

Clinical trial results:

A randomised, open label, parallel group Phase II study comparing the efficacy and tolerability of BIBF 1120 versus sunitinib in previously untreated patients with Renal Cell Cancer

Summary

EudraCT number	2009-009516-44
Trial protocol	GB HU

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 July 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 November 2011
Global end of trial reached?	Yes
Global end of trial date	19 June 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objectives of this trial were to compare the efficacy and safety of nintedanib (BIBF 1120) versus sunitinib in patients with advanced renal cell cancer (RCC) and to investigate the effects of nintedanib on the heart rate corrected QT interval (QTcF).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time for any reason given. If a subject continued to take trial medication, close monitoring was adhered to and all adverse events recorded. Rules were implemented in all trials whereby doses would be reduced if required. Thereafter, if further events were reported, the subject would be withdrawn from the trial. Symptomatic treatment of tumour associated symptoms were allowed throughout.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 March 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Hungary: 4
Country: Number of subjects enrolled	Poland: 25
Country: Number of subjects enrolled	Romania: 7
Country: Number of subjects enrolled	Ukraine: 56
Country: Number of subjects enrolled	United Kingdom: 21
Worldwide total number of subjects	113
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	81
From 65 to 84 years	31
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

An open-label, 2:1 randomised, parallel-arm comparison of nintedanib versus sunitinib in patients with advanced renal cell cancer (RCC) who had not received prior systemic therapy.

Pre-assignment

Screening details:

All subjects were screened for eligibility prior to participation in the trial. Subjects attended a specialist site which ensured that they (the subjects) strictly met all inclusion and none of the exclusion criteria. Subjects were not to be allocated to a treatment group if any of the entry criteria were violated.

Period 1

Period 1 title	Randomised
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study and patients were randomised to receive either nintedanib (BIBF 1120), or sunitinib treatment.

The electrocardiogram and pharmacokinetic (PK) samples were identified by patient and study number only.

Arms

Are arms mutually exclusive?	Yes
Arm title	Nintedanib (BIBF 1120)

Arm description:

Participants received orally (swallowed) soft gelatine capsules of nintedanib (BIBF 1120) twice daily (bid) starting with a dose of 200 milligram (mg) bid given continuously in 4-week cycles. Nintedanib was to be swallowed unchewed with about 200 milliliter (mL) of water after food intake with a dosing interval of approximately 12 hours. In case of Adverse Events, the dose was to be reduced to 150 mg bid and 100 mg bid, respectively. The dose was continued daily until withdrawal criteria were fulfilled.

Arm type	Experimental
Investigational medicinal product name	Nintedanib
Investigational medicinal product code	
Other name	BIBF 1120
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

Participants received orally (swallowed) soft gelatine capsules of nintedanib (BIBF 1120) twice daily (bid) starting with a dose of 200 milligram (mg) bid given continuously in 4-week cycles. Nintedanib was to be swallowed unchewed with about 200 milliliter (mL) of water after food intake with a dosing interval of approximately 12 hours. In case of Adverse Events, the dose was to be reduced to 150 mg bid and 100 mg bid, respectively.

Arm title	Sunitinib
------------------	-----------

Arm description:

Participants received orally (swallowed) hard capsule of sunitinib starting with a dose of 50 milligram (mg) once daily (qd). In case of Adverse Events the dose was to be reduced to 37.5 mg once daily and 25 mg once daily, respectively. The daily dosing was performed in 6-week cycles (4 weeks on and 2 weeks off) until withdrawal criteria were fulfilled.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Sunitinib
Investigational medicinal product code	
Other name	Sutent ®
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received orally (swallowed) hard capsule of sunitinib starting with a dose of 50 milligram (mg) once daily (qd). In case of Adverse Events the dose was to be reduced to 37.5 mg once daily and 25 mg once daily, respectively. The daily dosing was performed in 6-week cycles (4 weeks on and 2 weeks off) until withdrawal criteria were fulfilled.

Number of subjects in period 1	Nintedanib (BIBF 1120)	Sunitinib
Started	67	32
Completed	64	32
Not completed	3	0
Not treated	3	-

Period 2

Period 2 title	Treated
Is this the baseline period?	Yes ^[1]
Allocation method	Randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study and patients were randomised to receive either nintedanib (BIBF 1120), or sunitinib treatment.

The electrocardiogram and pharmacokinetic (PK) samples were identified by patient and study number only.

Arms

Are arms mutually exclusive?	Yes
Arm title	Nintedanib (BIBF 1120)

Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Participants received orally (swallowed) hard capsule of sunitinib starting with a dose of 50 milligram (mg) once daily (qd). In case of Adverse Events the dose was to be reduced to 37.5 mg once daily and 25 mg once daily, respectively. The daily dosing was performed in 6-week cycles (4 weeks on and 2 weeks off) until withdrawal criteria were fulfilled.

Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: Period 1 are the randomised subjects, period 2 the treated, baseline characteristics are reported for the treated subjects.

Number of subjects in period 2^[2]	Nintedanib (BIBF 1120)	Sunitinib
Started	64	32
Treated	64	32
Completed	0	0
Not completed	64	32
Patient refusal to continue	4	-
Adverse event, non-fatal	8	4
Progressive disease	47	25
Lost to follow-up	-	1
Other than listed	5	1
Protocol deviation	-	1

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Out of 113 enrolled participants, 96 were treated, which are reported in the baseline characteristics.

Primary: Probability rates of progression-free survival at 9 months

End point title	Probability rates of progression-free survival at 9 months
End point description: Progression free survival rate at 9 months is the estimated probability of being alive and not having progressive disease at 9 months after randomisation. Progression was defined using Response Evaluation Criteria In Solid Tumors Criteria version 1.1 (RECIST v1.1), at least a 20% increase in the sum of the longest diameters of target lesions, taking as reference the smallest sum of the longest diameters recorded since the treatment started together with an absolute increase in the sum of the longest diameters of at least 5 mm, or the appearance of one or more new lesions. Tumour imaging was made by investigators using Computed tomography (CT)/Magnetic Resonance imaging (MRI) every 12 weeks after the first administration of the trial medication. Treated set (TS): All participants who were dispensed study medication and were documented to have taken at least one dose of investigational treatment.	
End point type	Primary
End point timeframe: At 9 months after randomisation.

Method	Normal approximation test

Notes:

[3] - P-value for comparison of Kaplan–Meier estimates at 9 months using normal approximation test (two-sided).

Primary: Time-matched change from baseline to Day 15 in QTcF (QT interval corrected by the Fridericia formula) at 0 hour (h), at 1 h, at 2 h, at 3 h, at 4 h, at 5 h, at 6 h, at 7 h, at 10 h and at 12 h after dosing of nintedanib (BIBF 1120)

End point title	Time-matched change from baseline to Day 15 in QTcF (QT interval corrected by the Fridericia formula) at 0 hour (h), at 1 h, at 2 h, at 3 h, at 4 h, at 5 h, at 6 h, at 7 h, at 10 h and at 12 h after dosing of nintedanib (BIBF 1120) ^{[4][5]}
-----------------	---

End point description:

QTcF interval is the QT interval (electrocardiogram (ECG) interval from the beginning of the QRS complex to the end of the T wave) corrected for the effects of heart rate by the Fridericia formula. Baseline QTcF measurement at time t was defined as the QTcF measurement collected 1 day prior to the day of the first administration of nintedanib at time t. Time-matched change from baseline to Day 15 in QTcF at time t was defined as the QTcF measurement following administration of nintedanib on Day 15 obtained at time t minus baseline QTcF measurement at time t. 0 h is 5 min prior to dosing at Day 15. Time-matched change from baseline to Day 15 in QTcF was modelled using a linear mixed-effects model for repeated measures which included 'time' as repeated measures and the time-matched baseline value as a covariate. Adjusted means with corresponding 2-sided 90% confidence intervals are reported. FAS-ECG.

End point type	Primary
----------------	---------

End point timeframe:

At 5 minutes (min) before the first dose and at 1 hour (h), at 2 h, at 3 h, at 4 h, at 5 h, at 6 h, at 7 h, at 10 h and at 12 h after the first dose of nintedanib on Day 15. Baseline (Day -1) values were taken at exactly the same time points as on Day 15.

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: End point was analyzed only descriptively

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was defined and analyzed only for the nintedanib (BIBF 1120) arm.

Statistical analyses

No statistical analyses for this end point

Secondary: Time-matched change from baseline in QT interval at the time of each patient's maximum plasma concentration of nintedanib (BIBF 1120), calculated separately for Days 1 and 15 of treatment cycle 1

End point title	Time-matched change from baseline in QT interval at the time of each patient's maximum plasma concentration of nintedanib (BIBF 1120), calculated separately for Days 1 and 15 of treatment cycle 1 ^[34]
-----------------	---

End point description:

QT interval is the (electrocardiogram (ECG) interval from the beginning of the QRS complex to the end of the T wave. Baseline QT measurement at time t was defined as the QT measurement collected 1 day prior to the day of the first administration of nintedanib at time t. Time-matched change from baseline to Day 1 (Day 15) in QT at time t was defined as the QT measurement following administration of nintedanib on Day 1 (Day 15) obtained at time t minus baseline QT measurement at time t. For each participant 'Time-matched change from baseline to Day 1 (Day 15) in QT' at the time of the participant's maximum nintedanib plasma concentration was obtained and the mean across all participants calculated. Corresponding two-sided 90% confidence intervals based on the t-distribution are reported.

Time frame: Baseline (Day -1) values were taken at exactly the same time points as on Day 1 and on Day 15.

FAS-ECG.

End point type	Secondary
----------------	-----------

End point timeframe:

At 5 minutes (min) before the first dose on Day 15 and at 1 hour (h), at 2 h, at 3 h, at 4 h, at 5 h, at 6 h, at 7 h, at 10 h and at 12 h after the first dose of nintedanib on Day 1 and on Day 15 of the first treatment cycle. Continues in the description.

Notes:

[34] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was defined and analyzed only for the nintedanib (BIBF 1120) arm.

Secondary: Frequency of patients with maximum time-matched QTcF interval change from baseline categorized by magnitude of change, calculated separately for Days 1 and 15 of treatment cycle 1

End point title	Frequency of patients with maximum time-matched QTcF interval change from baseline categorized by magnitude of change, calculated separately for Days 1 and 15 of treatment cycle 1 ^[54]
-----------------	---

End point description:

QTcF interval is the QT interval (electrocardiogram (ECG) interval from the beginning of the QRS complex to the end of the T wave) corrected for the effects of heart rate (HR) by the Fridericia formula. Number of patients with maximum time-matched change from baseline in the QTcF interval observed at each point in time, i.e., 9 time points on Day 1 and 10 timepoints on Day 15 is reported. 3 categories of individual QTcF increases from baseline to maximum value were defined:

<= 30 milliseconds (ms)

> 30 to 60 milliseconds (ms)

> 60 milliseconds (ms)

Changes more than 60 ms in the QTcF interval represent notable changes.

Time frame: Baseline (Day -1) values were taken at exactly the same time points as on Day 15. FAS-ECG.

Statistical analyses

No statistical analyses for this end point

Secondary: Frequency of patients with maximum time-matched QT interval (electrocardiogram (ECG) interval from the beginning of the QRS complex to the end of the T wave) change from baseline categorized by magnitude of change, Days 1 and 15

End point title	Frequency of patients with maximum time-matched QT interval (electrocardiogram (ECG) interval from the beginning of the QRS complex to the end of the T wave) change from baseline categorized by magnitude of change, Days 1 and 15 ^[56]
-----------------	--

End point description:

Number of patients with maximum time-matched change from baseline in the QT interval observed at each point in time, i.e., 9 time points on Day 1 and 10 timepoints on Day 15 is reported. 3 categories of individual QTcF increases from baseline to maximum value were defined:

<= 30 milliseconds (ms)

> 30 to 60 milliseconds (ms)

> 60 milliseconds (ms)

Changes more than 60 ms in the QT interval represent notable changes.

Time frame: Baseline (Day -1) values were taken at exactly the same time points as on Day 15.

FAS-ECG.

End point type	Secondary
----------------	-----------

End point timeframe:

At 5 minutes (min) before the first dose on Day 15 and at 1 hour (h), at 2 h, at 3 h, at 4 h, at 5 h, at 6 h, at 7 h, at 10 h and at 12 h after the first dose of nintedanib on Day 1 and on Day 15 of the first treatment cycle. Continues in the description.

Notes:

[56] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was defined and analyzed only for the nintedanib (BIBF 1120) arm.

End point values	Nintedanib (BIBF 1120)

Notes:

[74] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was defined and analyzed only for the nintedanib (BIBF 1120) arm.

End point values	Nintedanib (BIBF 1120)			
Subject group type	Reporting group			
Number of subjects analysed	64 ^[75]			
Units: milliseconds (ms)				
arithmetic mean (standard deviation)				
Absolute value on Day -1 at -5 minutes (min)	92.5 (± 11.8)			
Absolute value on Day -1 at 1 hour (h)	93.8 (± 11.1)			
Absolute value on Day -1 at 2 h	93.3 (± 10.6)			
Absolute value on Day -1 at 3 h	93.6 (± 10.9)			

Absolute value on Day -1 at 4 h	92.7 (± 9.9)			
Absolute value on Day -1 at 5 h	92.7 (± 11.0)			
Absolute value on Day -1 at 6 h	92.7 (± 10.3)			
Absolute value on Day -1 at 7 h	93.1 (± 10.6)			
Absolute value on Day -1 at 10 h	92.8 (± 11.8)			
Absolute value on Day -1 at 12 h	92.6 (± 10.4)			
Absolute value on Day 15 at -5 min	93.3 (± 11.0)			
Absolute value on Day 15 at 1 h	93.9 (± 10.3)			
Absolute value on Day 15 at 2 h	93.0 (± 11.5)			
Absolute value on Day 15 at 3 h	92.9 (± 11.1)			
Absolute value on Day 15 at 4 h	92.6 (± 11.2)			
Absolute value on Day 15 at 5 h	93.6 (± 10.9)			
Absolute value on Day 15 at 6 h	93.1 (± 11.1)			
Absolute value on Day 15 at 7 h	93.1 (± 11.3)			
Absolute value on Day 15 at 10 h	92.8 (± 10.7)			
Absolute value on Day 15 at 12 h	93.7 (± 11.5)			
Time-matched change from Day -1 to Day15 at -5 min	0.8 (± 5.4)			
Time-matched change from Day -1 to Day 15 at 1 h	0.0 (± 5.1)			
Time-matched change from Day -1 to Day 15 at 2 h	-0.3 (± 5.3)			
Time-matched change from Day -1 to Day 15 at 3 h	-0.8 (± 5.7)			
Time-matched change from Day -1 to Day 15 at 4 h	-0.6 (± 5.4)			
Time-matched change from Day -1 to Day 15 at 5h	0.5 (± 7.3)			
Time-matched change from Day -1 to Day 15 at 6 h	-0.1 (± 5.3)			
Time-matched change from Day -1 to Day 15 at 7 h	-0.4 (± 5.3)			
Time-matched change from Day -1 to Day 15 at 10 h	0.1 (± 5.1)			
Time-matched change from Day -1 to Day 15 at 12 h	1.0 (± 4.7)

Statistical analyses

No statistical analyses for this end point

Secondary: Frequency of patients by clinical electrocardiogram (ECG) measurement interpretation, calculated separately for Days 1 and 15 of treatment cycle 1

End point title	Frequency of patients by clinical electrocardiogram (ECG) measurement interpretation, calculated separately for Days 1 and 15 of treatment cycle 1 ^[76]
-----------------	--

End point description:

Based on the interpretation of the electrocardiogram (ECG) patients were classified in 3 categories:

- Normal (a normal ECG reading would be a reading that includes the following normal findings: 1) normal general features; 2) no arrhythmia; 3) no conduction delays;

4) T-wave morphology of normal; and 5) normal U-wave morphology) on Day 1 or on Day 15)

- Not normal and not normal at baseline (an abnormal ECG reading would be a reading that includes one or more of the following abnormal findings: 1) abnormal general features; 2) arrhythmia; 3) conduction delays;

4) T-wave morphology of flat, inverted or biphasic; and 5) abnormal U-wave morphology) on Day 1 or

on Day 15)

- Not normal and new onset of finding

Time frame: Baseline (Day -1) values were taken at exactly the same time points as on Day 15. FAS-ECG.

End point type	Secondary
----------------	-----------

End point timeframe:

At 5 minutes (min) before the first dose on Day 15 and at 1 hour (h), at 2 h, at 3 h, at 4 h, at 5 h, at 6 h, at 7 h, at 10 h and at 12 h after the first dose of nintedanib on Day 1 and on Day 15 of first treatment cycle. Continues in the description.

Notes:

[76] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint was defined and analyzed only for the nintedanib (BIBF 1120) arm.

End point values	Nintedanib (BIBF 1120)			
Subject group type	Reporting group			
Number of subjects analysed	64 ^[77]			
Units: Participants				
Day 1 Normal	39			
Day 15 Normal	37			
Day 1 Not normal and not normal at baseline	24			
Day 15 Not normal and not normal at baseline	25			
Day 1 Not normal and new onset of finding	1			
Day 15 Not normal and new onset of finding	1

Reporting groups

Reporting group title	Nintedanib (BIBF 1120)
-----------------------	------------------------

Reporting group description:

Participants received orally (swallowed) soft gelatine capsules of nintedanib (BIBF 1120) twice daily (bid) starting with a dose of 200 milligram (mg) bid given continuously in 4-week cycles. Nintedanib was to be swallowed unchewed with about 200 milliliter (mL) of water after food intake with a dosing interval of approximately 12 hours. In case of Adverse Events, the dose was to be reduced to 150 mg bid and 100 mg bid, respectively. The dose was continued daily until withdrawal criteria were fulfilled.

Reporting group title	Sunitinib
-----------------------	-----------

Reporting group description:

Participants received orally (swallowed) hard capsule of sunitinib starting with a dose of 50 milligram (mg) once daily (qd). In case of Adverse Events the dose was to be reduced to 37.5 mg once daily and 25 mg once daily, respectively. The daily dosing was performed in 6-week cycles (4 weeks on and 2 weeks off) until withdrawal criteria were fulfilled.

occurrences (all)	4	0	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 March 2010	Global amendment No. 1: Clarified some discrepancies within the trial protocol, namely to adjust the flow charts to the corresponding written paragraphs. Likewise, the time schedule for PK sampling given in Appendix 10 of the trial protocol was corrected to accurately reflect the written parts of the protocol. Moreover, Global Amendment No. 1 stated that a minimisation approach was unnecessary as a stratified randomisation would be sufficient to ensure a 2:1 ratio of the treatment arms overall and within each stratum.
11 July 2017	Global amendment No. 2: Clarified that the follow-up for progressive disease was now no longer required.
11 July 2019	Global amendment No. 3: Clarified the future handling for clinical laboratory assessments, vital signs, physical findings, and other observations related to safety. It also introduced the possibility to remove patients from the trial after completion of the primary efficacy analysis, given that the patient consented and given that the patient had access to the study medication through marketed product.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
