

## Clinical trial results:

### A Randomized, Double-Blind, Placebo-Controlled, Multicenter Study to Evaluate the Efficacy, Safety, and Tolerability of JNJ-42160443 as Adjunctive Therapy in Subjects With Cancer-Related Pain, Followed by an Open-Label Extension Phase

Due to the EudraCT – Results system being out of service between 31 July 2015 and 12 January 2016, these results have been published in compliance with revised timelines.

## Summary

EudraCT number	2008-007690-21
Trial protocol	FR ES PT IT NL
Global end of trial date	19 January 2015

## Results information

Result version number	v1 (current)
This version publication date	28 July 2016
First version publication date	28 July 2016

## Trial information

### Trial identification

Sponsor protocol code	42160443PAI2001
-----------------------	-----------------

### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00929188
WHO universal trial number (UTN)	-

Notes:

Notes:

## Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 January 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 January 2015
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study was to evaluate the analgesic efficacy, safety, and tolerability of a single subcutaneous (SC) dose [9 milligram (mg) in 0.3 milliliter (mL)] of JNJ-42160443 compared with placebo as adjunctive therapy to standard pain therapy in subjects with inadequately controlled, moderate to severe, chronic, cancer-related pain. This study was an adjunctive trial with the addition of fulranumab to pre-existing inadequate analgesia regimen; the Double-Blind period was 1 month in duration with 1 dose of study medication.

Protection of trial subjects:

Safety evaluations included the collection of adverse events, clinical laboratory tests (including Serum chemistry, hematology, urinalysis and serum pregnancy test), vital signs, physical examinations, Electrocardiograms, Injection-Site Evaluations, Neurologic Examination and Assessment of Joint Safety.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 September 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 16
Country: Number of subjects enrolled	Poland: 24
Country: Number of subjects enrolled	Portugal: 14
Country: Number of subjects enrolled	United States: 44
Worldwide total number of subjects	98
EEA total number of subjects	54

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	71
From 65 to 84 years	26
85 years and over	1

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted in 22 sites in 4 countries from 24 September 2009 to 19 January 2015. Other countries (for example, Italy and Netherlands) are not included in trial information as no subjects were enrolled in these countries.

### Pre-assignment

Screening details:

98 subjects were analyzed in the double-blind phase out of which 71 subjects were entered into open-label phase

### Period 1

Period 1 title	Double-Blind Treatment Phase
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Subjects received placebo subcutaneous (SC) injection once on Day 1 in Double-blind treatment phase.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received placebo subcutaneous (SC) injection once on Day 1 in Double-blind treatment phase.

<b>Arm title</b>	Fulranumab
------------------	------------

Arm description:

Subjects received Fulranumab [9 milligram (mg) in 0.9 millilitre (mL)] SC once on Day 1 in Double-blind treatment phase.

Arm type	Experimental
Investigational medicinal product name	Fulranumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received Fulranumab [9 milligram (mg) in 0.9 millilitre (mL)] SC once on Day 1 in Double-blind treatment phase.

<b>Number of subjects in period 1</b>	Placebo	Fulranumab
Started	31	67
Completed	29	54
Not completed	2	13
Physician decision	1	1
Consent withdrawn by subject	1	1
Adverse serious fatal	-	8
Adverse event	-	3

## Period 2

Period 2 title	Open-Label Extension Phase
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

## Arms

<b>Arm title</b>	Fulranumab
------------------	------------

### Arm description:

Subjects received Fulranumab (9 mg in 0.9 mL) SC once every 4 weeks for a maximum of 12 doses in Open-label phase

Arm type	Experimental
Investigational medicinal product name	Fulranumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

### Dosage and administration details:

Subjects received Fulranumab (9 mg in 0.9 mL) SC once every 4 weeks for a maximum of 12 doses in Open-label phase

<b>Number of subjects in period 2<sup>[1]</sup></b>	Fulranumab
Started	71
Completed	6
Not completed	65
Consent withdrawn by subject	10
Sponsor discontinued cohort/ study	3
Adverse event, non-fatal	6
Death	32
Other	7

Unknown	1
Investigator decision	6

---

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Please note that the subjects enrolled in the open label period is not the same as of Double bling treatment period.

Subjects who completed the double-blind treatment phase were eligible to enter the open-label extension phase, based on the judgment of the investigator and consistent with subject safety.

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Subjects received placebo subcutaneous (SC) injection once on Day 1 in Double-blind treatment phase.

Reporting group title	Fulranumab
-----------------------	------------

Reporting group description:

Subjects received Fulranumab [9 milligram (mg) in 0.9 millilitre (mL)] SC once on Day 1 in Double-blind treatment phase.

Reporting group values	Placebo	Fulranumab	Total
Number of subjects	31	67	98
Title for AgeCategorical Units: subjects			
Adults (18-64 years)	23	48	71
From 65 to 84 years	8	18	26
85 years and over	0	1	1
Title for AgeContinuous Units: years			
arithmetic mean	56.1	59.4	
standard deviation	± 12.12	± 10.73	-
Title for Gender Units: subjects			
Female	10	32	42
Male	21	35	56

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description: Subjects received placebo subcutaneous (SC) injection once on Day 1 in Double-blind treatment phase.	
Reporting group title	Fulranumab
Reporting group description: Subjects received Fulranumab [9 milligram (mg) in 0.9 millilitre (mL)] SC once on Day 1 in Double-blind treatment phase.	
Reporting group title	Fulranumab
Reporting group description: Subjects received Fulranumab (9 mg in 0.9 mL) SC once every 4 weeks for a maximum of 12 doses in Open-label phase	
Subject analysis set title	Intent to treat (ITT)
Subject analysis set type	Intention-to-treat
Subject analysis set description: All randomly assigned subjects who had received the single injection of fulranumab or placebo in the double-blind treatment phase.	

### Primary: Change in Average Cancer-Related Pain Intensity Score From Baseline to end of Double Blind Phase (LOCF)

End point title	Change in Average Cancer-Related Pain Intensity Score From Baseline to end of Double Blind Phase (LOCF)
End point description: Average cancer-related pain intensity score is defined as the difference between the value at the end of the double-blind phase and the baseline value. Subjects were asked to assess the average pain intensity on a 11-point Numerical Rating Scale (NRS) ranging from 0 (no pain) to 10 (maximum pain imaginable) by selecting a number applicable to their pain on the scale. Here, data is collected by last observation carried forward (LOCF) approach.	
End point type	Primary
End point timeframe: Baseline and End of double blind phase (Week 4)	

End point values	Placebo	Fulranumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	31 <sup>[1]</sup>	67 <sup>[2]</sup>		
Units: Units on a scale				
arithmetic mean (standard deviation)				
Baseline	6.4 (± 1.36)	5.9 (± 1.56)		
Change from Baseline	-0.7 (± 1.56)	-0.8 (± 1.26)

**Secondary: Change From Baseline in Brief Pain Inventory – Short Form (BPI-SF) Pain Intensity and Pain Interference Subscale Score**

---

End point title	Change From Baseline in Brief Pain Inventory – Short Form (BPI-SF) Pain Intensity and Pain Interference Subscale Score
-----------------	--

End point description:

The BPI-sf consists of 15 Items (Item 1:presence of pain; Item 2:pain location; Items 3 to 6:pain severity; Item 7:status of pain treatment; Item 8:efficacy of pain treatment; and Items 9a to 9g: interference of pain with daily life). Pain interference sub-scale score ranges from 0 (do not interfere) to 10 (completely interferes). Higher scores indicates worsening. Total score is defined as the mean scores from Items 3, 4, 5, 6 and 9 recorded on an 11-point scale where 0 = no pain and 10 = pain as bad as you can imagine. Lower score indicates an improvement in pain. Here 'n' signifies number of subjects analyzed at specific timepoint

occurrences (all)	6	2	

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 March 2010	Amendment was made to reduce the number of clinic visits, to limit the number and type of assessments, and add clarifications on some of the prohibitions and restrictions based on feedback from the Investigators. These included: Pharmacogenomic consent, testing, and analysis was eliminated to reduce the visit time and total blood volume based on feedback from the Investigators. The number of clinic visits and assessments were reduced to reduce burden on subjects. Inclusion criteria and prohibitions and restrictions were clarified that subjects cannot donate blood or sperm from screening to 6 months after the last study drug injection. Exclusion criteria was added: Subjects enrolled in an investigational study for an analgesic need to be washed out for 4 weeks, not 8 weeks, or 5 half lives, whichever was longer.
07 April 2010	Amendment allowed subjects at some European sites the option to use a paper diary in place of an e-diary for daily numerical rating scale (NRS) pain and opioid breakthrough pain medication entries. Subjects were to stay on the same type of diary throughout the course of the study. Site staff personnel were to transcribe data from paper diary to an electronic format approved by the sponsor.
18 June 2010	Amendment was made to correct inconsistent statement at the request of an Institutional Review Board (IRB). The following text from safety evaluations, informed consent and privacy of personal data was removed because the inclusion criteria did not allow for subjects who could not make decisions on the own: "or a legally acceptable representative". Also, the following text from Attachment 9 for Weeks 5 and 6 telephone visits was removed: "Please indicate the approximate time and dose amount of each dose of opioid breakthrough pain medication each time a dose is taken."
23 June 2010	Amendment was made to incorporate the changes of Amendment dated on 18-Jun-2010 into the protocol being used at European sites.
25 May 2011	<p>After clinical hold, the targeted population was changed to terminally ill cancer subjects as per the judgment of the investigator (example, subjects who were in or who were candidates for hospice/palliative care for end-of-life management). Prior to the clinical hold, the study enrolled cancer pain subjects on stable doses of baseline around-the-clock opioids (not including breakthrough medication doses) with a life expectancy of greater than 3 months.</p> <p>Based on the debilitated condition of subjects in the target population (that is, terminally ill subjects with cancer-related pain), the number of assessments and blood samples were reduced, the requirements for the injection-site evaluation performed by the subject and the Total Neuropathy Score-Nurse (TNSn) and Mini Mental State Examination (MMSE) performed before administration of each dose of study drug were deleted, the collection of pain assessment scores was simplified (by using paper diaries instead of electronic diaries) and allowing trained caregivers to assist subjects in completing the diaries, and flexibility was added for some safety assessments to reduce the burden to the subjects.</p> <p>The stopping rules for the study and the characterization of hepatic failure and acute renal failure as events of interest were revised. The inclusion and exclusion criteria, and prohibitions and restrictions were modified to reflect common therapies used and comorbidities observed in the terminally ill population. The requirement for a urine pregnancy test was deleted because pregnancy was unlikely to be a risk in this terminally-ill population.</p>
