Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 July 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 May 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the effectiveness of 2 doses of teriflunomide in comparison to interferon-beta 1 a, evaluated by the time to failure, with failure being defined as either relapse or permanent study treatment discontinuation for any cause whichever comes first.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial, the subject is participating in, contact details and any information needed in the event of a medical emergency.

Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 April 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 62
Country: Number of subjects enrolled	Spain: 22
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	Belgium: 10
Country: Number of subjects enrolled	Czech Republic: 21
Country: Number of subjects enrolled	France: 41
Country: Number of subjects enrolled	Germany: 55
Country: Number of subjects enrolled	Greece: 3
Country: Number of subjects enrolled	Hungary: 29
Country: Number of subjects enrolled	Italy: 53
Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	Switzerland: 1
Country: Number of subjects enrolled	Tunisia: 1
Worldwide total number of subjects	324
EEA total number of subjects	301

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	323
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The recruitment initiated in April 2009 was completed in July 2010. A total of 369 subjects were screened at 54 sites in 13 countries. The common end date of core treatment period was 14 September 2011 (maximum treatment duration of 115 weeks). The end date of extension was 13 May 2015 (maximum treatment duration of 197 weeks).

Pre-assignment

Screening details:

Randomization was stratified by country and baseline disability (Expanded Disability Status Scale [EDSS] score ≤ 3.5 or >3.5). Assignment to groups was done centrally using an Interactive Voice Response System (IVRS) in a 1:1:1 ratio after confirmation of the selection criteria. 324 subjects were randomized at 53 sites.

Period 1

Period 1 title	Core Treatment Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Assessor ^[1]

Arms

Are arms mutually exclusive?	Yes
Arm title	Teriflunomide 7 mg

Arm description:

Teriflunomide 7 mg once daily for 48 weeks.

Arm type	Experimental
Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide orally as a single dose in the morning of each day with water and may be taken with or without food.

Arm title	Teriflunomide 14 mg
------------------	---------------------

Arm description:

Teriflunomide 14 mg once daily for 48 weeks.

Arm type	Experimental
Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide orally as a single dose in the morning of each day with water and may be taken with or without food. One Subject received teriflunomide 7 mg instead of teriflunomide 14 mg.

Arm title	Interferon beta-1-a (IFN- β -1a)
------------------	--

Arm description:

IFN- β -1a three times a week for 48 weeks.

Arm type	Active comparator
Investigational medicinal product name	Interferon beta-1a
Investigational medicinal product code	
Other name	Rebif®
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

IFN-β-1a subcutaneous (SC) injection at the same time on the same three days in the late afternoon or evening. Three subjects refused treatment with Rebif®.

Notes:

[1] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: As per the trial design only assessor was blinded in the study.

Number of subjects in period 1	Teriflunomide 7 mg	Teriflunomide 14 mg	Interferon beta-1-a (IFN-β-1a)
Started	109	111	104
Treated	109	111	101
Completed	89	89	71
Not completed	20	22	33
Other than specified above	-	1	1
Adverse event	9	12	22
Poor compliance to protocol	-	-	1
Lost to follow-up	1	1	-
Wish to be pregnant	1	2	1
Lack of efficacy	7	4	2
Withdrawal by subject	2	2	6

Period 2

Period 2 title	Extension Treatment Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Assessor ^[2]

Arms

Are arms mutually exclusive?	Yes
Arm title	Teriflunomide 7 mg / 14 mg

Arm description:

Subjects received teriflunomide 7 mg once daily in core treatment period and teriflunomide 14 mg once daily in extension treatment period.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide orally as a single dose in the morning of each day with water and may be taken with or without food.

Arm title	Teriflunomide 14 mg / 14 mg
------------------	-----------------------------

Arm description:

Subjects received teriflunomide 14 mg once daily in core treatment period and teriflunomide 14 mg once daily in extension treatment period.

Arm type	Experimental
Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide orally as a single dose in the morning of each day with water and may be taken with or without food.

Arm title	IFN-β-1a / Teriflunomide 14 mg
------------------	--------------------------------

Arm description:

Subjects received IFN-β-1a three times a week in core treatment period and teriflunomide 14 mg once daily in extension treatment period.

Arm type	Experimental
Investigational medicinal product name	Teriflunomide
Investigational medicinal product code	HMR1726
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Teriflunomide orally as a single dose in the morning of each day with water and may be taken with or without food.

Notes:

[2] - The roles blinded appear inconsistent with a simple blinded trial.

Justification: As per the trial design only assessor was blinded in the study.

Number of subjects in period 2^[3]	Teriflunomide 7 mg / 14 mg	Teriflunomide 14 mg / 14 mg	IFN-β-1a / Teriflunomide 14 mg
Started	89	89	59
Completed	61	66	40
Not completed	28	23	19
Other than specified above	10	9	5
Adverse event	8	5	5
Poor compliance to protocol	1	1	1
Lost to follow-up	1	-	-
Lack of efficacy	8	8	8

Notes:

[3] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 12 subjects completed the core period but didn't enter the extension period.

Baseline characteristics

Reporting groups

Reporting group title	Teriflunomide 7 mg
Reporting group description: Teriflunomide 7 mg once daily for 48 weeks.	
Reporting group title	Teriflunomide 14 mg
Reporting group description: Teriflunomide 14 mg once daily for 48 weeks.	
Reporting group title	Interferon beta-1-a (IFN-β-1a)
Reporting group description: IFN-β-1a three times a week for 48 weeks.	

Reporting group values	Teriflunomide 7 mg	Teriflunomide 14 mg	Interferon beta-1-a (IFN-β-1a)
Number of subjects	109	111	104

Primary: Core Treatment Period: Overview of Failures

End point title	Core Treatment Period: Overview of Failures ^[1]
End point description: Failure was defined as the first occurrence of confirmed relapse or permanent treatment discontinuation (for any cause) which ever came first. If no events occurred, the subject was considered free of failure. Each episode of relapse appearance, or worsening of a clinical symptom that was stable for at least 30 days, that persisted for a minimum of 24 hours in the absence of fever was to be confirmed by an increase in EDSS score or Functional System scores. Intent-to-treat population: all randomized subjects. Subjects were considered in the treatment group to which they were randomized regardless of the drug they actually received.	
End point type	Primary
End point timeframe: Core treatment period between 48 and 118 weeks depending on when the subject was enrolled	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As data is descriptive in nature, no statistical analysis is performed.

Statistical analyses

No statistical analyses for this end point

Primary: Core Treatment Period: Time to Failure: KaplanMeier Estimates of the Rate of Failure at Timepoints

End point title	Core Treatment Period: Time to Failure: KaplanMeier Estimates of the Rate of Failure at Timepoints
-----------------	--

End point description:

Probability of disability progression at 24, 48 and 96 weeks was estimated using Kaplan-Meier method on the time to failure defined as the time from randomization to failure. Subjects free of failure were censored at the date of last treatment. Kaplan-Meier method consists in computing probabilities of non-occurrence of event at any observed time of event and multiplying successive probabilities for time $\leq t$ by any earlier computed probabilities to estimate the probability of being event-free for the amount of time t. Probability of event at time t is 1 minus the probability of being event-free for the amount of time t. ITT population.

End point type	Primary

Method	Logrank

Notes:

[4] - Hochberg testing procedure:

-a-priori threshold for statistical significance ≤ 0.05 for the largest p-value of the 2 pair-wise comparisons.

-a-priori threshold for statistical significance ≤ 0.025 for the other p-value, if the largest p-value > 0.05 .

[5] - Two-sided Log Rank test with the region of enrollment and baseline EDSS stratum as stratification factors.

Secondary: Core Treatment Period: Annualized Relapse Rate [ARR] - Poisson Regression Estimates

End point title	Core Treatment Period: Annualized Relapse Rate [ARR] - Poisson Regression Estimates
-----------------	---

End point description:

ARR is obtained from the total number of confirmed relapses that occurred during the treatment period divided by the sum of the treatment durations. To account for the different treatment durations among subjects, a Poisson regression model with robust error variance was used (total number of confirmed relapses as response variable; log-transformed treatment duration as "offset" variable; treatment group, region of enrollment and baseline EDSS stratum as covariates). ITT population.

End point type	Secondary
----------------	-----------

Secondary: Core Treatment Period: Change From Baseline in Fatigue Impact Scale (FIS) Total Score

End point title	Core Treatment Period: Change From Baseline in Fatigue Impact Scale (FIS) Total Score
-----------------	---

End point description:

FIS is a subject-reported scale that qualifies the impact of fatigue on daily life in subjects with MS. It consists of 40 statements that measure fatigue in three areas; physical, cognitive, and social. FIS total score ranges from 0 (no problem) to 160 (extreme problem). Least-square means were estimated using a Mixed-effect model with repeated measures [MMRM] on FIS total score data (treatment group, region of enrollment, baseline EDSS stratum, visit, treatment-by-visit interaction, baseline value, and baseline-by-visit interaction as factors). ITT population.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AE) were collected from signature of the informed consent form up to the final visit (Week 197) regardless of seriousness or relationship to Investigational Medicinal Product (IMP).

Adverse event reporting additional description:

The analysis was performed on the safety population as previously defined. Reported adverse events are treatment emergent adverse events that is AEs that developed/worsened during the 'on treatment period' (up to 28 days after the last intake of IMP in the extension study treatment period).

Assessment type	Systematic

Reporting groups

Reporting group title	Core Treatment: Teriflunomide 7 mg
-----------------------	------------------------------------

Reporting group description:

Teriflunomide 7 mg once daily (mean exposure of 456.62 days).

Reporting group title	Core Treatment: Teriflunomide 14 mg
-----------------------	-------------------------------------

Reporting group description:

Teriflunomide 14 mg once daily (mean exposure of 434.43 days).

Reporting group title	Core Treatment: IFN- β -1a
-----------------------	----------------------------------

Reporting group description:

Interferon β -1a 3 times a week (mean exposure of 405.18 days).

Reporting group title	Extended Treatment: Teriflunomide 14 mg (After IFN- β -1a)
-----------------------	--

Reporting group description:

Teriflunomide 14 mg once daily in extended treatment period after Interferon β -1a 3 times a week in core treatment period (mean exposure of 1000.03 days).

Reporting group title	Extended Treatment: Teriflunomide 14 mg (After 7 mg)
-----------------------	--

Reporting group description:

Teriflunomide 14 mg once daily in extended treatment period after 7 mg in the core treatment period (mean exposure of 996.76 days).

Reporting group title	Extended Treatment: Teriflunomide 14 mg (After 14 mg)
-----------------------	---

Reporting group description:

Teriflunomide 14 mg once daily in extended treatment period after 14 mg in core treatment period (mean exposure of 1015.32 days).

Serious adverse events	Core Treatment: Teriflunomide 7 mg	Core Treatment: Terifluno	Core Treatment: IFN- β -1a

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
25 March 2011	<p>Following changes were made:</p> <ul style="list-style-type: none">•Extension part of the study was elaborated, which was offered to all subjects randomized in EFC10891/TENERE and completed the treatment period - regardless of study arm (teriflunomide or interferon-beta 1a). This extension was an open-label study with all subjects treated with teriflunomide 14 mg/day. The extension was planned to last 48 weeks.•Teriflunomide elimination (washout) period was shortened from 16 weeks to 4 weeks to allow subjects to terminate treatment more rapidly.•Concomitant medications were modified, which could interfere with the study based on the updated drug interactions data (CYP2C9 substrate and CYP inducers).•Peripheral neuropathy confirmed by electrophysiological tests was added as an alert term.•Frequency of sample collection was reduced for PK based on available data of teriflunomide.•Clarification regarding reporting of AEs was required from signature of informed consent.•Rebif overdose, accountability and compliance, disposition of used syringes/cartridges, and other editorial corrections related to the IMP, were re-defined.•Clarification and corrected some inconsistencies throughout the protocol regarding neutropenia.
12 July 2012	<ul style="list-style-type: none">• Extended the current extension period of the TENERE study up to when teriflunomide was commercially available in the country.• Modified the concomitant treatments based on the updated drug interactions data.
28 January 2013	<ul style="list-style-type: none">•Reduction of scheduled study visits and visit contents for subjects completed a minimum 18 months/72 weeks in extension phase.•Clinical visits were performed every 24 weeks up to the end of treatment, and included adverse event reporting; recording of concomitant medication, vital signs, physical examination; dispense study drugs: accountability/compliance; EDSS /Functional System (FS); clinical laboratory only at EOT visit.•Central lab services would not be utilized. Lab tests were performed on local basis for all subjects.•Clarification that subjects continued on teriflunomide by obtaining it commercially after ending in this extension study, accelerated elimination procedure and follow-up visits were not required.•Updated on the PK handling procedure and sampling time.•New information regarding potential drug interactions•Dosage reduction of activated charcoal for accelerated elimination procedure (reduced from 50g 4 times daily for 11 days to 50g twice daily for 11 days).

09 May 2013	<ul style="list-style-type: none"> •Reduction of scheduled study visits and visit contents for subjects completed a minimum 72 weeks in extension phase. •Clinical visits was performed every 24 weeks up to the end of treatment, and included adverse event reporting; recording of concomitant medication, vital signs, physical examination; dispense study drugs: accountability/compliance; EDSS / FS; clinical laboratory only at EOT visit. •Central lab services was not be utilized except for post-accelerated elimination PK samples. Lab tests was performed on local basis for all subjects. •Clarification that subjects continued on teriflunomide by obtaining it commercially after ending in this extension study, accelerated elimination procedure and follow-up visits were not required. •Updated the PK handling procedure and sampling time. •New information regarding potential drug interactions. •Dosage reduction of activated charcoal for accelerated elimination procedure (reduced from 50g 4 times daily for 11 days to 50g twice daily for 11 days).
