

## Clinical trial results:

**A phase III double-blind, cluster-randomized, controlled study to evaluate the impact on nasopharyngeal carriage, acute otitis media, immunogenicity and safety of GSK Biologicals' 10-valent pneumococcal and non-typeable Haemophilus influenzae protein D conjugate vaccine in children starting vaccination below 18 months of age.**

### Summary

EudraCT number	2008-006551-51
Trial protocol	FI
Global end of trial date	31 January 2012

### Results information

Result version number	v4 (current)
This version publication date	02 January 2021
First version publication date	30 July 2015
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li></ul> Results have been amended to account for consistency with other registries.

### Trial information

#### Trial identification

Sponsor protocol code	112595
-----------------------	--------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00839254
WHO universal trial number (UTN)	-

Notes:

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000673-PIP01-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 April 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	31 January 2012
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate the effectiveness of 10Pn-PD-DiT vaccine in preventing culture-confirmed IPD due to vaccine pneumococcal serotypes in children vaccinated with at least one dose of 10Pn-PD-DiT within the first 7 months of life in clusters assigned to a 3-dose primary vaccination course.

Criteria for effectiveness: Effectiveness (VE) in preventing culture-confirmed IPD due to the 10 vaccine serotypes will be demonstrated if the 2-sided p-value calculated for the null hypothesis  $H_0 = (\text{vaccine-type [VT] IPD VE} = 0\%)$  is lower than 5%. Refer to 10PN-PD-DIT-043 study (EudraCT number : 2008-005149-48).

Protection of trial subjects:

Vaccinees were observed closely for at least 30 minutes following the administration of vaccines, with appropriate medical treatment readily available in case of a rare anaphylactic reaction. Vaccines/products were administered only to eligible subjects that had no contraindications to any components of the vaccines/products. Subjects were followed up for serious adverse events (SAEs) reported as occurring during the study up to study end. An Independent Data Monitoring Committee (IDMC) was set up for this study to protect the ethical and safety interests of the subjects recruited, while securing as much as possible the scientific validity of the data. The IDMC was the same as in the 10PN-PD-DIT-043 study and will review safety data (SAEs) and all-cause mortality to identify potential treatment harm/benefit. Responsibilities of the IDMC included the following: 1) Review of data collection methods, safety/effectiveness monitoring procedures and making recommendations for additions or adjustments, as applicable.; 2) Recommendations for maintaining, or breaking the blind where necessary, in the course of reviewing the results; 3) Recommendations for stopping the trial for effectiveness or safety reasons when appropriate.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 February 2009
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	9 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Finland: 54088
Worldwide total number of subjects	54088
EEA total number of subjects	54088

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	54088
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study is linked with 10PN-PD-DIT-043 (111442) study (NCT00861380.-EudraCT: 2008-005149-48) with which primary objectives and outcomes are common. Subjects of 10PN-PD-DIT-043 study contributed to the results of this study.

### Pre-assignment

Screening details:

Out of 6183 subjects enrolled, 6177 were analyzed:(6174 subjects and 3 of them received 2 subject numbers, without any impact on the results of the analyses). Total population assessed for combined analyses performed on both studies included 45977 subjects, see details in groups description.

### Pre-assignment period milestones

Number of subjects started	54088
Number of subjects completed	6177

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 6
Reason: Number of subjects	10PN043-053 subjects: 45977
Reason: Number of subjects	Control 6W-6M pooled group: 1928

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

This study was conducted in a double-blind fashion for vaccine/control clusters applying the same 2+1 and 3+1 infant schedules. Study was run in an open fashion between infant schedules.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	10Pn3+1-6W-6M/053 Group

Arm description:

Subjects in this group were subjects enrolled in the 10PN-PD-DIT-053 (NCT00839254 - EUDRACT 2008-006551-51) study, aged 6 weeks to 6 months at enrolment. Subjects received the Synflorix (called also 10Pn-PD-DiT, 10Pn or GSK1024850A) vaccine according to a 3-dose primary vaccination schedule with an interval of at least 4 weeks between doses, followed by a booster dose of the same vaccine with an interval of preferably 6 months since the previous vaccine dose (minimum 4 months) (3+1 Infant Schedule). The vaccine was administered intramuscularly in the thigh.

Arm type	Experimental
Investigational medicinal product name	10-valent pneumococcal and non-typeable H. influenzae protein D conjugate vaccine
Investigational medicinal product code	10Pn-PD-DiT
Other name	10Pn, Synflorix
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

Intramuscularly administration by injection in the thigh.

<b>Arm title</b>	10Pn2+1-6W-6M/053 Group
------------------	-------------------------

**Arm description:**

Subjects in this group were subjects enrolled in the 10PN-PD-DIT-053 (NCT00839254 - EUDRACT 2008-006551-51) study, aged 6 weeks to 6 months at enrolment. Subjects received the Synflorix (called also 10Pn-PD-DiT, 10Pn or GSK1024850A) vaccine according to a 2-dose primary vaccination with an interval of at least 8 weeks, followed by a booster dose of the same vaccine with an interval of preferably 6 months since the previous vaccine dose (minimum 4 months) (2+1 Infant Schedule). The vaccine was administered intramuscularly in the thigh.

Arm type	Experimental
Investigational medicinal product name	10-valent pneumococcal and non-typeable H. influenzae protein D conjugate vaccine
Investigational medicinal product code	10Pn-PD-DiT
Other name	10Pn, Synflorix
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Intramuscularly administration by injection in the thigh.

<b>Arm title</b>	Ctrl3+1-6W-6M/053 Group
------------------	-------------------------

**Arm description:**

Subjects in this group were subjects enrolled in the 10PN-PD-DIT-053 (NCT00839254 - EUDRACT 2008-006551-51) study, aged 6 weeks to 6 months at enrolment. Subjects received the Engerix B (called also HBV vaccine) according to a 3-dose primary vaccination schedule with an interval of at least 4 weeks between doses followed by a booster dose of the same vaccine with an interval of preferably 6 months since the previous vaccine dose (minimum 4 months) (3+1 Infant Schedule). The vaccine was administered intramuscularly in the thigh.

Arm type	Active comparator
Investigational medicinal product name	Engerix B-thio free
Investigational medicinal product code	
Other name	Engerix-B,HBV
Pharmaceutical forms	Suspension for injection
Routes of administration	Intramuscular use

**Dosage and administration details:**

Intramuscularly administration by injection in the thigh.

<b>Arm title</b>	Ctrl2+1-6W-6M/053 Group
------------------	-------------------------

---

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 6183 subjects in total were enrolled in this study, out of which 6177 were actually vaccinated in this study. In addition to these, the Total population assessed for combined analyses performed on both studies included 45977 subjects and an additional pooled group- subjects analysis set has to be defined for the 6W-6M Control group for presenting carriage data.

#### Reporting group description:

Subjects in this group were subjects enrolled in the 10PN-PD-DIT-053 (NCT00839254 - EUDRACT 2008-006551-51) study, aged 7 to 11 months at enrolment. Subjects received the Synflorix (called also 10Pn-PD-DiT, 10Pn or GSK1024850A) vaccine according to a 2-dose primary vaccination with an interval of at least 8 weeks followed by a booster dose of the same vaccine with an interval of preferably 6 months since the previous vaccine dose (minimum 4 months) (7-11M Schedule). The vaccine was administered intramuscularly in the thigh or in the deltoid region of upper arm, provided the muscle size was adequate.

**Primary: Person Year Rate as regards subjects with culture-confirmed IPD due to any of the 10 pneumococcal vaccine serotypes. In children starting vaccination within 7 months of life and assigned to a 3-dose primary vaccination course.**

End point title	Person Year Rate as regards subjects with culture-confirmed IPD due to any of the 10 pneumococcal vaccine serotypes. In children starting vaccination within 7 months of life and assigned to a 3-dose primary vaccination course.
-----------------	--

End point description:

The PYAR (Person-Year Rate) as regards subjects with culture-confirmed invasive pneumococcal disease (IPD) due to any of the pneumococcal vaccine serotypes was tabulated (vaccine pneumococcal serotypes = serotypes 1, 4, 5, 6B, 7F, 9V, 14, 18C, 19F and 23F). PYAR was calculated as follows  $n$  (= number of subjects reported with a culture confirmed IPD) divided by  $T$  (= sum of follow-up period expressed in years) (per 1000) as well as the corresponding 95% confidence interval (CI), calculated as a 2-sided profile log-likelihood ratio 95% CI using a classical log linear Poisson regression with strata.

End point type	Primary
----------------	---------

End point timeframe:

Period of follow-up was any time after the administration of first vaccine dose till the end of the blinded invasive disease (ID) Follow-up period (The blinded ID Follow-up period lasted at least 30 months).

<b>End point values</b>	10Pn3+1-6W-6M/043+053 Group	Ctrl-6W-6M/043+053 Group

## Statistical analyses

<b>Statistical analysis title</b>	Statistical analysis 1
Statistical analysis description:	
Analysis aimed at providing an estimate of vaccine effectiveness (VE) at preventing culture-confirmed IPD by comparing PYARs between groups taking into account the following parameters: T, n, n+ (number of clusters with at least one event culture-confirmed ID), and n/T. VE of the 10Pn vaccine in preventing culture-confirmed IPD due to the 10 vaccine serotypes was demonstrated if the 2-sided p-value calculated for the null hypothesis H0 = (vaccine-type [VT] IPD VE = 0%) was lower than (<) 5%.	
Comparison groups	10Pn3+1-6W-6M/043+053 Group v Ctrl-6W-6M/043+053 Group
Number of subjects included in analysis	20474
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	< 0.0001 <sup>[2]</sup>
Method	Regression, Linear
Parameter estimate	VE (1-RR)
Point estimate	100
Confidence interval	
level	95 %
sides	2-sided
lower limit	82.8
upper limit	100

Notes:

[1] - VE (defined as 1 minus Relative Risk (RR)) was calculated by comparing numbers of culture-confirmed IPD. The number of subjects with IPD in each cluster was compared between groups (10PN3+1 vs Control). This comparison was done using a negative binomial log-linear model with correction for dispersion group- and cluster-related effect.

[2] - P-value was calculated using a classical log linear Poisson regression with strata, without taking into account the multiplicity of the endpoints.

FU period considered as period between Dose 1 administration and cut-off date of 31 December 2011. CXR HDP was defined as a HDP case with the presence of abnormal pulmonary infiltrates on the CXR as per independent review panel judgement using WHO methodology. Abnormal pulmonary infiltrates could be either with (Consolidated HDP) or without (Non-consolidated HDP) alveolar consolidation/pleural effusion. New cases of HDP and CXR HDP were based on a 30-day rule, i.e. a new episode was considered if at least a 30-day interval elapsed from the onset of the previous episode.

End point type	Secondary

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of subjects with Upper respiratory tract infections (URTIs) (in a subset of subjects in Turku area)

End point title	Number of subjects with Upper respiratory tract infections (URTIs) (in a subset of subjects in Turku area)
-----------------	--

End point description:

Analysis of this outcome was performed in the Turku area. The number of subjects reporting at least one URTI any time after the administration of the first vaccine dose was tabulated. The analysis was performed in a subset of vaccinated subjects including all vaccinated subjects enrolled in the 10PNPD-DIT-053 study in the Turku area and those vaccinated subjects enrolled in the 10PN-PD-DIT-043 study in the Turku area who agreed to take part in this assessment.

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of subjects with any, Grade 3 and related solicited general symptoms.

End point title	Number of subjects with any, Grade 3 and related solicited general symptoms.
-----------------	--

End point description:

Assessed solicited general symptoms were drowsiness (D), fever [defined as rectal temperature [T(R)]  $\geq 38$  degrees Celsius ( $^{\circ}$ C) or oral/axillary/tympanic temperature equal to or above  $37.5^{\circ}$ C], irritability/fussiness (I) and loss of appetite (L ap). Any = occurrence of the symptom regardless of intensity grade. Grade 3 (G3) drowsiness = drowsiness that prevented normal activity. G3 fever = rectal temperature  $> 40^{\circ}$ C. G3 irritability/fussiness = cried that could not be comforted/prevented normal activity. G3 loss of appetite = not eating at all. Related (Rel) = a symptom assessed by investigator as causally related to the vaccination.

End point type	Secondary

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of subjects with any unsolicited adverse events (AEs).

End point title	Number of subjects with any unsolicited adverse events (AEs).
-----------------	---

End point description:

An unsolicited AE covers any untoward medical occurrence in a clinical investigation subject temporally associated with the use of a medicinal product, whether or not considered related to the medicinal product and reported in addition to those solicited during the clinical study and any solicited symptom with onset outside the specified period of follow-up for solicited symptoms. Any was defined as the occurrence of any unsolicited AE regardless of intensity grade or relation to vaccination.

End point type	Secondary
----------------	-----------

End point timeframe:

Within 31 days (31D) after each vaccination (M0+31D, M1+31D [only for 3+1 schedule], M2+31D, M8+31D [booster dose] for 6W-6M subjects; M0+31D, M2+31D, M6+31D [booster dose] for 7M-11M subjects; M0+31D, M6+31D for 12M-18M subjects)

### Secondary: Number of subjects with serious adverse events (SAEs).

End point title	Number of subjects with serious adverse events (SAEs).
-----------------	--

End point description:

An event is defined as 'serious' when it meets one of the pre-defined outcomes described below: results in death, is life-threatening, requires hospitalisation or prolongation of existing hospitalisation; results in disability/incapacity, or is a congenital anomaly/birth defect in the offspring of a study subject. Medical or scientific judgement should be exercised in deciding whether reporting is appropriate in other situations, such as important medical events that may not be immediately life-threatening or result in death or hospitalisation but may jeopardize the subject or may require medical or surgical intervention to prevent one of the other outcomes listed in the above definition. These should also be considered serious.

End point type	Secondary

## Statistical analyses

No statistical analyses for this end point

### Secondary: NUMBER OF NASOPHARYNGEAL SWABS WITH GROUP A STREPTOCOCCUS PATHOGENS. IN SUBJECTS RECEIVING 12-18M SCHEDULE OF 10PN

End point title	NUMBER OF NASOPHARYNGEAL SWABS WITH GROUP A STREPTOCOCCUS PATHOGENS. IN SUBJECTS RECEIVING 12-18M SCHEDULE OF 10PN <sup>[29]</sup>
-----------------	--

End point description:

At each time point where a swab sample result was available, the number/percentage of swabs associated with the specified bacteria was tabulated.

End point type Secondary

End point timeframe:

At 12-18 months (mths) of age (prior to dose 1); at 19-25 mths of age (1 mth post dose 2); at 21-27 mths of age (3 months post dose 2)

Notes:

[29] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This end point analysis has been performed on 12-18M subjects

## Secondary: NUMBER OF NASOPHARYNGEAL SWABS WITH STAPHYLOCOCCUS AUREUS PATHOGENS. IN SUBJECTS RECEIVING 3+1 AND 2+1 INFANT SCHEDULES OF 10PN

End point title NUMBER OF NASOPHARYNGEAL SWABS WITH STAPHYLOCOCCUS AUREUS PATHOGENS. IN SUBJECTS RECEIVING 3+1 AND 2+1 INFANT SCHEDULES OF 10PN<sup>[30]</sup>

End point description:

At each time point where a swab sample result was available, the number/percentage of swabs associated with the specified bacteria was tabulated. The "prior to dose 1" nasopharyngeal swab samples collected from subjects within their first 7 months of age were obtained solely from the Immuno subset (The Immuno subset was constituted of the first ± 1500 subjects from whom blood samples were collected, according to age and treatment groups).

End point type Secondary

End point timeframe:

At 3 months (mths) of age (prior to dose 1); at 6 mths of age (1 mth post dose 3 or post dose 2) ; at 11-12 mths of age (pre-booster dose) ; at 14-15 mths of age ( 3 mths post-booster) ; at 18-22 mths of age (10 mths post-booster)

Notes:

[30] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

### Secondary: PNEUMOCOCCAL ANTIBODY CONCENTRATIONS AGAINST CROSS-REACTIVE PNEUMOCOCCAL SEROTYPES 6A AND 19A, IN THE IMMUNO SUBSET, IN SUBJECTS RECEIVING 3+1 INFANT SCHEDULES OF 10PN

End point title	PNEUMOCOCCAL ANTIBODY CONCENTRATIONS AGAINST CROSS-REACTIVE PNEUMOCOCCAL SEROTYPES 6A AND 19A, IN THE IMMUNO SUBSET, IN SUBJECTS RECEIVING 3+1 INFANT SCHEDULES OF 10PN <sup>[35]</sup>
-----------------	---

End point description:

Antibody concentrations were measured by 22F-inhibitionenzyme-linked Immunosorbent Assay (ELISA), expressed as geometric mean concentrations (GMCs), in micrograms per milliliter (µg/mL). Serotypes assessed were the cross-reactive pneumococcal serotypes 6A and 19A. The cut-off of the assay was  $\geq 0.05$  µg/mL. The Immuno subset was constituted of the first  $\pm 1500$  subjects from whom blood samples were collected, according to age and treatment groups.

End point type	Secondary
----------------	-----------

End point timeframe:

At 6 mths of age (1 mth post dose 3); at 11-12 mths of age (pre-booster dose) ; at 12-13 mths of age (1 mth post-booster) ; at 18-22 mths of age (10 mths post-booster)

Notes:

[35] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This end point analysis has been performed on 6W-6M subjects (3+1 schedule)

### Secondary: PNEUMOCOCCAL ANTIBODY CONCENTRATIONS AGAINST CROSS-REACTIVE PNEUMOCOCCAL SEROTYPES, IN THE IMMUNO SUBSET. IN SUBJECTS RECEIVING 7-11M SCHEDULE OF 10PN

End point title	PNEUMOCOCCAL ANTIBODY CONCENTRATIONS AGAINST CROSS-REACTIVE PNEUMOCOCCAL SEROTYPES, IN THE IMMUNO SUBSET. IN SUBJECTS RECEIVING 7-11M SCHEDULE OF 10PN <sup>[45]</sup>
-----------------	--

#### End point description:

Antibody concentrations were measured by 22F-inhibitionenzyme-linked Immunosorbent Assay (ELISA), expressed as geometric mean concentrations (GMCs), in micrograms per milliliter ( $\mu\text{g}/\text{mL}$ ). Serotypes assessed were the cross-reactive pneumococcal serotypes 6A and 19A. The cut-off of the assay was  $\geq 0.05 \mu\text{g}/\text{mL}$ . The Immuno subset was constituted of the first  $\pm 1500$  subjects from whom blood samples were collected, according to age and treatment groups.

End point type	Secondary
----------------	-----------

#### End point timeframe:

At 8-12 months (mths) of age (1 mth post dose 1); at 9-13 mths of age (1 mth post dose 2) ; at 13-17 mths of age (pre-booster dose) ; at 14-18 mths of age ( 1 mths post-booster) ; at 23-27 mths of age (10 mths post-booster)

Notes:

[45] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This end point analysis has been performed on 7-11M subjects

End point timeframe:

Period of follow-up was anytime after the administration of first vaccine dose till the end of the blinded invasive disease (ID) Follow-up period (31 January 2012).

Notes:

[54] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This end point analysis has been performed on 7-11M subjects

End point values	10Pn7-11M/053 Group	Ctrl7-11M/053 Group		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	191	96		
Units: Participants per 1000 person-years				
number (confidence interval 95%)	497.301 (410.212 to 597.410)	581.807 (453.547 to 735.078)

### **Secondary: PERSON YEAR RATE AS REGARDS SUBJECTS WITH ACUTE OTITIS MEDIA (AOM) EPISODE ASSESSED AS WITH LEVEL 1 OF DIAGNOSTIC CERTAINTY AND ACCOMPANIED WITH DOCUMENTED ANTIMICROBIAL PRESCRIPTION. IN SUBJECTS RECEIVING 12-18M SCHEDULE OF 10PN**

End point title	PERSON YEAR RATE AS REGARDS SUBJECTS WITH ACUTE OTITIS MEDIA (AOM) EPISODE ASSESSED AS WITH LEVEL 1 OF DIAGNOSTIC CERTAINTY AND ACCOMPANIED WITH DOCUMENTED ANTIMICROBIAL PRESCRIPTION. IN SUBJECTS RECEIVING 12-18M SCHEDULE OF 10PN <sup>[55]</sup>
-----------------	---

End point description:

The PYAR (Person-Year Rate) as regards subjects with AOM episode was tabulated. PYAR was calculated as follows  $n$  (= number of subjects reported with event) divided by  $T$  (= sum of follow-up period expressed in years) (per 1000). An AOM episode assessed as with level 1 of diagnostic certainty was defined as an AOM event diagnosed by a physician according to the Finnish AOM management guidelines (confirmed cases) and reported by subjects' parent(s)/guardian(s) regardless the documentation in medical records or other source document. Note that a post-hoc re-analysis of AOM endpoints with a corrected definition of follow-up taking into account individual end of follow-up time was performed; the results of re-analysis as the most prominent for AOM outcome are presented in this summary.

## Adverse events

---

### Adverse events information

---

Timeframe for reporting adverse events:

Solicited & unsolicited AEs: 4-day & 31-day post primary/booster vaccination. SAEs from Day 0 to study end: Month (M)18 for 6W-6M groups, M16 for 7-11M groups and M9 for M12-18 groups. Non-serious AE Threshold=4.98% but corrected to 5% (system constraint)

---

Adverse event reporting additional description:

To avoid inconsistency between the AE reporting and the acute otitis media (AOM) questionnaire filled in by subjects' parent(s)/LAR(s), otitis was not reported as an AE if already reported via the AOM questionnaire. Number of occurrences were not available at the time of the analysis, then put equal to number of subjects affected.

### Reporting groups

Reporting group title	Ctrl3+1-6W-6M/053 Group
-----------------------	-------------------------

---

Reporting group description:

Subjects in this group were subjects enrolled in the 10PN-PD-DIT-053 (NCT00839254 - EUDRACT 2008-006551-51) study, aged 6 weeks to 6 months at enrolment. Subjects received the Engerix B (called also HBV vaccine) according to a 3-dose primary vaccination schedule with an interval of at least 4 weeks between doses followed by a booster dose of the same vaccine with an interval of preferably 6 months since the previous vaccine dose (minimum 4 months) (3+1 Infant Schedule). The vaccine was administered intramuscularly in the thigh.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 December 2008	Protocol amendment 1, dated 11 December 2008, implemented the following: 1) Addition of 6 clusters located in municipalities where no agreement from the health care center responsible for the municipality primary health care and well-baby clinics had been obtained for participation in the 10PN-PD-DIT-043 study (i.e. Espoo, Vantaa and surroundings municipalities); 2) The addition of a nasopharyngeal swab sampling at the pre-vaccination time point for subjects enrolled within the first 7 months of life and who were part of the Immuno subset and for all subjects enrolled between 7-11 months of age.; 3) Recording of Bacille Calmette Guerin (BCG) vaccination since birth up to 30 days before the first study vaccination; 4) The addition of a sample size justification for acute otitis media (AOM) endpoint; 5) The addition of Infanrix Polio+Hib vaccine as a non-study vaccine to be offered to all subjects in order to comply with the national immunization recommendations; 6) The addition of Rotarix as a non-study vaccine to be offered to children within the first 6 months of life; 7) Physical examination was made optional after Visit 1 (screening), 8) Attribution of a treatment number was added as a study procedure for each vaccination visit.
18 February 2009	Protocol amendment 2, dated 18 February 2009, implemented the following changes: 1) Addition of collection of data on respiratory tract infections (RTIs), including detailed acute otitis media (AOM) diagnosis data in a subset of subjects in Turku area; 2) Inclusion of municipalities surrounding Oulu in the list of municipalities where no collaboration with health care centers had been set up in study 10PN-PD-DIT-043 but where there was opportunity for parent(s)/LARs to let their child participate in study 10PN-PD-DIT-053 (i.e. Espoo, Vantaa and surroundings municipalities and municipalities surrounding Oulu); 3) The National Public Health Institute (KTL) and the National Research and Development Centre for Welfare and Health (STAKES) had merged to the National Institute for Health and Welfare (THL); 4) Clarification was added in some tables concerning the age at enrolment; 5) Correction of the interval between some study visits; 6) Wording concerning the Immuno subset was changed to ensure that the subjects in this subset would be enrolled according to the age and treatment groups; 6) Deletion of the specification of the injection side.
17 November 2009	Protocol amendment 3, dated 17 November 2009, implemented the following change. Because a higher number of non-evaluable subjects for according-toprotocol (ATP) analysis due to the flu pandemic in 2009 was anticipated and the recruitment rate was lower than expected, especially in the catch-up cohorts (7-18 months of age at enrolment), the target numbers of subjects to be recruited per age group was changed and the recruitment time was extended in order to secure the AOM objective which was related to the infant vaccination cohort (< 7 months of age at enrolment) based on the ATP cohort.

12 August 2011	<p>Protocol amendment 4, dated 12 August 2011, was developed for the following reasons: 1) The conditions for triggering IPD effectiveness analysis in this study were linked to the 10PN-PD-DIT-043 study. As the 10PN-PD-DIT-043 study enrolment reached only 50% of the initial recruitment plan, there was a need to redefine the conditions for triggering IPD effectiveness analysis in that study. Consequently, this change was reflected in the 10PN-PD-DIT-053 protocol; 2) In order to align the timing of unblinding (planned after cleaning of the clinical database from both studies) with the 10PN-PD-DIT-043 study, the age range for the last study visit for subjects enrolled between 6 weeks and 6 months of age was enlarged from 21-22 months of age to 18-22 months of age; 3) The protocol was adjusted to reflect the Independent Data Monitoring Committee (IDMC) recommendation to evaluate the chest X-rays from the hospital-diagnosed pneumonia cases in this study by an independent review panel according to WHO guidelines for study purposes, as in the 10PN-PD-DIT-043 study; 4) GSK Biologicals had decided to maintain pneumococcal enzyme-linked immunosorbent assay (ELISA) testing but not to perform the pneumococcal opsonophagocytic activity (OPA) and anti-protein D ELISA testing in the 7-11 and 12-18 months of age groups part of the immuno subset for the following reasons: a) The WHO considers the antibody concentration measured by the ELISA assay as the main licensure criterion for new pneumococcal conjugate vaccines and the outcome of the OPA testing on samples obtained one month post-primary vaccination as supportive for licensure, b) These tests in the catch-up groups were not linked to the primary objective of the study, i.e. IPD effectiveness in the infant cohort; 5) Further details on microbiological testing were included and additional minor corrections were done.</p>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Number allocation errors were identified for 3 subjects after Dose 1, which GSK assessed as not having significant impact. Lower & upper respiratory tract infections endpoint results are not presented, being uninterpretable due to low sample size.
