Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 December 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	24 February 2014
Global end of trial reached?	Yes
Global end of trial date	08 June 2015
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

Comparar la incidencia de diabetes de novo e intolerancia a la glucosa post-trasplante renal de un régimen inmunosupresor basado en Tacrolimus (Tacro) y supresión rápida de esteroides frente a Tacro o CsA con dosis reducidas de esteroides y supresión a los 6 meses, en pacientes con riesgo elevado de desarrollar DMPT.

Protection of trial subjects:

This is a Phase 4 RCT and all participants received standard of care to minimize pain and stress. In addition, a Contracted Insurance Policy was operative during the trial.

Background therapy:

Immunosuppressants apart from the calcineurin inhibitor (corticosteroids and mycophenolate mofetil); CMV prophylaxis (valganciclovir), Pneumocystis jirovecii prevention (cotrimoxazole), antihypertensives (RAS inhibitors), lipid-lowering drugs (statins).

Evidence for comparator:

Cyclosporine A (CsA) is less diabetogenic than Tacrolimus, specifically in renal transplant recipients at risk of post-transplant diabetes (older age, insulin resistance phenotype). In addition, early corticosteroid withdrawal has been shown to reduce the incidence of post-transplant diabetes in patients treated with Tacrolimus. We investigated whether CsA or Tacrolimus with rapid steroid withdrawal, are superior in terms of one-year post-transplant incidence of diabetes, than Tacrolimus and corticosteroid minimization.

Actual start date of recruitment	23 February 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 128
Worldwide total number of subjects	128
EEA total number of subjects	128

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	85
From 65 to 84 years	43
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Eight transplant centers in Spain participated in the study, which began on February 23, 2010. The Safety Committee decided to stop recruitment in the intermediate analysis but continue with the patients already recruited until the end of the study. Therefore, until February 5, 2014, a total of 128 patients were recruited.

Pre-assignment

Screening details:

-Assessed for eligibility(n = 211):
Scheduled delay of CNI initiation n = 51
Logistic problems n = 26

Randomized(n = 134)

Excluded: Error in the assigned study medication n = 1; Unjustified change of study medication n = 1;
Randomized but not transplanted n = 1; Violation of I.C. n = 3

-Randomized and included (n = 128)

Period 1

Period 1 title	Overall Trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Tac-SW

Arm description:

Tacrolimus-based immunosuppression and rapid steroid withdrawal (SW) within 1 week (Tac-SW)
Basiliximab induction. Tacrolimus plus Mycophenolate mofetil (MMF), and corticosteroids with rapid withdrawal after one week.

Arm type	Experimental
Investigational medicinal product name	Tacrolimus-based immunosuppression and rapid steroid withdrawal
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet, Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Tac-SW arm: tacrolimus (Prograf) 0.15 mg/kg per day p.o. in 2 separate doses to maintain trough levels of 8 to 12 ng/ml in the first month, and mycophenolate mofetil (MMF; Cell Cept) 2 g/d p.o. Methylprednisolone 0.5 g i.v. intraoperatively and 125 mg on day 1; prednisone 30 mg p.o. on days 2 and 3, 20 mg on day 4, 15 mg on day 5, 10 mg on day 6, 5 mg on day 7, and then discontinuation.

Arm title	Tac-SM
------------------	--------

Arm description:

Tacrolimus with steroids minimization (Tac-SM)
Basiliximab induction. Tacrolimus plus Mycophenolate mofetil (MMF) and low-dose corticosteroids for 6 months with subsequent removal

Arm type	Active comparator
Investigational medicinal product name	Tacrolimus with Steroid Minimization
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard, Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Tac-SM arm: tacrolimus and MMF following the same schedule as in arm 1. Intraoperative and day 1 methyl-prednisolone as in arm 1; prednisone 0.3 mg/kg per day p.o. from day 2 to 7 (never >20 mg/d), 0.2 mg/kg per day from day 8 to 14 (never >15 mg/d), 0.15 mg/kg per day from day 15 to 21 (never >10 mg/d), 0.1 mg/kg per day from day 22 to 28 (never >7.5 mg/d), and then 5 mg/d until 5 months, with subsequent gradual discontinuation over 4 weeks.

Arm title	CsA-SM
------------------	--------

Arm description:

CsA with steroid minimization (CsA-SM)
Basiliximab induction. Cyclosporin A (CsA) plus Mycophenolate mofetil (MMF) and low-dose corticosteroids for 6 months with subsequent removal

Arm type	Experimental
Investigational medicinal product name	Cyclosporine A with Steroid Minimization
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft, Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

CsA-SM arm: Cyclosporine A microemulsion (Neoral) (CsA) 5 mg/kg per day p.o. to maintain C0 levels of 150–200 ng/ml the first month, and MMF and steroids following the same schedule as arm 2.

Investigational medicinal product name	Tacrolimus-based immunosuppression and rapid steroid withdrawal
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard, Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Tac-SW arm: tacrolimus (Prograf) 0.15 mg/kg per day p.o. in 2 separate doses to maintain trough levels of 8 to 12 ng/ml in the first month, and mycophenolate mofetil (MMF; Cell Cept) 2 g/d p.o. Methyl-prednisolone 0.5 g i.v. intraoperatively and 125 mg on day 1; prednisone 30 mg p.o. on days 2 and 3, 20 mg on day 4, 15 mg on day 5, 10 mg on day 6, 5 mg on day 7, and then discontinuation.

Number of subjects in period 1	Tac-SW	Tac-SM	CsA-SM

Baseline characteristics

Reporting groups

Reporting group title	Tac-SW
Reporting group description: Tacrolimus-based immunosuppression and rapid steroid withdrawal (SW) within 1 week (Tac-SW) Basiliximab induction. Tacrolimus plus Mycophenolate mofetil (MMF), and corticosteroids with rapid withdrawal after one week.	
Reporting group title	Tac-SM
Reporting group description: Tacrolimus with steroids minimization (Tac-SM) Basiliximab induction. Tacrolimus plus Mycophenolate mofetil (MMF) and low-dose corticosteroids for 6 months with subsequent removal	
Reporting group title	CsA-SM
Reporting group description: CsA with steroid minimization (CsA-SM) Basiliximab induction. Ciclosporin A (CsA) plus Mycophenolate mofetil (MMF) and low-dose corticosteroids for 6 months with subsequent removal	

Reporting group values	Tac-SW	Tac-SM	CsA-SM
Number of subjects	44	42	42
Age categorical			
There were no specific criteria for age in general. All patients from 18 years and over were eligible to participate. However, given the characteristics of renal disease, the participants were subject to the following metabolic inclusion and exclusion criteria inter alia: Age Inclusion Criteria: Recipient age ≥ 60 or Recipient age between 45 and 59 years and at least one of specific metabolic criteria defined in the criteria section study participants. Age Exclusion Criteria: Recipient age under 45 years.			
Units: Subjects			
18 years and over	44	42	42
Age continuous			
The Overall Number of Baseline Participants was a mean of 61.0 (7.7) years. Attending to the arm assigned mean age was: - Tacrolimus With Rapid Steroid Withdrawal: 61.2 (7.6) years. - Tacrolimus With Steroids Minimization: 61.6 (7.3) years. - CsA With Steroid Minimization: 60.2 (8.3) years.			
Units: years			
arithmetic mean	61.2	61.6	60.2
standard deviation	± 7.6	± 7.3	± 8.3
Gender categorical			
100% of Participants (128) of whom 27.34% (35) were female and 72.66% (93) were male. Attending to each arm, the average of each gender was: - Tac-SW : Female = 25.0% (11) Male = 75.0% (33) - Tac-SM : Female = 28.6% (12)			

Male= 71.4% (30)			
- CsA-SM:			
Female = 28.6% (12)			
Male= 71.4% (30)			
Units: Subjects			
Female	11	12	12
Male	33	30	30

Reporting group description:

Tacrolimus-based immunosuppression and rapid steroid withdrawal (SW) within 1 week (Tac-SW) Basiliximab induction. Tacrolimus plus Mycophenolate mofetil (MMF), and corticosteroids with rapid withdrawal after one week

Tacrolimus with rapid steroid withdrawal: Tacrolimus 0.15 mg/Kg/day to achieve target trough levels of 8-12 ng/ml for the first month, and MMF 2 gr/day; steroids: 0.5 gr of Methylprednisolone (MP) intraoperatively and 125 mg on the first day, followed by oral doses of prednisone rapidly tapered from 30 mg/day to complete discontinuation by postoperative day 7. Basiliximab induction (4 mg, days 0 and 4).

Reporting group title	Tac-SM
-----------------------	--------

Reporting group description:

Tacrolimus with steroids minimization (Tac-SM)

Basiliximab induction. Tacrolimus plus Mycophenolate mofetil (MMF) and low-dose corticosteroids for 6 months with subsequent removal.

Tacrolimus with steroids minimization: Tacrolimus 0.15 mg/Kg/day to achieve target trough levels of 8-12 ng/ml for the first month, and MMF 2 gr/day; steroids: 0.5 gr of MP intraoperatively and 60 mg day 1; followed by oral doses of prednisone and gradual tapering to complete discontinuation over 6 months. Basiliximab induction (4 mg, days 0 and 4).

Reporting group title	CsA-SM
-----------------------	--------

Reporting group description:

CsA with steroid minimization (CsA-SM)

Basiliximab induction. Ciclosporin A (CsA) plus Mycophenolate mofetil (MMF) and low-dose corticosteroids for 6 months with subsequent removal.

CsA with steroid minimization: CsA 5 mg/Kg/day to achieve target trough of 150-200 ng/ml the first month, and similar pattern with MMF and steroids as group 2. Basiliximab induction (4 mg, days 0 and 4).

Serious adverse events	Tac-SW	Tac-SM	CsA-SM

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
08 June 2014	The recruitment was prematurely stopped for safety reasons	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Mainly white population and of low immunological risk, make the results not representative of other transplant populations.

Donor-specific antibody data were not planned in the study designed and thus were not collected for patients with BPAR.
