

## Clinical trial results:

### A PHASE 3, MULTICENTRE, RANDOMIZED, CONTROLLED STUDY TO DETERMINE THE EFFICACY AND SAFETY OF CYCLOPHOSPHAMIDE, LENALIDOMIDE AND DEXAMETHASONE (CRD) versus MELPHALAN (200 mg/m<sup>2</sup>) FOLLOWED BY STEM CELL TRANSPLANT IN NEWLY DIAGNOSED MULTIPLE MYELOMA SUBJECTS

#### Summary

EudraCT number	2008-008599-15
Trial protocol	IT CZ SK HU
Global end of trial date	01 July 2024

#### Results information

Result version number	v1 (current)
This version publication date	16 February 2025
First version publication date	16 February 2025

#### Trial information

##### Trial identification

Sponsor protocol code	RV-MM-EMN-441
-----------------------	---------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01091831
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 January 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 July 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To compare the efficacy of the combination of lenalidomide with low-dose alkylating agents versus high-dose melphalan in newly diagnosed, symptomatic MM patients.

Protection of trial subjects:

The protocol for this study has been designed in accordance with the general ethical principles outlined in the Declaration of Helsinki. The review of this protocol by the IRB/EC and the performance of all aspects of the study, including the methods used for obtaining informed consent, must also be in accordance with principles enunciated in the declaration, as well as ICH Guidelines, Title 21 of the Code of Federal Regulations (CFR), Part 50 Protection of Human Subjects and Part 56 Institutional Review Boards.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 January 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Slovakia: 5
Country: Number of subjects enrolled	Czechia: 54
Country: Number of subjects enrolled	Hungary: 7
Country: Number of subjects enrolled	Italy: 258
Country: Number of subjects enrolled	Australia: 64
Country: Number of subjects enrolled	New Zealand: 1
Worldwide total number of subjects	389
EEA total number of subjects	324

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	368
From 65 to 84 years	21
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Multicenter, randomized, open label study designed to compare the efficacy and safety of lenalidomide with low-dose alkylating agents vs high-dose melphalan followed by stem cell support in newly diagnosed symptomatic MM patients who are 65 years or younger. It consists of 4 phases for each study subject: Pre-treatment, Treatment, Extension and FU.

### Pre-assignment

Screening details:

The pre-treatment period includes screening visits, performed at study entry. After providing written informed consent to participate in the study, patients will be evaluated for study eligibility. The screening period includes the availability of inclusion criteria.

### Period 1

Period 1 title	Induction
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	No
<b>Arm title</b>	RD Induction

Arm description:

Patients will start induction treatment with lenalidomide and dexamethasone (RD) for 4 cycles every 28 days:

- Lenalidomide will be given orally at the dose of 25 mg/d for 21 days followed by a 7 days rest period (day 22 to 28),

- Dexamethasone will be given orally at the dose of 40 mg on days 1, 8, 15, 22.

After 1-2 months from the completion of the last RD cycle, i.v. cyclophosphamide (CY) will be given at the dose of 3 g/m<sup>2</sup> followed by G-CSF (5-10 ug/kg/day starting at day 5 until completion of PBSC collection) to collect an adequate number of PBSC ( $\geq 4$  to  $10 \times 10^6$ /kg CD34+ cells). Patients who fail to collect the minimum of  $4 \times 10^6$ /kg CD34+ cells will receive either a second course of CY with higher dose of or G-CSF or it is allowed the association of G-CSF with Plerixafor, as per standard practice of every single institution, for a second mobilization according to physician willing. Patients who fail to collect a minimum of  $4 \times 10^6$ /kg CD34+ will be withdrawn from the study.

Arm type	Experimental
Investigational medicinal product name	Lenalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Lenalidomide will be given orally at the dose of 25 mg/d for 21 days followed by a 7 days rest period (day 22 to 28)

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral drops
Routes of administration	Oral use

Dosage and administration details:

Dexamethasone will be given orally at the dose of 40 mg on days 1, 8, 15, 22

<b>Arm title</b>	CY infusion
------------------	-------------

Arm description:

After 1-2 months from the completion of the last RD cycle, i.v. cyclophosphamide (CY) will be given at the dose of 3 g/m<sup>2</sup> followed by G-CSF (5-10 ug/kg/day starting at day 5 until completion of PBSC

collection) to collect an adequate number of PBSC ( $\geq 4$  to  $10 \times 10^6/\text{kg}$  CD34+ cells). Patients who fail to collect the minimum of  $4 \times 10^6/\text{kg}$  CD34+ cells will receive either a second course of CY with higher dose of or G-CSF or it is allowed the association of G-CSF with Plerixafor, as per standard practice of every single institution, for a second mobilization according to physician willing. Patients who fail to collect a minimum of  $4 \times 10^6/\text{kg}$  CD34+ will be withdrawn from the study.

Arm type	Experimental
Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

3 g/m<sup>2</sup>

Number of subjects in period 1	RD Induction	CY infusion
Started	387	315
Completed	315	256
Not completed	72	59
Adverse event, serious fatal	3	-
Consent withdrawn by subject	5	13
Physician decision	-	2
Adverse event, non-fatal	14	2

Lack of efficacy	38	29

## Period 2

Period 2 title	Consolidation
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
Arm title	ARM A (CRd)

Arm description:

Patients will start consolidation treatment with the association lenalidomide, cyclophosphamide and dexamethasone (CRD) for 6 cycles every 28 days:

- Lenalidomide will be given orally at the dose of 25 mg/d for 21 days followed by a 7 days rest period (day 22 to 28)
- Cyclophosphamide will be given orally at the dose of 300 mg/m<sup>2</sup> on days 1, 8, 15
- Dexamethasone will be given orally at the dose of 40 mg on days 1, 8, 15, 22.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Lenalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Lenalidomide will be given orally at the dose of 25 mg/d for 21 days followed by a 7 days rest period (day 22 to 28)

Investigational medicinal product name	Cyclophosphamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Cyclophosphamide will be given orally at the dose of 300 mg/m<sup>2</sup> on days 1, 8, 15

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral drops
Routes of administration	Oral use

Dosage and administration details:

Dexamethasone will be given orally at the dose of 40 mg on days 1, 8, 15, 22.

<b>Arm title</b>	ARM B (MEL200)
------------------	----------------

Arm description:

Patients will start consolidation treatment with melphalan 200 mg/m<sup>2</sup> followed by stem cell support (MEL200) for 1 cycle (if at least VGPR was achieved after the 1st MEL200) or 2 cycles (if  $\leq$  PR was achieved after the 1st MEL200)

- Melphalan will be given iv at the dose of 200 mg/m<sup>2</sup> for 1 day followed by stem cell support. The second MEL200 was performed 120 days after the first if  $\leq$  PR was achieved after the 1st MEL200.

Arm type	Experimental
Investigational medicinal product name	Melphalan
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Melphalan will be given iv at the dose of 200 mg/m<sup>2</sup> for 1 day followed by stem cell support. The second MEL200 was performed 120 days after the first if  $\leq$  PR was achieved after the 1st MEL200.

Number of subjects in period 2	ARM A (CRd)	ARM B (MEL200)
Started	129	127
Completed	106	117
Not completed	23	10
Adverse event, serious fatal	2	1
Consent withdrawn by subject	1	2
Adverse event, non-fatal	4	1

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 June 2010	Change of sponsor's legal representative.
30 September 2010	Amendment 1: The request for amendment was made necessary by new evidence emerging regarding the mobilization of peripheral stem cells, the definition of measurable disease, the doses of lenalidomide to be administered to patients with renal insufficiency, and the follow-up of patients with asymptomatic myeloma.
10 January 2011	Amendment 2: The amendment request was necessary because a substudy was introduced that will evaluate the outcome of minimal residual disease in patients who achieve at least one VGPR after consolidation therapy.
02 May 2011	Urgent Amendment ICF v. 2: the urgent substantial amendment regarding the modification to the information sheet/informed consent, for an update on the risks related to the use of Lenalidomide, following the AIFA communication of 6 April 2011 on the "Safety Lenalidomide" emergency.
25 July 2013	Amendment 3: The request for this amendment was necessary because there was an error in the definition of the parameters needed to size the study. The correction of these parameters did not change the final sizing of the study.
15 May 2018	Amendment 4: It was necessary to update the contacts of the Sponsor, the Principal Investigator of the study, pharmacovigilance, as well as update the criteria for evaluating the response of the disease. With this Amendment, the side effects of the drug Lenalidomide, the risks for the fetus and fertility (male and female), the confidentiality of the data and the appendix on the protection of confidentiality were also updated on the Information Sheet and Informed Consent Form.
28 January 2019	Amendment 5_AC CEC: Adding new drug depot.
13 December 2019	Amendment 6: It was made because a new version of the IB of the drug Lenalidomide was released; consequently, the updated Informed Consent is transmitted with the new side effects related to the drug Lenalidomide.
20 March 2020	Urgent Amendment 1: COVID updates.
27 October 2020	Amendment 7: The request for a substantial amendment was made necessary because a new version of the Investigator's Brochure for the drug Lenalidomide was released; consequently, the updated Informed Consent with the new side effects related to the drug Lenalidomide is being transmitted. In addition, following the change of name of the Foundation, the drug labels, the SAE and the Pregnancy Form have been updated.
05 September 2023	Amendment CEC-CET: Change from CEC to CET.
27 February 2024	Amendment 8: Central laboratory change, study duration updates, and drug information.

Notes:

---

## **Interruptions (globally)**

Were there any global interruptions to the trial? No

## **Limitations and caveats**

None reported
