

Clinical trial results:

Randomized, Parallel, Double-Blind, Placebo-Controlled Trial to Evaluate the Efficacy and Safety of SBI-087 in Seropositive Subjects With Active Rheumatoid Arthritis on a Stable Background of Methotrexate

Summary

EudraCT number	2009-010516-15
Trial protocol	HU ES PL GR
Global end of trial date	25 July 2013

Results information

Result version number	v1 (current)
This version publication date	23 May 2016
First version publication date	05 August 2015

Trial information

Trial identification

Sponsor protocol code	3227K1-2000

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 July 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	25 July 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate clinical efficacy and safety of 4 SBI-087 subcutaneous (SC) dosing regimens versus placebo in seropositive subjects with active rheumatoid arthritis (RA) on a stable background of Methotrexate (MTX).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 December 2009
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy, Safety
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects**Subjects enrolled per country**

Country: Number of subjects enrolled	Hungary: 11
Country: Number of subjects enrolled	Argentina: 7
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	Chile: 6
Country: Number of subjects enrolled	Japan: 36
Country: Number of subjects enrolled	Mexico: 2
Country: Number of subjects enrolled	Serbia: 37
Country: Number of subjects enrolled	United States: 64
Country: Number of subjects enrolled	Poland: 35
Country: Number of subjects enrolled	Spain: 9
Worldwide total number of subjects	209
EEA total number of subjects	55

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	169
From 65 to 84 years	40
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 210 subjects in 10 countries were enrolled in this study. Out of these 210 subjects, 209 subjects received the study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	SBI-087/ Placebo/ Placebo

Arm description:

Subjects with active RA and on a on a stable background of MTX, received SBI-087 on Day 1 and placebo matched to SBI-087 on Day 15 and 84 during the initial phase of study. Subjects were followed up after day 168 of initial phase up to 2 years.

Arm type	Experimental
Investigational medicinal product name	SBI-087
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received 200 milligram (mg) SBI-087 SC injection on Day 1.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received placebo matched to SBI-087 on Day 15 and 84.

Arm title	SBI-087/ SBI-087/ Placebo
------------------	---------------------------

Arm description:

Subjects with active RA on a stable background of MTX, received SBI-087 on Day 1, 15 and placebo matched to SBI-087 on Day 84. Subjects were followed up after day 168 of initial phase up to 2 years.

Arm type	Experimental
Investigational medicinal product name	SBI-087
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received 200 mg SBI-087 SC injection on Day 1 and Day 15.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use
Dosage and administration details:	
Subjects received placebo matched to SBI-087 on Day 84.	
Arm title	SBI-087/ Placebo/ SBI-087

Arm description:

Subjects with active RA on a stable background of MTX, received SBI-087 200 mg on Day 1, 84 and placebo matched to SBI-087 on Day 15. Subjects were followed up after day 168 of initial phase up to 2 years.

Arm type	Experimental
Investigational medicinal product name	SBI-087
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received 200 mg SBI-087 SC injection on Day 1 and Day 84.

Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received placebo matched to SBI-087 on Day 15.

Arm title	SBI-087/ SBI-087/ SBI-087
------------------	---------------------------

Arm description:

Subjects with active RA on a stable background of MTX, received SBI-087 200 mg on Day 1, 15 and 84. Subjects were followed up after day 168 of initial phase up to 2 years.

Arm type	Experimental
Investigational medicinal product name	SBI-087
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received 200 mg SBI-087 SC injection on Day 1, 15 and 84.

Arm title	Placebo/ Placebo/ Placebo
------------------	---------------------------

Arm description:

Subjects with active RA on a stable background of MTX, received placebo matched to SBI-087 on Day 1, 15 and 84. Subjects were followed up after day 168 of initial phase up to 2 years.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Subjects received placebo matched to SBI-087 SC injection on Day 1, 15 and 84.

Primary: Percentage of Subjects Achieving American College of Rheumatology 20% (ACR20) Response at Week 16

End point title	Percentage of Subjects Achieving American College of Rheumatology 20% (ACR20) Response at Week 16 ^[1]
End point description: ACR20 response: greater than or equal to (\geq) 20 percent (%) improvement in tender joints count with 28 joints (TJC28); \geq 20% improvement in swollen joints count with 28 joints (SJC28); and \geq 20% improvement in at least 3 of 5 remaining ACR core measures: subject assessment of pain; subject global assessment of disease activity; physician global assessment of disease activity; self-assessed disability (disability index of the Health Assessment Questionnaire [HAQ]); and C-Reactive Protein (CRP). Modified intent-to-treat (mITT) population included all randomized subjects who received any portion of investigational product. Missing values were imputed using the last observation carried forward (LOCF).	
End point type	Primary
End point timeframe: Week 16	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis has been provided separately as an attachment.

Statistical analyses

No statistical analyses for this end point

Secondary: Change from Baseline in Swollen Joints Count (SJC) at Week 2, 4,8, 12, 16,20, 24

End point title	Change from Baseline in Swollen Joints Count (SJC) at Week 2, 4,8, 12, 16,20, 24
-----------------	--

End point description:

Number of swollen joints was determined by examination of 28 joints and identifying when swelling was present. The number of swollen joints was recorded on the joint assessment form at each visit, no swelling = 0, swelling =1. A negative value in change from baseline indicates an improvement. Least square mean and standard error are estimated from an analysis of covariance (ANCOVA) model with treatment, prior anti-tumor necrosis factor (TNF) failure and geographic region as covariates. mITT population included all randomized subjects who received any portion of investigational product. Missing values were imputed using LOCF.

Secondary: Percentage of Subjects With Hybrid Measure of American College of Rheumatology (ACR)

End point title	Percentage of Subjects With Hybrid Measure of American College of Rheumatology (ACR)
-----------------	--

End point description:

Average percentage improvement in ACR core set measures of subjects were calculated. If a core set measure worsened by 100%, that percentage improvement was limited to --100%. This measure was used to determine whether subject had achieved: ACR20, 50, or 70. ACR20, 50 or 70 responses: ≥ 20 or 50 or 70% (respective) improvement in tender joint count or in swollen joint count; and ≥ 20 or 50 or 70% (respective) improvement in at least 3 of 5 remaining ACR core measures: subject assessment of pain; subject global assessment of disease activity; physician global assessment of disease activity; self-assessed disability (disability index of the HAQ); and CRP. A table was used to obtain the Hybrid ACR response measure, where, ACR status of the subject (left column) and the mean percentage improvement in core set items was taken, the Hybrid ACR score is where they intersect in the table.

End point title	Change From Baseline in C--Reactive Protein (CRP) at Week 2, 8, 12, 16, 24
-----------------	--

End point description:

The test for CRP is a laboratory measurement for evaluation of an acute phase reactant of inflammation through the use of an ultrasensitive assay. Normal range of CRP is 0 milligram per liter (mg/L) to 100 mg/L. A decrease in the level of CRP indicates reduction in inflammation and therefore improvement. Least square mean and standard error are estimated from an ANCOVA model with treatment, prior anti-TNF failure and geographic region as covariates. mITT population included all randomized subjects who received any portion of investigational product. Missing values were imputed using LOCF.

Secondary: Change From Baseline in Disease Activity Score Based on 28 Joints Count, General Health Score and C--Reactive Protein (DAS28--4 [CRP]) at Week 2, 8, 12, 16, 24

End point title	Change From Baseline in Disease Activity Score Based on 28 Joints Count, General Health Score and C--Reactive Protein (DAS28--4 [CRP]) at Week 2, 8, 12, 16, 24
-----------------	---

End point description:

DAS28--4 (CRP) was calculated from SJC and TJC using 28 joints count, CRP (mg/dL) and general health score using 100 mm VAS scale. Total score range: 0-9.4, higher score=more disease activity. DAS28--4 (CRP) less than or equal to (\leq) 3.2 implied low disease activity and greater than ($>$) 3.2 to 5.1 implied moderate to high disease activity, and DAS28--4 (CRP) less than ($<$) 2.6 = remission. Least square mean and standard error are estimated from an ANCOVA model with treatment, prior anti-TNF failure and geographic region as covariates. mITT population included all randomized subjects who received any portion of investigational product. Missing values were imputed using LOCF.

Secondary: Percentage of Subjects With European League Against Rheumatism (EULAR) Response Based on DAS28

End point title	Percentage of Subjects With European League Against Rheumatism (EULAR) Response Based on DAS28
-----------------	--

End point description:

The Disease Activity Score Based on 28- joints Count based (DAS28 -based) EULAR response criteria were used to measure individual response as none, good, and moderate, depending on the extent of change from baseline and the level of disease activity reached. Good responders: change from baseline >1.2 with DAS28 ≤ 3.2; moderate responders: change from baseline >1.2 with DAS28 >3.2 or change from baseline >0.6 to ≤1.2 with DAS28 >5.1; non-responders: change from baseline ≤ 0.6 or change from baseline >0.6 and ≤1.2 with DAS28 >5.1.

Secondary: Change From Baseline in Health Assessment Questionnaire Disability Index (HAQ--DI) at Week 2, 4, 8, 12, 16, 20, 24

End point title	Change From Baseline in Health Assessment Questionnaire Disability Index (HAQ--DI) at Week 2, 4, 8, 12, 16, 20, 24
-----------------	--

End point description:

HAQ--DI: subject-reported assessment of ability to perform tasks in 8 functional categories of daily living activities: dress/groom; arise; eat; walk; reach; grip; hygiene; and common activities over past week. Each item scored on 4--point scale from 0 to 3: 0=no difficulty; 1=some difficulty; 2=much difficulty; 3=unable to do. Overall score was computed as the sum of domain scores and divided by the number of domains answered. Total possible score range 0--3, 0=least functional difficulty and 3=extreme functional difficulty. Change = observation overall score minus baseline overall score. Least square mean and standard error are estimated from an ANCOVA model with treatment, prior anti-TNF failure and geographic region as covariates. mITT population included all randomized subjects who received any portion of investigational product. Missing values were imputed using LOCF.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 999 days after last dose of study drug

Adverse event reporting additional description:

The same event may appear as both an AE and a SAE. However, what is presented are distinct events. An event may be categorized as serious in one subject and as nonserious in another subject, or one subject may have experienced both a serious and nonserious event during the study.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 October 2009	Clarification of stable doses of methotrexate use throughout the course of the study was added. Documentation of tuberculosis test results were to be available 4 weeks prior to screening visit not baseline visit. Conclusion of Participation eCRF for subjects entering the Follow-up Phase was completed. The 2 urine tests were added to obtain a more sensitive measure of renal function. Text modified to include urine samples for future testing. Blood and urine samples were collected and stored for future safety testing if necessary.
23 February 2010	CRP inclusion criterion was modified to reflect changes in the normal range at the central lab over a period of time. As the normal value is ≤ 5 mg/L this new CRP represents a value 140% above the upper limit of normal (ULN). Added history of tuberculosis in exclusion criteria 5 to ensure subjects with higher risk (ie, history of TB) were not enrolled. Subjects with very low lymphocyte counts at screening were to be excluded from the study. Additional information was added to the protocol to help investigators determine the severity of injection site reactions that may occur in the study. Overdose language was clarified to ensure that dosing errors do not occur.
02 December 2010	The timing of vital signs was changed to correspond to the change in amount of time that subjects are required to stay at the site after dosing on days 1, 15, and 84. Chest x-ray was to be performed within 24 weeks of the screening visit documenting the absence of any significant findings was available, the screening X-ray was not required. On-site post-dose safety monitoring period was reduced as subjects were required to stay at the site for at least 6 hours after dosing on days 1, 15 and 84.
12 November 2012	Two new subject discontinuation criteria were added: subjects with B-cell levels that achieved a new stable baseline or subjects who completed 2 years of follow-up after the last dose of study drug administration. The recommended list of repeated laboratory tests was updated to include prothrombin time. More inclusive definition of AEs and of SAEs were added.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Certain secondary outcome measures (hybrid measure of ACR, ACR--N, ACR--n curve, EULAR response) were not analyzed due to the Sponsor's decision to terminate development of the compound.

Notes:
