Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000455-PIP02-10
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 January 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 January 2022
Global end of trial reached?	Yes
Global end of trial date	21 January 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial is to evaluate the efficacy of vortioxetine 10 milligrams (mg)/day and 20 mg/day versus placebo after 8 weeks of treatment on depressive symptoms in children with a Diagnostic and Statistical Manual of Mental Disorders, 5th Edition (DSM-5®) diagnosis of MDD.

Protection of trial subjects:

This study was conducted in compliance with Good Clinical Practice and in accordance with the ethical principles described in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 May 2016
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 22
Country: Number of subjects enrolled	Canada: 6
Country: Number of subjects enrolled	Colombia: 144
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	Estonia: 8
Country: Number of subjects enrolled	Spain: 12
Country: Number of subjects enrolled	France: 12
Country: Number of subjects enrolled	Hungary: 3
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	Latvia: 14
Country: Number of subjects enrolled	Mexico: 109
Country: Number of subjects enrolled	Poland: 26
Country: Number of subjects enrolled	Serbia: 26
Country: Number of subjects enrolled	Russian Federation: 93
Country: Number of subjects enrolled	Ukraine: 17
Country: Number of subjects enrolled	United States: 179
Country: Number of subjects enrolled	South Africa: 1
Worldwide total number of subjects	683
EEA total number of subjects	107

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	683
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study included 2 periods: single-blind (SB) (treatment with standardized brief psychosocial intervention [BPI] and placebo) and double-blind (DB) (treatment with BPI and placebo, vortioxetine 10 mg/day, vortioxetine 20 mg/day, or fluoxetine 20 mg/day).

Pre-assignment

Screening details:

Prior to the interim analysis, participants were randomized in a 1:1:1:1 ratio to placebo, vortioxetine 10 mg/day, vortioxetine 20 mg/day, or fluoxetine 20 mg/day. After interim analysis, participants were randomized in a 1:1:1 ratio to placebo, vortioxetine 10 mg/day, or vortioxetine 20 mg/day.

Period 1

Period 1 title	Single-Blind Phase (4 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Arms

Arm title	Single-Blind: Placebo
-----------	-----------------------

Arm description:

Participants received BPI (3 sessions) and placebo capsules orally once daily for 4 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo capsule was administered per schedule specified in the arm description.

Number of subjects in period 1 ^[1]	Single-Blind: Placebo
Started	677
Received at least 1 dose of study drug	677
Completed	540
Not completed	137
Consent withdrawn by subject	15
Failure to meet randomization criteria	85
Adverse event, non-fatal	2
Non-compliance with study drug	3
Other than specified	20
Lost to follow-up	1
Lack of efficacy	8

Protocol deviation	3
--------------------	---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: A total of 683 participants were enrolled, out of which 6 were not treated.

Period 2

Period 2 title	Double-Blind Phase (8 Weeks)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Double-Blind: Placebo

Arm description:

Participants received placebo capsules orally once daily for 8 weeks. Participants received 2 sessions of BPI also.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Placebo capsule was administered per schedule specified in the arm description.

Arm title	Double-Blind: Vortioxetine 10 mg
------------------	----------------------------------

Arm description:

Participants initiated treatment with vortioxetine capsules 5 mg/day orally for 2 days and thereafter they received 10 mg/day for up to Week 8. Based on the tolerability, vortioxetine dose could be reduced by 5 mg/day at Week 4. Participants received 2 sessions of BPI also.

Arm type	Experimental
Investigational medicinal product name	Vortioxetine
Investigational medicinal product code	
Other name	Brintellix ®, Lu AA21004
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Vortioxetine was administered per dose and schedule specified in the arm description.

Arm title	Double-Blind: Vortioxetine 20 mg
------------------	----------------------------------

Arm description:

Participants initiated treatment with vortioxetine capsules 5 mg/day orally for 2 days followed by 10 mg/day for 2 days and 15 mg/day for 2 days, and thereafter they received vortioxetine 20 mg/day for up to Week 8. Based on the tolerability, vortioxetine dose could be reduced by 5 mg/day at Week 4. Participants received 2 sessions of BPI also.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Vortioxetine
Investigational medicinal product code	
Other name	Brintellix ®, Lu AA21004
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Vortioxetine was administered per dose and schedule specified in the arm description.	
Arm title	Double-Blind: Fluoxetine 20 mg

Arm description:

Participants initiated treatment with fluoxetine 10 mg/day orally for 6 days and thereafter they received 20 mg/day. for up to Week 8. Based on the tolerability, fluoxetine dose could be reduced by 10 mg/day at Week 4. Participants received 2 sessions of BPI also.

Arm type	Active comparator
Investigational medicinal product name	Fluoxetine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Fluoxetine was administered per dose and schedule specified in the arm description.

Children Depression Rating Scale - Revised (CDRS-R) Total Score			
The CDRS-R was rated by a clinician following interviews with the child and parent and consisted of 17 items out of which 3 items rated nonverbal observations (listless speech, hypoactivity, and depressed affect). Fourteen items were rated on a 7-point scale from 1 to 7, and 3 items (sleep disturbance, appetite disturbance, and listless speech) were scored on a 5-point scale from 1 to 5. A rating of 1 indicated normal functioning and a higher number indicated a greater degree of depression. The total score ranged from 17 (normal) to 113 (severe depression).			
Units: units on a scale			
arithmetic mean	63.4		
standard deviation	± 9.12	-

Secondary: Change From Baseline in CDRS-R Subscores (Mood, Somatic, Subjective, and Behaviour) at Weeks 2, 4, 6, and 8 of Phase B

End point title	Change From Baseline in CDRS-R Subscores (Mood, Somatic, Subjective, and Behaviour) at Weeks 2, 4, 6, and 8 of Phase B
-----------------	--

End point description:

CDRS-R consisted of 17 items. Fourteen items were rated on a 7-point scale from 1 to 7, and 3 items (sleep disturbance, appetite disturbance, and listless speech) were scored on a 5-point scale from 1 to 5. Four subscores were defined based on the CDRS-R: Mood: sum of items 8, 11, 14, 15; score range 4 to 28, Somatic: sum of items 4, 5, 6, 7, 16, 17; score range 6 to 36, Subjective: sum of items 9, 10, 12, 13; score range 4 to 28, and Behaviour: sum of items 1, 2, 3; score range 3 to 21. Higher scores indicated the most severe measure of depression. FAS: all participants randomized to the DB, 8-week treatment period (Phase B) who took at least 1 dose of DB study drug and who had a valid baseline assessment and at least 1 valid post-baseline assessment of CDRS-R total score. Overall number of participants analyzed = participants evaluated for this endpoint. n = participants evaluable for specified categories.

Secondary: Percentage of Participants With CDRS-R Remission

End point title	Percentage of Participants With CDRS-R Remission
End point description:	
CDRS-R remission was defined as a CDRS-R total score ≤ 28 . The CDRS-R consisted of 17 items out of	

which 3 items rated nonverbal observations. Fourteen items were rated on a 7-point scale from 1 to 7, and 3 items (sleep disturbance, appetite disturbance, and listless speech) were scored on a 5-point scale from 1 to 5. A rating of 1 indicated normal functioning and a higher number indicated a greater degree of depression. The total score ranged from 17 (normal) to 113 (severe depression). FAS included all participants randomized to the DB, 8-week treatment period (Phase B) who took at least 1 dose of DB study drug and who had a valid baseline (Week 4 of Phase A) assessment and at least 1 valid post-baseline assessment of the CDRS-R total score. Overall number of participants analyzed = participants evaluated for this outcome measure. n = participants evaluable at specified timepoint.

Secondary: Change From Baseline in General Behaviour Inventory (GBI) Depression Subscale Score, Using the 10-Item Depression Subscale Assessed by Parent (PGBI-10D) and Child (CGBI-10D) at Weeks 2, 4, 6, and 8 of Phase B

End point title	Change From Baseline in General Behaviour Inventory (GBI) Depression Subscale Score, Using the 10-Item Depression Subscale Assessed by Parent (PGBI-10D) and Child (CGBI-10D) at Weeks 2, 4, 6, and 8 of Phase B
-----------------	--

End point description:

The GBI 10-item depression scale was developed to screen for depressive symptoms in children and adolescents. Two versions of the GBI 10-item depression scale were used, the child rated version (CGBI) and the parent rated version (PGBI). The 10 depression items were rated on a 4-point scale from 0 (never or hardly ever) to 3 (very often or almost constantly). The total score ranged from 0 to 30, with higher scores indicating greater pathology. FAS included all participants randomized to the DB, 8-week treatment period (Phase B) who took at least 1 dose of DB study drug and who had a valid baseline (Week 4 of Phase A) assessment and at least 1 valid post-baseline assessment of the CDRS-R total score. Overall number of participants analyzed = participants evaluated for this outcome measure. n = participants evaluable for specified categories.

The PedsQL™ VAS is designed to measure at-that-moment functioning in children and adolescents. The PedsQL VAS consists of 6 domains: anxiety, sadness, anger, worry, fatigue and pain using visual analogue scales. The functionality for each domain is measured on a 10 cm line with a happy face at one end and a sad face at the other (0-10 points). The participants are asked to mark on the line how they feel. A lower value represents a better outcome. FAS included all participants randomized to the DB, 8-week treatment period (Phase B) who took at least 1 dose of DB study drug and who had a valid baseline (Week 4 of Phase A) assessment and at least 1 valid post-baseline assessment of the CDRS-R total score. Overall number of participants analyzed = participants evaluated for this outcome measure. n = participants evaluable at specified timepoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to Week 16

Adverse event reporting additional description:

All-patients-treated set Phase A (APTS_A) included all participants enrolled to the 4-week Single-blind period (Phase A) who received at least 1 dose of study drug. All-patients-treated set Phase B (APTS) included all participants randomized to the double-blind, 8-week treatment period (Phase B) who took at least 1 dose of double-blind study drug.

Reporting groups

Reporting group title	Single-Blind: Placebo
-----------------------	-----------------------

Reporting group description:

Participants received BPI (3 sessions) and placebo capsules orally once daily for 4 weeks.

Reporting group title	Double-Blind: Placebo
-----------------------	-----------------------

Reporting group description:

Participants received placebo capsules orally once daily for 8 weeks. Participants received 2 sessions of BPI also.

Reporting group title	Double-Blind: Vortioxetine 10 mg
-----------------------	----------------------------------

Reporting group description:

Participants initiated treatment with vortioxetine capsules 5 mg/day orally for 2 days and thereafter they received 10 mg/day for up to Week 8. Based on the tolerability, vortioxetine dose could be reduced by 5 mg/day at Week 4. Participants received 2 sessions of BPI also.

Reporting group title	Double-Blind: Vortioxetine 20 mg
-----------------------	----------------------------------

Reporting group description:

Participants initiated treatment with vortioxetine capsules 5 mg/day orally for 2 days followed by 10 mg/day for 2 days and 15 mg/day for 2 days, and thereafter they received vortioxetine 20 mg/day for up to Week 8. Based on the tolerability, vortioxetine dose could be reduced by 5 mg/day at Week 4. Participants received 2 sessions of BPI also.

Reporting group title	Double-Blind: Fluoxetine 20 mg
-----------------------	--------------------------------

Reporting group description:

Participants initiated treatment with fluoxetine 10 mg/day orally for 6 days and thereafter they received 20 mg/day for up to Week 8. Based on the tolerability, fluoxetine dose could be reduced by 10 mg/day at Week 4. Participants received 2 sessions of BPI also.

Metabolism and nutrition disorders			
Decreased appetite			
subjects affected / exposed	2 / 153 (1.31%)	3 / 83 (3.61%)	
occurrences (all)	2	4	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 August 2018	Due to recruitment difficulties modified the study design to include an interim analysis to potentially stop the study early for either efficacy or futility. The interim analysis was performed when at least 240 randomized participants had either completed or been withdrawn from the study. If it was planned to continue the study after the interim analysis, the study would include only 3 arms.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
