Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 January 2010
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	07 January 2010
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study was to evaluate the efficacy of single doses of omalizumab compared with placebo in participants with refractory chronic idiopathic urticaria (CIU) receiving concomitant H1 antihistamine therapy. The secondary objectives were to evaluate the safety and efficacy of different dose levels of omalizumab in participants with refractory CIU, to evaluate the efficacy of omalizumab in participants with refractory CIU on the participant-reported, quality-of-life-related outcome measures and to evaluate the pharmacokinetics and pharmacodynamics of omalizumab in participants with refractory CIU.

Protection of trial subjects:

This study was conducted in accordance with the United States Food and Drug Administration (U.S. FDA) regulations, the International Conference on Harmonisation E6 Guideline for Good Clinical Practice, and applicable local, state, and federal laws, as well as other applicable country laws.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 March 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	United States: 77
Worldwide total number of subjects	90
EEA total number of subjects	13

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	5

Adults (18-64 years)	80
From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were screened from Week -2 to Week -1.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Data analyst, Subject

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Placebo
------------------	---------

Arm description:

Participants received a single subcutaneous placebo injection on Day 0 of the study. Participants remained on stable doses of their preallocation a chronic idiopathic urticaria (CIU) H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Participants received a single subcutaneous placebo injection on Day 0 of the study.

Arm title	Omalizumab 75 milligrams (mg)
------------------	-------------------------------

Arm description:

Omalizumab (Xolair) was administered subcutaneously on Day 0 of the study. Participants remained on stable doses of their preallocation CIU H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Arm type	Experimental
Investigational medicinal product name	Omalizumab
Investigational medicinal product code	
Other name	Xolair®
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

75 mg of omalizumab (Xolair) was administered subcutaneously on Day 0 of the study.

Arm title	Omalizumab 300 mg
------------------	-------------------

Arm description:

Omalizumab (Xolair) was administered subcutaneously on Day 0 of the study. Participants remained on stable doses of their preallocation CIU H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Omalizumab
Investigational medicinal product code	
Other name	Xolair®
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
300 mg of omalizumab (Xolair) was administered subcutaneously on Day 0 of the study.	
Arm title	Omalizumab 600 mg

Arm description:

Omalizumab (Xolair) was administered subcutaneously on Day 0 of the study. Participants remained on stable doses of their preallocation CIU H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Arm type	Experimental
Investigational medicinal product name	Omalizumab
Investigational medicinal product code	
Other name	Xolair®
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

600 mg of omalizumab (Xolair) was administered subcutaneously on Day 0 of the study.

Primary: Change in Urticaria Activity Score 7 (UAS7) From Baseline to Week 4

End point title	Change in Urticaria Activity Score 7 (UAS7) From Baseline to Week 4
End point description: The UAS is a composite diary-recorded score, which is the sum of the numeric severity intensity ratings (0 = none to 3 = intense) for 1) the number of wheals (hives) and 2) the intensity of the pruritus (itch). The UAS7 is the sum of the daily average UAS (morning and evening values) for 7 days. The maximum UAS7 score is 42. Intent-to-Treat population (all randomized participants). The last observation carried forward value was used if a participant's Week 4 diary data were completely missing. One participant from the omalizumab 600-mg group did not have any post-baseline data and was excluded from the primary analysis.

Secondary: Change in the Weekly Pruritus Score From Baseline to Week 4

End point title	Change in the Weekly Pruritus Score From Baseline to Week 4
-----------------	---

End point description:

The pruritus (itch) score was recorded by participants twice daily (morning and evening) based on the severity of itch over the last 12 hours, using a scale from 0 (none) to 3 (severe). The weekly pruritus score was the sum of average daily pruritus scores over the previous 7 days. The range of the weekly score is 0-21. Intent-to-Treat population (all randomized participants). The last observation carried forward value was used if a participant's Week 4 diary data were completely missing. One participant from the omalizumab 600-mg group did not have any post-baseline data and was excluded from the analysis.

No statistical analyses for this end point

Secondary: Time to Maximum Concentration (Tmax) of Omalizumab

End point title	Time to Maximum Concentration (Tmax) of Omalizumab ^[17]
End point description: Tmax is the time to maximum concentration of omalizumab. Here, number of participants analyzed = participants with available data for this outcome measure.	
End point type	Secondary
End point timeframe: Pre-dose and 2 hours post-dose on Days 0 and 3 of Week 0, Weeks 1, 2, 3, 4, 8, 12, 16 or early termination (up to Week 16)	
Notes: [17] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Placebo group did not receive any omalizumab, therefore Tmax is not applicable.	

End point values	Omalizumab 75 milligrams (mg)	Omalizumab 300 mg	Omalizumab 600 mg	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	22	23	20	
Units: days				
arithmetic mean (standard deviation)	7.37 (± 3.72)	8.01 (± 5.54)	6.24 (± 3.51)	

Statistical analyses

No statistical analyses for this end point

Secondary: Area Under the Concentration-time Curve from Time of Dosing Extrapolated to Infinity (AUC-Inf)

End point title	Area Under the Concentration-time Curve from Time of Dosing Extrapolated to Infinity (AUC-Inf) ^[18]
-----------------	--

End point description:

AUCinf is the area under the concentration-time curve from time of dosing extrapolated to infinity. AUCinf was measured in microgram times day per milliliter ($\mu\text{g}\cdot\text{day}/\text{mL}$). The analysis was performed on Pharmacokinetic-Evaluable Population. Here, number of participants analyzed = participants with available data for this outcome measure.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose and 2 hours post-dose on Days 0 and 3 of Week 0, Weeks 1, 2, 3, 4, 8, 12, 16 or early termination (up to Week 16)

Notes:

[18] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Placebo group did not receive any omalizumab, therefore AUC-Inf is not applicable.

End point values	Omalizumab 75 milligrams (mg)	Omalizumab 300 mg	Omalizumab 600 mg

Number of subjects analysed	18	22	19	
Units: $\mu\text{g}\cdot\text{day}/\text{mL}$				
arithmetic mean (standard deviation)	317 (\pm 99.6)	1260 (\pm 580)	2800 (\pm 1140)	

Statistical analyses

No statistical analyses for this end point

Secondary: Terminal Half-Life ($t_{1/2}$) of Omalizumab

End point title	Terminal Half-Life ($t_{1/2}$) of Omalizumab ^[19]
-----------------	--

End point description:

Terminal Half-Life ($t_{1/2}$) is the time required for the serum concentration of omalizumab to decrease by half in the final stage of its elimination. The analysis was performed on Pharmacokinetic-Evaluable Population. Here, number of participants analyzed = participants with available data for this outcome measure.

End point type	Secondary
----------------	-----------

End point timeframe:

Pre-dose and 2 hours post-dose on Days 0 and 3 of Week 0, Weeks 1, 2, 3, 4, 8, 12, 16 or early termination (up to Week 16)

Notes:

[19] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Placebo group did not receive any omalizumab, therefore $t_{1/2}$ is not applicable.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events were recorded from Day -7 until end of study at 16 weeks

Adverse event reporting additional description:

A Serious AE is any AE that is either: fatal, life threatening, requires or prolongs inpatient hospitalization, results in persistent or significant disability/incapacity, a congenital anomaly/birth defect in a neonate/infant born to a mother exposed to the study treatment or considered a significant medical event by the investigator.

Assessment type	Non-systematic

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants received a single subcutaneous placebo injection on Day 0 of the study. Participants remained on stable doses of their preallocation a CIU H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Reporting group title	Omalizumab 75 mg
-----------------------	------------------

Reporting group description:

Omalizumab (Xolair) was administered subcutaneously on Day 0 of the study. Participants remained on stable doses of their preallocation CIU H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Reporting group title	Omalizumab 300 mg
-----------------------	-------------------

Reporting group description:

Omalizumab (Xolair) was administered subcutaneously on Day 0 of the study. Participants remained on stable doses of their preallocation CIU H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Reporting group title	Omalizumab 600 mg
-----------------------	-------------------

Reporting group description:

Omalizumab (Xolair) was administered subcutaneously on Day 0 of the study. Participants remained on stable doses of their preallocation CIU H1 antihistamine treatment throughout the study, and were provided diphenhydramine as rescue medication for pruritus relief on an as-needed basis.

Serious adverse events	Placebo	Omalizumab 75 mg	Omalizumab 300 mg

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 July 2009	Study Q4577g was amended to consolidate the two CIU protocols for Germany and the United States into one single protocol covering both countries, per recommendation by Genentech's Product Development Regulatory.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
