

Clinical trial results:

Double-blind, double-dummy, randomised, placebo-controlled, multi-centre phase III study on the efficacy and tolerability of a 8-week treatment with 9 mg budesonide vs. 3 g mesalazine vs. placebo in patients with lymphocytic colitis

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 March 2017
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 November 2016
Global end of trial reached?	Yes
Global end of trial date	16 January 2017
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the trial is to evaluate the efficacy of 9 mg budesonide/day and 3 g mesalazine/day compared to placebo for the induction of remission in lymphocytic colitis.

Protection of trial subjects:

Close supervision of subjects by implementing interim visits every 14 days to guarantee their safety and wellbeing. Prior to recruitment of patients, all relevant documents of the clinical study were submitted and proved by the Independent Ethics Committees (IECs) responsible for the participating investigators. Written consent documents embodied the elements of informed consent as described in the Declaration of Helsinki, the ICH Guidelines for Good Clinical Practice (GCP) and were in accordance with all applicable laws and regulations. The informed consent form and patient information sheet described the planned and permitted uses, transfers and disclosures of the patient's personal data and personal health information for purposes of conducting the study. The informed consent form and the patient information sheet further explained the nature of the study, its objectives and potential risks and benefits as well as the date informed consent was given. Before being enrolled in the clinical trial, every patient was informed that participation in this trial was voluntary and that he/she could withdraw from the study at any time without giving a reason and without having to fear any loss in his/her medical care. The patient's consent was obtained in writing before the start of the study. By signing the informed consent, the patient declared that he/she was participating voluntarily and intended to follow the study protocol instructions and the instructions of the investigator and to answer the questions asked during the course of the trial.

Background therapy:

None

Evidence for comparator:

Not applicable

Actual start date of recruitment	06 May 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	Sweden: 15
Country: Number of subjects enrolled	Czech Republic: 1
Country: Number of subjects enrolled	Denmark: 7
Country: Number of subjects enrolled	Germany: 19
Country: Number of subjects enrolled	Hungary: 6
Country: Number of subjects enrolled	Lithuania: 4

Worldwide total number of subjects	57
EEA total number of subjects	57

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	21
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

In total 57 patients were randomized from Germany, Sweden, Denmark, Hungary, Lithuania, Spain, Czech Republic and the Netherlands.

Pre-assignment

Screening details:

Patients signing the informed consent form were screened for up to 2 weeks to evaluate eligibility for the study. A total of 105 patients was screened for enrolment into the study. Forty-eight patients could not be randomised. The most frequent reason for screening failure was violation of eligibility criteria.

Period 1

Period 1 title	8-week double-blind treatment phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Blinding implementation details:

The study was to be conducted using the double-dummy technique to guarantee the double-blinding.

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Treatment A
------------------	-------------

Arm description:

8-week treatment with 1x sachet Budenofalk® 9 mg granules and 2x sachets Salofalk® 1.5g placebo granules

Arm type	Experimental
Investigational medicinal product name	Budenofalk® 9 mg granules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant granules
Routes of administration	Oral use

Dosage and administration details:

One sachet Budenofalk® 9 mg granules once daily in the morning

Investigational medicinal product name	Salofalk® 1.5g placebo granules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant granules
Routes of administration	Oral use

Dosage and administration details:

Two sachets Salofalk® 1.5g placebo granules once daily in the morning

Arm title	Treatment B
------------------	-------------

Arm description:

8-week treatment with 1x sachet Budenofalk® 9 mg placebo granules and 2x sachets Salofalk® 1.5g granules

Arm type	Experimental
Investigational medicinal product name	Budenofalk® 9 mg placebo granules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant granules
Routes of administration	Oral use

Dosage and administration details:	
One sachet Budenofalk® 9 mg placebo granules once daily in the morning.	
Investigational medicinal product name	Salofalk® 1.5g granules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant granules
Routes of administration	Oral use
Dosage and administration details:	
Two sachets Salofalk® 1.5g granules once daily in the morning.	
Arm title	Treatment C
Arm description:	
8-week treatment with 1x sachet Budenofalk® 9 mg placebo granules and 2x sachets Salofalk® 1.5g placebo granules	
Arm type	Placebo
Investigational medicinal product name	Budenofalk® 9 mg placebo granules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant granules
Routes of administration	Oral use
Dosage and administration details:	
One sachet Budenofalk® 9 mg placebo granules once dail in the morning	
Investigational medicinal product name	Salofalk® 1.5g placebo granules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant granules
Routes of administration	Oral use
Dosage and administration details:	
Two sachets Salofalk® 1.5g placebo granules once daily in the morning	

Number of subjects in period 1	Treatment A	Treatment B	Treatment C
Started	19	19	19
Completed	15	15	14
Not completed	4	4	5
Adverse event, non-fatal	2	3	-
Other reasons	1	-	-
Lack of patient's co-operation	1	1	-
Lack of efficacy	-	-	5

Period 2

Period 2 title	4-week open-label treatment phase
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded
Blinding implementation details:	
NA	

Arms

Arm title	Open-label treatment
Arm description:	
4-week open-label (OL) treatment phase with 1x sachet Budenofalk® 9 mg granules, once daily, for patients who were	
<ul style="list-style-type: none"> prematurely withdrawn from the double-blind treatment phase due to lack of efficacy, not in clinical remission at the end of the double-blind treatment phase or experiencing a clinical relapse during the follow-up phase. 	
Arm type	Experimental
Investigational medicinal product name	Budenofalk® 9 mg granules
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Gastro-resistant granules
Routes of administration	Oral use

Dosage and administration details:

One sachet Budenofalk® 9 mg granules once daily in the morning

Number of subjects in period 2^[1]	Open-label treatment
Started	19
Completed	17
Not completed	2
Adverse event, non-fatal	1
Lack of patient's co-operation	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: The 4-week open-label treatment phase could only be entered by a subset of patients of the preceding period.

Statistical analyses

Statistical analysis title	Confirmative analysis I
Statistical analysis description: Confirmative comparison between Treatment A (Budenofalk® granules) and Treatment C (placebo).	
Comparison groups	Treatment A v Treatment C
Number of subjects included in analysis	38
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.0101 ^[2]
Method	Normal approximation test
Parameter estimate	Risk difference (RD)
Point estimate	0.368
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.031
upper limit	0.633

Notes:

[1] - Superiority is shown if the lower bound of the 95% repeated confidence interval for the treatment difference with respect to clinical remission is > 0. This corresponds to a local significance level of 0.0164 for the interim analysis / final analysis (incl. overrunning patients).

[2] - As the p-value is lower than the local significance level of 0.0164 for the interim analysis / final analysis (incl. overrunning patients), superiority has been proven.

Statistical analysis title	Confirmative analysis II
Statistical analysis description: Confirmative comparison between Treatment B (Salofalk® granules) and Treatment C (placebo).	
Comparison groups	Treatment B v Treatment C
Number of subjects included in analysis	38
Analysis specification	Pre-specified
Analysis type	superiority ^[3]
P-value	= 0.0969
Method	Normal approximation test
Parameter estimate	Risk difference (RD)
Point estimate	0.211
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.132
upper limit	0.508

Notes:

[3] - Superiority is shown if the lower bound of the 95% repeated confidence interval for the treatment difference with respect to clinical remission is > 0. This corresponds to a local significance level of 0.0164 for the interim analysis / final analysis (incl. overrunning patients).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 January 2010	Primary reason for amendment no. 1 was that lymphocytic colitis may be associated with the use of certain drugs. A high level of likelihood of being able to cause microscopic colitis is attributed to acarbose, aspirin, Cyclo3Fort, lansoprazole, nonsteroidal anti-inflammatory drugs, ranitidine, sertraline, and ticlopidine. Therefore, the previous and concomitant medication section has been amended.
10 June 2013	Amendment 2 was required to take into account the new information of the latest Investigator's Brochure for Salofalk® (oral formulations). Some administrative additions were also included in the protocol to verbalize more detailed guidance as per the current status quo.
30 September 2015	Amendment no. 3 which was requested by the Italian competent authority, agenzia italiana del farmaco (AIFA), was applicable only for Italy and only submitted to the IECs of Italy. It focused on live vaccination and diagnosis of chickenpox, herpes zoster or measles. Additional exclusion and withdrawal criteria were included.
22 June 2016	Amendment no. 4 referred to the fact that the planned interim analysis was to be performed after inclusion of 54 patients who were evaluable in the intention-to-treat analysis (approximately 18 patients in each treatment group), instead of 60 patients.
16 August 2016	Substantial amendment no. 5 was submitted to the IECs of Germany, Hungary, Spain and Lithuania and referred to basic clarifications of the study protocol.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
