Analysis stage	Final
Date of interim/final analysis	04 January 2016
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 June 2015
Global end of trial reached?	Yes
Global end of trial date	26 June 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to test our primary hypothesis which states that the commonest cause of resistant hypertension is excessive sodium retention, and that further diuretic therapy, i.e. spironolactone will be superior to other potential "add-on drugs" for people with inadequate blood pressure control despite treatment with three drugs, i.e. Ace Inhibitors, Calcium Channel Blockers and Diuretics (A+C+D).

Protection of trial subjects:

Serious Adverse Events were documented and reported to the Chief Investigator and to regulatory authorities, in accordance with local and national requirements. The study was approved by Cambridgeshire Research Ethics Committee and all participants gave written informed consent. A Study Steering Committee was responsible for evaluating and reporting the results of the trial.

Subject disposition

Recruitment

Recruitment details:

Between May 15, 2009, and July 8, 2004, we screened 436 patients from 12 secondary and two primary sites in the UK for this 12-month randomized crossover trial

Pre-assignment

Screening details:

We screened 436 and enrolled 335 patients aged 18-79 with seated CSBP ≥ 140 mm Hg (or ≥ 135 mm Hg in case of diabetics) and HSBP (18 readings over 4 days) ≥ 130 mm Hg, despite treatment for at least 3 months with maximally tolerated doses of three drugs.

Pre-assignment period milestones

Number of subjects started	436 ^[1]
----------------------------	--------------------

Number of subjects completed	335 ^[2]
------------------------------	--------------------

Pre-assignment subject non-completion reasons

Reason: Number of subjects	not eligible: 88
----------------------------	------------------

Reason: Number of subjects	did not take study drug: 13
----------------------------	-----------------------------

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 88 patients were excluded as not eligible ,13 did not take study drug

[2] - The number of subjects reported to be in the pre-assignment period is not consistent with the number starting period 1. It is expected that the number completing the pre-assignment period are also present in the arms in period 1.

Justification: 88 patients were excluded as not eligible ,13 did not take study drug

Period 1

Period 1 title	Overall trial (overall period)
----------------	--------------------------------

Is this the baseline period?	Yes
------------------------------	-----

Allocation method	Randomised - controlled
-------------------	-------------------------

Blinding used	Double blind
---------------	--------------

Roles blinded	Subject, Investigator
---------------	-----------------------

Blinding implementation details:

Patients rotated through 4 cycles of: 1) spironolactone 25-50 mg, 2) doxazosin 4-8 mg, 3) bisoprolol 5-10 mg, and 4) placebo. The complete set of permutations of the sequence order for the treatments were randomly ordered using computer generated pseudo random numbers. Study sites received the allocations for participants via a web-based randomization system. The study drugs were masked by re-encapsulation. Investigators/patients were masked to the identity of drugs, and to their sequence allocation.

Arms

Are arms mutually exclusive?	No
------------------------------	----

Arm title	Spironolactone
-----------	----------------

Arm description:

Patients received spironolactone 25 mg for weeks 0-6. The dose was doubled in weeks 6-12
