

Clinical trial results:

A Multi-Center, Randomized, Double-Blind, Placebo Controlled Trial of the Safety of Rilonacept for the Prophylaxis of Gout Flares in Patients on Urate-Lowering Therapy.

Summary

EudraCT number	2008-007784-16
Trial protocol	DE
Global end of trial date	14 January 2011

Results information

Result version number	v1
This version publication date	31 March 2017
First version publication date	31 March 2017

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 February 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 January 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to assess the safety and tolerability of 160 mg of subcutaneous (SC) therapy with Rilonacept in the prophylaxis of gout flares in subjects on uric acid-lowering therapy.

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with the International Conference on Harmonisation (ICH) guidelines for Good Clinical Practice (GCP) and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 March 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 14
Country: Number of subjects enrolled	India: 22
Country: Number of subjects enrolled	Indonesia: 14
Country: Number of subjects enrolled	South Africa: 570
Country: Number of subjects enrolled	Taiwan: 11
Country: Number of subjects enrolled	United States: 684
Worldwide total number of subjects	1315
EEA total number of subjects	14

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	1110
From 65 to 84 years	205
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 71 study sites in United States and rest of world (ROW) between 23 March 2009 to 14 January 2011. A total of 2311 subjects were screened in the study.

Pre-assignment

Screening details:

Out of 2311 subjects, 1315 were randomized and treated in the study. Subjects were randomized in 3:1 ratio to receive Rilonacept 160 mg or placebo.

Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Two subcutaneous injections of Placebo (for Rilonacept) as a loading dose on Day 1 followed by a single injection once a week (qw) from Week 1 to Week 15.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection in left and right upper arm, the left and right abdomen, and the left and right thigh.

Arm title	Rilonacept 160 mg
------------------	-------------------

Arm description:

Two subcutaneous injections of Rilonacept 160 mg (for a total of 320 mg) as a loading dose on Day 1, followed by a single 160 mg injection of Rilonacept qw from Week 1 to Week 15.

Arm type	Experimental
Investigational medicinal product name	Rilonacept
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subcutaneous injection in left and right upper arm, the left and right abdomen, and the left and right thigh.

Number of subjects in period 1	Placebo	Rilonacept 160 mg
Started	330	985
Completed	276	824
Not completed	54	161
Other than specified above	3	10
Consent withdrawn by subject	15	36
Death	2	2
Adverse event	10	46
Decision by the Sponsor	4	8
Lost to follow-up	13	39
Lack of efficacy	1	2
Protocol deviation	6	18

Primary: Percentage of Subjects With Treatment-Emergent Adverse Events (TEAEs)

End point title	Percentage of Subjects With Treatment-Emergent Adverse Events (TEAEs) ^[1]
End point description: Any untoward medical occurrence in a subject who received investigational medicinal product (IMP) was considered an AE without regard to possibility of causal relationship with this treatment. Treatment-emergent adverse events (TEAEs) were defined as AEs that developed or worsened or became serious during on-treatment period (time from the administration of first dose of study drug up to 35 days after the last dose of study drug). A serious adverse event (SAE) was defined as any untoward medical occurrence that resulted in any of the following outcomes: death, life-threatening, required initial or prolonged in-patient hospitalization, persistent or significant disability/incapacity, congenital anomaly/birth defect, or considered as medically important event. Any TEAE included subjects with both serious and non-serious AEs. Safety analysis set that included all subjects who received any study drug and safety analyses were based on the treatment received.	
End point type	Primary
End point timeframe: Baseline up to Week 20	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: As the endpoint is descriptive in nature, no statistical analysis is provided.	

End point values	Placebo	Rilonacept 160 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	330	935		
Units: percentage of participants				
number (not applicable)				
With at least 1 TEAE	59.1	66.6		
With TEAEs related to study drug	13	27.5		
With serious TEAEs	3.9	3.1		
With TEAEs resulting in drug Withdrawal	3.3	5		
With serious TEAEs resulting in drug withdrawal	1.8	1.1		
With TEAEs leading to study discontinuation	3	4.7		
With serious TEAE leading to study discontinuation	1.5	1		
Treatment emergent deaths	0.3	0.2

Secondary: Number of Gout Flares Per Subject Assessed From Day 1 to Day 112 (Week 16)

End point title	Number of Gout Flares Per Subject Assessed From Day 1 to Day 112 (Week 16)
End point description: A gout flare was defined as subject reported acute articular pain typical of a gout attack that required treatment with an anti-inflammatory therapeutic: had at least 3 of the following 4 signs or symptoms: joint swelling, tenderness, redness, and pain and with at least 1 of the following: rapid onset of pain, decreased range of motion, joint warmth or other symptoms similar to a prior gout flare. Number of gout flares per subject was reported for this outcome measure. For drop-outs, only flares occurred before Day 112 were counted, regardless whether the flares occurred during the treatment period or not. Full analysis set (FAS) that included all randomized subjects who received any study medication, and was based on the treatment allocated by the Interactive voice response system (IVRS) at randomization (as randomized). Here, number of subjects analyzed=subjects with available data for this endpoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events (AEs) were collected from signature of the informed consent form up to the final visit (Week 20) regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported adverse events are treatment-emergent adverse events that is AEs that developed/worsened during the 'on treatment period' (time from the administration of first dose of study drug up to 35 days after the last dose of study drug).

subjects affected / exposed	15 / 330 (4.55%)	52 / 985 (5.28%)	
occurrences (all)	21	74	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 November 2009	It included the following changes: -Specified that subjects with a history of inadequate urate-lowering response to allopurinol, or a history of allergic reaction, contraindication, or intolerance to allopurinol, were ineligible for the study (for those subjects treated with allopurinol); -Specified that who had an absolute or relative contraindication to naproxen, oral glucocorticoids (e.g, prednisolone, prednisone), and colchicine were ineligible for the study; and also specified stopping rules for discontinuation of study drug; -Clarified that mandatory immediate termination from the study was required if a subject becomes pregnant during the study.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
