/adjuvant setting)
- previously treated with or resistant to anthracycline and taxane

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Capecitabine single agent

Arm description: -

Arm type	Active comparator
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	Xeloda
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received: Capecitabine at the dose of 1250 mg/m² per os twice per day each morning and each evening for 14 consecutive days beginning on day 1 of each cycle repeated every 3 weeks (self-administered).

Arm title	Vinflunine + capecitabine
------------------	---------------------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Capecitabine
Investigational medicinal product code	
Other name	Xeloda®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Patients received:

Capecitabine at the dose of 825mg/m² per os twice per day each morning and each evening for 14 consecutive days beginning on day 1 of each cycle repeated every 3 weeks (self-administered).

Investigational medicinal product name	Vinflunine
Investigational medicinal product code	L00070 IN
Other name	Javlor
Pharmaceutical forms	Concentrate and solvent for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Patients received (in combination with capecitabine)

- Vinflunine at the dose of 280 mg/m² and as a 20-minute IV. infusion on day 1 of each cycle repeated every 3 weeks.

Number of subjects in period 1	Capecitabine single agent	Vinflunine + capecitabine
Started	386	384
cut-off date: 20 december 2011	144	143
cut-off date: 15 March 2013	60	49
Completed	60	49
Not completed	326	335
death	319	324
Lost to follow-up	7	11

Reporting group description: -	

Primary: Progression Free survival (PFS)

End point title	Progression Free survival (PFS)
End point description: PFS is defined as time from date of randomization to date of the first documentation of objective tumor progression (according to the IRC and based on RECIST version 1.1) or death due to any cause The PFS was primarily analysed in the Intent-to-treat (ITT) population. Patients lost to follow-up, or without a known record of progression or death at time of analysis had the progression-free survival censored at the date of last tumour assessment or the date of last contact of a follow-up showing no progression, whichever occurs last.	
End point type	Primary
End point timeframe: Baseline up to first cut-off date (20 december 2011)	

End point values	Capecitabine single agent	Vinflunine + capecitabine		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	386 ^[1]	384 ^[2]		
Units: Months				
median (confidence interval 95%)	4.3 (4.1 to 5.6)	5.6 (5.3 to 6.3)		

Notes:

[1] - 312 events -74 censored patients

[2] - 312 events- 70 censored

Statistical analyses

Statistical analysis title	Primary efficacy analysis
Statistical analysis description: The final analysis of progression free survival was conducted once the required number of events(615 progressions or deaths) was reached. using the IRC assessment of date of progressions following the blinded radiological and clinical review of data. Kaplan-Meier curves and life tables by treatment arm were provided. A stratified Cox proportional model was used to compare the two treatment arms tak	
Comparison groups	Vinflunine + capecitabine v Capecitabine single agent
Number of subjects included in analysis	770
Analysis specification	Pre-specified
Analysis type	superiority ^[3]
P-value	= 0.0426 ^[4]
Method	Logrank
Parameter estimate	Hazard ratio (HR)
Point estimate	0.84

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.71
upper limit	0.99

Notes:

[3] - The primary efficacy analysis of the PFS was performed in the intent-to-treat (ITT) population

[4] - According to the IRC, the median PFS was of 5.6 months for the VFL+CAPE arm and 4.3 months for the CAPE single agent arm and the difference was statistically significant (HR= 0.84, 95%CI 0.71-0.99; P=0.0426)

Secondary: Overall survival (OS)

End point title	Overall survival (OS)
-----------------	-----------------------

End point description:

The overall survival (OS) was defined as the duration between the date of randomisation and the date of death from any cause. The OS analysis was performed in the ITT population and the eligible and perprotocol populations once the required number of events (631 deaths) was observed. Patients lost to follow-up, or without a known record of death at time of analysis had the OS censored at the date of last contact.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to the cut-off date set on 15 March, 2013 (final analysis). At the cut-off date 83.5% of all patients had progressed or died (death as first event)

End point values	Capecitabine single agent	Vinflunine + capecitabine		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	386 ^[5]	384 ^[6]		
Units: Months				
median (confidence interval 95%)	11.7 (10.8 to 13.5)	13.9 (11.9 to 15)		

Notes:

[5] - 319 events-67 censored

[6] - 324 events 60 censored

Statistical analyses

Statistical analysis title	Overall survival analysis
----------------------------	---------------------------

Statistical analysis description:

OS is defined as time from date of randomization to date of death due to any cause. The final analysis of survival was conducted in the ITT population after 643 deaths have been observed (83.5% of all patients, 84.4% in the VFL+CAPE arm and 82.6% in the CAPE arm respectively).

Comparison groups	Capecitabine single agent v Vinflunine + capecitabine
Number of subjects included in analysis	770
Analysis specification	Pre-specified
Analysis type	superiority ^[7]
P-value	= 0.7657 ^[8]
Method	stratified Log rank test
Parameter estimate	Hazard ratio (HR)
Point estimate	0.98

Confidence interval	
level	95 %
sides	2-sided
lower limit	0.83
upper limit	1.15

Notes:

[7] - To describe time dependent parameters, Kaplan-Meier curves and life tables by treatment arm are provided. Confidence intervals on the median were calculated using the Brookmeyer and Crowley method. Hazard ratio and 95% confidence intervals are reported. A stratified Cox proportional model was performed to compare the two treatment arms taking into account the stratification factors (except centre) used at the time of randomisation.

[8] - The IRC assessed ORR was higher in the VFL+CAPE arm compared to the CAPE arm in ITT (and in all studied populations) even though this difference (+2.2 months) did not reach statistical significance.

Secondary: Overall Response rate (ORR=CR+PR)

End point title	Overall Response rate (ORR=CR+PR)
-----------------	-----------------------------------

End point description:

ORR defined as documentation of complete or partial response that was subsequently confirmed to first documentation of disease progression or to death due to any cause, whichever occurred first.

End point type	Secondary
----------------	-----------

End point timeframe:

From baseline to 1st cut-off date

End point values	Capecitabine single agent	Vinflunine + capecitabine		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	386	384		
Units: percent				
median (confidence interval 95%)	17.9 (14.2 to 22.1)	22.9 (18.8 to 27.5)		

Statistical analyses

Statistical analysis title	Overall response rate at 1st cut off date
----------------------------	---

Statistical analysis description:

The analyses of tumour response were performed in the ITT population and in the population evaluable for response in the two treatment. Tumour response rate (overall response rate, ORR) defined as the proportion of patients who achieved a complete response (CR) or partial response (PR) as best overall (across all time points) response from the date of randomisation until disease progression but within 30 days from the last administration.

Comparison groups	Capecitabine single agent v Vinflunine + capecitabine
Number of subjects included in analysis	770
Analysis specification	Pre-specified
Analysis type	superiority ^[9]
P-value	= 0.103 ^[10]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Median difference (final values)

Notes:

[9] - The overall response rate (ORR) was first evaluated according to IRC and compared between the two arms with a Cochran-Mantel-Haenszel test stratified on the stratification factors at randomisation (except centre). Furthermore, the ORR was estimated

[10] - ORR was higher in the VFL+CAPE arm compared to the CAPE arm in all studied populations even though this difference did not reach statistical significance

Secondary: Disease Control rate

End point title	Disease Control rate
End point description:	
Disease control rate defined (DCR) as the proportion of patients who achieved at least a stabilisation of the disease not counting patients with only non-measurable disease at baseline and best overall response of non-CR/non-PD.	
End point type	Secondary
End point timeframe:	
from Baseline to first cut-off date	

End point values	Capecitabine single agent	Vinflunine + capecitabine		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	386	384		
Units: percent				
median (confidence interval 95%)	47.9 (42.9 to 53)	57.3 (52.2 to 62.3)		

Statistical analyses

Statistical analysis title	disease control rate analysis
Statistical analysis description:	
Disease control rate defined (DCR) as the proportion of patients who achieved at least a stabilisation of the disease not counting patients with only non-measurable disease at baseline and best overall response of non-CR/non-PD.	
Comparison groups	Capecitabine single agent v Vinflunine + capecitabine
Number of subjects included in analysis	770
Analysis specification	Pre-specified
Analysis type	superiority ^[11]
P-value	= 0.0089 ^[12]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Median difference (final values)

Notes:

[11] - The 95% confidence interval for proportions was computed following the exact method. Stratified analyses were performed using a Cochran-Mantel-Haenszel

[12] - The DCR as per IRC in the ITT population was significantly increased (+9.4%; p=0.0089) in the VFL+CAPE arm compared to the CAPE arm (57.3% and 47.9% respectively)

Secondary: Duration of response

End point title	Duration of response
End point description:	
Measured from the first time that measurement criteria were first met for objective response (documented CR or PR) until recurrence/progression or death whatever the cause.	
End point type	Secondary
End point timeframe:	
from Baseline to cut-off date	

End point values	Capecitabine single agent	Vinflunine + capecitabine		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	386	384		
Units: Months				
median (confidence interval 95%)	5.5 (4.1 to 6.9)	8.4 (4.9 to 9.3)		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

TEAEs are reported from time of first dose of study treatment up to 30 days after last dose of study treatment at the exceptions of SAEs occurring after discontinuation and start of a further treatment

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in 1 subject and as nonserious in another. Specific AE tables were generated separately as per EU format. We report here all on study SAEs and only Treatment related AEs by SOC and PT (PT ≥ 1%)

Assessment type	Systematic
