

**Clinical trial results:**

A randomised, double-blind, parallel group study to assess the efficacy and safety of 52 weeks of once daily treatment of orally inhaled tiotropium + olodaterol fixed dose combination (2.5 g / 5 g; 5 g / 5 g) (delivered by the Respimat® Inhaler) compared with the individual components (2.5 g and 5 g tiotropium, 5 g olodaterol) (delivered by the Respimat® Inhaler) in patients with Chronic Obstructive Pulmonary Disease (COPD).

Due to a system error, the data reported in v1 is not correct and has been removed from public view.

Notes:

General information about the trial

Main objective of the trial:

The overall objective of this study is to assess the efficacy and safety of 52 weeks once daily treatment with orally inhaled tiotropium + olodaterol fixed dose combination ((2.5 µg / 5 µg; 5 µg / 5 µg) (delivered by the Respimat® Inhaler) compared with the individual components (2.5 and 5 µg tiotropium, 5 µg olodaterol) (delivered by the Respimat® Inhaler) in patients with Chronic Obstructive Pulmonary Disease (COPD).

Protection of trial subjects:

Only subjects that met all the study inclusion and none of the exclusion criteria were to be entered in the study. All subjects were free to withdraw from the clinical trial at any time without the need to provide a reason. Close monitoring of all subjects was adhered to throughout the trial conduct. Rescue medication was allowed for all patients as required.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 September 2011
Long term follow-up planned	No

85 years and over	15

Subject disposition

Recruitment

Recruitment details:

A "Missing" category is unavailable for the age group breakdown of enrolled patients. Hence, 8 subjects with a missing data for age group have been added to age-category "18-64 years".

Pre-assignment

Screening details:

All subjects were screened for eligibility to participate in the trial. Subjects attended one specialist site which would then ensure that they (the subjects) met all inclusion/exclusion criteria. Subjects were not to be randomised to trial treatment if any one of the specific entry criteria were violated.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Olodaterol (Olo) 5 µg

Arm description:

Oral inhalation of Olodaterol 5 µg (2.5 µg per actuation), 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Arm type	Active comparator
Investigational medicinal product name	Olodaterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

5 µg Once daily with orally inhalation

Arm title	Tiotropium (Tio) 2.5 µg
------------------	-------------------------

Arm description:

Oral inhalation of Tiotropium 2.5 µg (1.25 µg per actuation), 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Arm type	Active comparator
Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

2.5 µg once daily with orally inhalation

Arm title	Tiotropium (Tio) 5 µg
------------------	-----------------------

Arm description:

Oral inhalation of Tiotropium 5 µg (2.5 µg per actuation), 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use
Dosage and administration details: 5 µg once daily with orally inhalation	
Arm title	Tio + Olo (T+O) 2.5 /5 µg

Arm description:

Oral inhalation of fixed dose combination (FDC) of Tiotropium 2.5 µg and Olodaterol 5 µg (Tiotropium: 1.25 µg per actuation and Olodaterol: 2.5 µg per actuation), 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Arm type	Experimental
Investigational medicinal product name	Tiotropium
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

2.5 µg once daily with orally inhalation

Investigational medicinal product name	Olodaterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

5 µg once daily with orally inhalation

Arm title	Tio + Olo (T + O) 5/5 µg
------------------	--------------------------

Arm description:

Oral inhalation of FDC of Tiotropium 5 µg and Olodaterol 5 µg (Tiotropium and Olodaterol: 2.5 µg per actuation), 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Arm type	Experimental
Investigational medicinal product name	Olodaterol
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Inhalation solution
Routes of administration	Inhalation use

Dosage and administration details:

5 µg once daily with orally inhalation

Investigational medicinal product name	Tiotropium

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: Baseline characteristics are based on the patients who were randomised after successfully completing the screening period and received at least one dose of the trial medication.

End point title	Trough FEV1 response on Day 170
End point description:	
Trough FEV1 defined as the FEV1 value at the end of the dosing interval (24h)&calculated as mean of 2 FEV1 measurements performed at 23h &at 23h 50 min after inhalation of study medication at clinic visit on the previous day.Trough FEV1 response was defined as trough FEV1 minus baseline FEV1.Baseline was defined as mean of 2 pre-dose measurements performed 1h&at 10 min prior to administration of first dose at visit2(day 1).The adjusted means (SE) obtained by fitting mixed effect model repeated measures(MMRM) including fixed effects of treatment,planned test day,treatment-by-test day interaction,baseline&baseline-by-test day interaction,patient as random effect,&spatial power covariance structure for within-patient errors&Kenward- Roger approximation for denominator degrees of freedom.Since it is possible for patient to meet the data criterion for only a subset of the primary endpoints,it is possible that the number of patients used in the FAS analysis for different endpoint will

Secondary: FEV1 AUC(0-3h) response on Day 1, Day 85, and Day 365

End point title	FEV1 AUC(0-3h) response on Day 1, Day 85, and Day 365
-----------------	---

End point description:

FEV1 AUC(0-3h) was calculated as the area under the FEV1- time curve from 0 to 3 h post-dose using the trapezoidal rule, divided by the duration (3 h) to report in litres. FEV1 AUC(0-3h) response was defined as FEV1 AUC(0-3h) minus baseline FEV1. Baseline was defined as the mean of the 2 pre-dose measurements performed 1 h & at 10 min prior to administration of the first dose of randomised treatment at Day 1. The adjusted means (SE) were obtained by fitting an Mixed effect model repeated measures (MMRM) including fixed effects of treatment, planned test day, treatment-by-test day interaction, baseline & baseline-by-test day interaction, patient as random effect, & spatial power covariance structure for within-patient errors and Kenward-Roger approximation for denominator degrees of freedom. Since it is possible for the patient to meet the data criterion for only a subset of the primary endpoints, it is possible that the number of patients used in the FAS analysis for different endpoint vary.

End point type	Secondary
----------------	-----------

End point timeframe:

1 hour (h) and at 10 minutes (min) prior to dose on the first day of randomized treatment and on Days 85 and 365 and 5 min, 15 min, 30 min, 1 h, 2 h, 3 h post-dose on the first day of randomized treatment and on Days 85 and 365.

Secondary: Trough FEV1 response on Day 15, Day 43, Day 85, Day 169, and Day 365

End point title	Trough FEV1 response on Day 15, Day 43, Day 85, Day 169, and Day 365
-----------------	--

End point description:

Trough FEV1 defined as the FEV1 value at the end of the dosing interval (24 hours), calculated as mean of the pre-dose measurements. Trough FEV1 response was defined as trough FEV1 minus baseline FEV1. Baseline was defined as mean of 2 pre-dose measurements performed 1h&at 10 min prior to administration of the first dose of randomised treatment at Day1. The adjusted means (SE) were obtained by MMRM model including fixed effects of treatment, planned test day, treatment-by-test day interaction, baseline&baseline-by-test day interaction, patient as random effect, & spatial power covariance structure for within-patient errors & Kenward-Roger approximation for denominator degrees of freedom. Since it is possible for the patient to meet the data criterion for only a subset of the primary endpoints, it is possible that the number of patients used in the FAS analysis for different endpoint vary.

End point type	Secondary
----------------	-----------

End point timeframe:

1 hour (h) and at 10 minutes (min) prior to dose on the first day of randomized treatment and on Days 85, 169 and 365 and 10 minutes (min) prior to randomized treatment on days 15 and 43.

Secondary: Trough FVC response on Day 15, Day 43, Day 85, Day 170, and Day 365

End point title	Trough FVC response on Day 15, Day 43, Day 85, Day 170, and Day 365
-----------------	---

End point description:

Trough FVC defined as the FVC value at the end of the dosing interval (24 hours), calculated as mean of the pre-dose measurements. Trough FVC response defined as trough FVC minus baseline FVC. Baseline was defined as mean of 2 pre-dose measurements performed 1h&at 10min prior to administration of first dose at visit 2(day 1). The adjusted means (SE) were obtained by fitting MMRM including fixed effects of treatment, planned test day, treatment-by-test day interaction, baseline and baseline-by-test day interaction, patient as random effect, &spatial power covariance structure for within-patient errors &Kenward-Roger approximation for denominator degrees of freedom. Since it is possible for the patient to meet the data criterion for only a subset of the primary endpoints, it is possible that the number of patients used in the FAS analysis for different endpoints will vary.

End point type	Secondary
----------------	-----------

End point timeframe:

1 h and at 10 min prior to dose on the first day of randomized treatment (baseline), day 85, day 365, at 10 min pre-dose on day 15 and 43 and at 23 h and at 23 h 50 min after inhalation of study medication on Day 170.

Tiotropium (Tio) 2.5 µg minus Olodaterol (Olo) 5 µg. The adjusted mean (SE) are obtained from fitting a mixed effect model repeated measures (MMRM) including fixed effects of treatment, planned test day, treatment by test day interaction, baseline, and baseline by test day interaction; patient as a random effect; spatial power covariance structure for within-patient errors and Kenward-Roger approximation of denominator degrees of freedom.

Comparison groups	Tiotropium (Tio) 2.5 µg v Olodaterol (Olo) 5 µg
Number of subjects included in analysis	1038
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0002
Method	Mixed models analysis
Parameter estimate	Adjusted mean difference
Point estimate	0.091
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.043
upper limit	0.139
Variability estimate	Standard error of the mean
Dispersion value	0.025

Statistical analysis title	Tio 5 vs Tio 2.5 on Day 170
-----------------------------------	-----------------------------

Statistical analysis description:

Tiotropium (Tio) 5 µg minus Tiotropium (Tio) 2.5 µg. The adjusted mean (SE) are obtained from fitting a mixed effect model repeated measures (MMRM) including fixed effects of treatment, planned test day, treatment by test day interaction, baseline, and baseline by test day interaction; patient as a random effect; spatial power covariance structure for within-patient errors and Kenward-Roger approximation of denominator degrees of freedom.

Comparison groups	Tiotropium (Tio) 5 µg v Tiotropium (Tio) 2.5 µg

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse events with an onset after the first dose of study medication up to a period of 21 days after the last dose of study medication were assigned to the treatment period for evaluation (Up to 447 days)

Assessment type	Systematic

Reporting groups

Reporting group title	Olodaterol (5 µg)
-----------------------	-------------------

Reporting group description:

Oral inhalation of Olodaterol 5 µg (2.5 µg per actuation) , 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Reporting group title	Tiotropium (2.5 µg)
-----------------------	---------------------

Reporting group description:

Oral inhalation of Tiotropium 2.5 µg (1.25 µg per actuation) , 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Reporting group title	Tiotropium (5 µg)
-----------------------	-------------------

Reporting group description:

Oral inhalation of Tiotropium 5 µg (2.5 µg per actuation) , 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Reporting group title	Tio+Olo FDC (2.5/5 µg)
-----------------------	------------------------

Reporting group description:

Oral inhalation of fixed dose combination (FDC) of Tiotropium 2.5 µg and Olodaterol 5 µg (Tiotropium: 1.25 µg per actuation and Olodaterol: 2.5 µg per actuation) , 2 puffs from the RESPIMAT inhaler, once daily, in the morning.

Reporting group title	Tio+Olo FDC (5/5 µg)
-----------------------	----------------------

Reporting group description:

Oral inhalation of FDC of Tiotropium 5 µg and Olodaterol 5 µg (Tiotropium and Olodaterol: 2.5 µg per actuation) , 2 puffs from the RESPIMAT inhaler, once daily, in the morning

Serious adverse events	Olodaterol (5 µg)	Tiotropium (2.5 µg)	Tiotropium (5 µg)
Total subjects affected by serious adverse events

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 October 2011	<p>Significant changes to the trial protocol introduced by this revision were a change in timing of Visit 7* and the addition of trough PFT measurements to this visit to ensure FEV1 AUC0-3h and trough FEV1 at Visit 7 (primary efficacy endpoints after 24 weeks of treatment) both came from the same dosing interval. Furthermore, instructions were added to report any related SAEs that occurred after the defined observational period.</p> <p>Note: The last amendment to the protocol dated 28-Oct-2013 has been made after the global end of trial date (19-Sep-2013). In this administrative revision, assessment days and time points were added to the lists of primary, secondary and further endpoints. Several endpoints were split into secondary and further endpoints and 10 endpoints were moved from secondary to further endpoints. The list of further endpoints concerning COPD exacerbations was extended, with any, moderate/severe, and severe COPD exacerbations to be analysed as separate endpoints. Each endpoint related to COPD exacerbations was to be analysed for the entire population and for the subset of patients with a history of exacerbation. FPI was to be regarded as a further endpoint. The TDI component scores on Day 169 originally were inadvertently left out of the list of further endpoints. As with other TDI data, these endpoints were to be examined for data from 1237.5+1237.6 combined. A definition of patients to be considered having a history of exacerbation was added. The 1-sided superiority hypothesis testing was changed to 2-sided hypothesis testing, and the corresponding 1-sided type I error rate of 0.025 was changed to 2-sided type I error rate of 0.05. Since tiotropium 5µg is a marketed product in several countries, a comparison of T+O 2.5/5 µg versus Tio 5 µg was added to the hierarchical testing sequences.</p>
29 August 2012	<p>Significant changes to the trial protocol introduced by this revision were the extension of procedures to be performed for early discontinuations (i.e. inclusion of all safety assessments as specified for the regular EOT visit), the expansion of event adjudication to include all SAEs (instead of fatal cases only), the addition of text regarding rescue treatment on days of Visit 7/7*, and the addition of a plausibility check between eDiary and RESPIMAT. FEV1 and FVC endpoints at individual time points were defined as further (instead of secondary) endpoints with actual values to be analysed instead of response. For the recording of SAEs a list of AEs that were defined as 'always serious AEs' was included to comply with a new BI internal procedure. The list was to come into effect for this trial once all countries and sites had received regulatory and ethics committee approval for the protocol revision. Since the trial was completed before all approvals were obtained, this SAE procedure was never implemented. Further specifications of the period during which contraception was required and a pregnancy test at the follow-up visit were added in response to an authority request. Instructions for clinical evaluation of liver injury were included to implement a new BI guideline to comply with the FDA guidance for industry 'Drug-Induced Liver Injury: Premarketing Clinical Evaluation'.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Additional combined primary and/or secondary endpoints are defined and analysed for trial 1237.5 and 1237.6, however due to the platform limitations those could not be provided. Results can be found on CT.gov study number: NCT01431274.

Notes:
