

## Clinical trial results:

**A phase I/II, open-label, dose-escalating study to evaluate the safety, tolerability and pharmacokinetics of twice daily oral midostaurin and to evaluate the preliminary clinical and pharmacodynamic response in pediatric patients with relapsed or refractory leukemia**

### Summary

EudraCT number	2008-006931-11
Trial protocol	FR SE NL IT
Global end of trial date	21 October 2014

### Results information

Result version number	v1 (current)
This version publication date	13 July 2016
First version publication date	02 August 2015

### Trial information

#### Trial identification

Sponsor protocol code	CPKC412A2114
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00866281
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000780-PIP01-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 September 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	21 October 2014
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The main objective of the study was to estimate the maximum tolerated dose (MTD) or to identify the recommended dose for expansion (RDE) for two age groups (3 months to 2 years, and 2 years to 18 years) of pediatric subjects with acute myeloid leukemia (AML) or mixed lineage leukemia gene-rearranged acute lymphoblastic leukemia (MLL) based on the rate of dose-limiting toxicity (DLT) of midostaurin administered orally.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 September 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 5
Country: Number of subjects enrolled	Sweden: 5
Country: Number of subjects enrolled	France: 2
Country: Number of subjects enrolled	Italy: 8
Country: Number of subjects enrolled	United States: 2
Worldwide total number of subjects	22
EEA total number of subjects	20

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	11

Children (2-11 years)	2
Adolescents (12-17 years)	9
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The study was conducted at 8 centres in 5 countries.

### Pre-assignment

Screening details:

A total of 22 subjects were enrolled in the study.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

As the study was an open-label study, this section was not applicable.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort 1: Midostaurin (30 milligrams/meters <sup>2</sup> )

Arm description:

Subjects received body-weight and body surface area (BSA) stratified dose of midostaurin 30 mg/m<sup>2</sup> twice daily (bid) through oral route. The total daily dose in 30 mg/m<sup>2</sup> bid cohort was 60 mg/m<sup>2</sup>.

Arm type	Experimental
Investigational medicinal product name	Midostaurin
Investigational medicinal product code	PKC412
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Midostaurin 25 mg/mL oral solution was administered bid per BSA (m<sup>2</sup>) and dose was increased until either the MTD was determined or a 60 mg/m<sup>2</sup> bid dose was reached.

<b>Arm title</b>	Cohort 2: Midostaurin (60 mg/m <sup>2</sup> )
------------------	---

Arm description:

Subjects received body-weight and BSA stratified dose of midostaurin 30 mg/m<sup>2</sup> bid through oral route. The total daily dose in 60 mg/m<sup>2</sup> bid cohort was 120 mg/m<sup>2</sup>.

Arm type	Experimental
Investigational medicinal product name	Midostaurin
Investigational medicinal product code	PKC412
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Midostaurin 25 mg/mL oral solution was administered bid per BSA (m<sup>2</sup>) and dose was increased until either the MTD was determined or a 60 mg/m<sup>2</sup> bid dose was reached.

Number of subjects in period 1	Cohort 1: Midostaurin (30 milligrams/meters <sup>2</sup> )	Cohort 2: Midostaurin (60 mg/m <sup>2</sup> )
Started	7	15
Completed	0	0
Not completed	7	15
Consent withdrawn by subject	3	-
Disease progression	3	11
Adverse event, non-fatal	1	-
New cancer therapy	-	4

## Baseline characteristics

### Reporting groups

Reporting group title	Cohort 1: Midostaurin (30 milligrams/meters <sup>2</sup> )
Reporting group description: Subjects received body-weight and body surface area (BSA) stratified dose of midostaurin 30 mg/m <sup>2</sup> twice daily (bid) through oral route. The total daily dose in 30 mg/m <sup>2</sup> bid cohort was 60 mg/m <sup>2</sup> .	
Reporting group title	Cohort 2: Midostaurin (60 mg/m <sup>2</sup> )
Reporting group description: Subjects received body-weight and BSA stratified dose of midostaurin 30 mg/m <sup>2</sup> bid through oral route. The total daily dose in 60 mg/m <sup>2</sup> bid cohort was 120 mg/m <sup>2</sup> .	

Reporting group values	Cohort 1: Midostaurin (30 milligrams/meters <sup>2</sup> )	Cohort 2: Midostaurin (60 mg/m <sup>2</sup> )	Total
Number of subjects	7	15	22
Age categorical Units: Subjects			
Infants and toddlers (28 days-23 months)	2	9	11
Children (2-11 years)	1	1	2
Adolescents (12-17 years)	4	5	9
Age continuous Units: years			
arithmetic mean	9.65	6.5	
standard deviation	± 7.479	± 6.903	-
Gender categorical Units: Subjects			
Female	5	10	15
Male	2	5	7

## End points

### End points reporting groups

Reporting group title	Cohort 1: Midostaurin (30 milligrams/meters <sup>2</sup> )
Reporting group description: Subjects received body-weight and body surface area (BSA) stratified dose of midostaurin 30 mg/m <sup>2</sup> twice daily (bid) through oral route. The total daily dose in 30 mg/m <sup>2</sup> bid cohort was 60 mg/m <sup>2</sup> .	
Reporting group title	Cohort 2: Midostaurin (60 mg/m <sup>2</sup> )
Reporting group description: Subjects received body-weight and BSA stratified dose of midostaurin 30 mg/m <sup>2</sup> bid through oral route. The total daily dose in 60 mg/m <sup>2</sup> bid cohort was 120 mg/m <sup>2</sup> .	
Subject analysis set title	AML subjects
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects with acute myeloid leukemia (AML) and received body-weight stratified dosage midostaurin 30 or 60 mg/m <sup>2</sup> .	
Subject analysis set title	MLLr-ALL subjects
Subject analysis set type	Sub-group analysis
Subject analysis set description: Subjects with mixed lineage leukemia gene- rearranged acute lymphoblastic leukemia (MLLr-ALL) and received body-weight stratified dosage midostaurin 30 or 60 mg/m <sup>2</sup> .	

### Primary: Maximum tolerated dose (MTD) of midostaurin- Posterior probability of DLT

End point title	Maximum tolerated dose (MTD) of midostaurin- Posterior probability of DLT <sup>[1]</sup>
End point description: MTD was defined as highest dose level for which no more than 1 subject in a dose cohort experienced dose limiting toxicity(DLT), based on a Bayesian logistic regression model (BLRM) employing the escalation with overdose control(EWOC) principle. A DLT was defined as a grade 3 or 4 non-hematological adverse event(AE) or abnormal laboratory value related to study drug. MTD was not achieved since no more than 1 DLT was observed in any cohort. At the 60mg/m <sup>2</sup> dose level, 1 DLT was observed in younger stratum, thus, midostaurin 60 mg/m <sup>2</sup> was selected as recommended dose for dose escalation phase. Mean and the 95% posterior probability estimates of having a DLT by age strata and dose is presented. Estimation of MTD and/or RDE at the dose-escalation phase of the study was based upon the estimation of the probability of DLT for subjects in the dose-determining set (DDS). The analysis done in dose-determining set(DDS) population. 'n' signifies the number of evaluable subjects for this measure.	
End point type	Primary
End point timeframe: Baseline, End of dose escalation phase	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive summary statistics was planned for this primary outcome measure.

End point values	Cohort 1: Midostaurin (30 milligrams/meters <sup>2</sup> )	Cohort 2: Midostaurin (60 mg/m <sup>2</sup> )		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	6	11		
Units: probability estimates				
arithmetic mean (inter-quartile range (Q1-Q3))				

Younger stratum ( $\geq 3$ months - $\leq 2$ years): (n=2, 5)	0.03 (0 to 0.16)	0.1 (0.01 to 0.33)		
Older stratum ( $>2$ years - $<18$ years): (n=4, 6)	0.03 (0 to 0.13)	0.08 (0.01 to 0.26)		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Percentage of subjects with best overall response by indication

End point title	Percentage of subjects with best overall response by indication
-----------------	---

End point description:

The best overall clinical response was determined as per the clinical assessment done by the investigator. Responders were defined as all subjects with a best clinical response of leukemia free state, morphological complete remission, incomplete morphological complete remission, partial remission, bone marrow blast response, bone marrow minor blast response, peripheral blood blast response, minor peripheral blood blast response. Subjects with stable disease, progressive disease and with missing tumour assessment or who discontinued the study or who died before having their first assessment were considered as non-responders. The analysis was performed in full analysis set (FAS) population, defined as all subjects to whom study treatment was assigned.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Day 15 (Day 1 of Cycle 2), Day 22 (Day 8 of Cycle 2), Day 29 (Day 1 of Cycle 9), End of treatment

End point values	AML subjects	MLLr-ALL subjects		
Subject group type	Subject analysis set	Subject analysis set		
Number of subjects analysed	9	13		
Units: Percentage of subjects				
number (not applicable)				
Leukemia free state	0	0		
Morphological complete remission	0	0		
Incomplete morphological complete remission	11.1	0		
Partial remission	0	0		
Bone marrow blast response	22.2	0		
Bone marrow minor blast response	0	0		
Peripheral blood blast response	11.1	23.1		
Minor peripheral blood blast response	11.1	0		
Stable disease	44.4	7.7		
Progressive disease	0	61.5		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Time to response with midostaurin

End point title	Time to response with midostaurin
-----------------	-----------------------------------

End point description:

Time to response was defined as the time from the date of start of midostaurin treatment to the date of first response. Time to response was calculated by using the formula = (date of first response - date of start of midostaurin) + 1 day. Here, "Number of subjects analysed" signifies number of responders at specified time points for each arm, respectively. The analysis was performed in FAS population.

End point type	Secondary

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of subjects with adverse events (AEs), serious adverse events (SAEs), treatment related AEs or SAEs and death during the study

End point title	Number of subjects with adverse events (AEs), serious adverse events (SAEs), treatment related AEs or SAEs and death during the study
-----------------	---

End point description:

An AE was defined as any unfavorable and unintended sign, symptom, or disease temporally associated with the use of study drug, whether or not related to study drug. A SAE was defined as an event which was fatal or life threatening, required or prolonged hospitalization, was significantly or permanently disabling or incapacitating, constituted a congenital anomaly or a birth defect, or encompassed any other clinically significant event that could jeopardize the subject or require medical or surgical intervention to prevent one of the aforementioned outcomes. Treatment related AEs or SAEs were defined as AEs or SAEs that were suspected to be related to study treatment as per investigator. On treatment death was a fatal event leading to permanent cessations of all vital functions of the body. The analysis was performed in safety set population, defined as the subjects who received at least one dose of midostaurin.

End point type	Secondary

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Adverse events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All adverse events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 November 2009	1. The exclusion criteria was modified to allow intrathecal chemotherapy and short courses of corticosteroids as per standard practice for pediatric leukemia. 2.The pharmacokinetic (PK) objective was clarified to evaluate population PK, a term that included peak, trough, and profile. 3.The response criteria were modified in order to provide a definition for treatment failure based on peripheral blood criteria.
11 October 2010	The instructions for midostaurin administration were modified.
02 April 2013	1.The exclusion criteria were modified to allow the subjects who previously treated with sorafenib. 2. The primary objective was modified such way that the milestone of MTD was supplemented with that for RDE, as the dose escalation was constrained to the highest dose of oral midostaurin administered in children, which did not exceed the equivalent adult dose of 100 mg bid. 3.The biomarkers objectives were changed from secondary to exploratory to more accurately reflect the intent of these assessments to generate future hypotheses.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated early since despite considerable efforts to boost recruitment, no new subjects were enrolled in the final year of this study.

Notes:
