Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 July 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 March 2017
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to compare the effect of panitumumab versus cetuximab on overall survival (OS) for chemorefractory metastatic colorectal cancer (mCRC) among patients with wild-type Kirsten rat Sarcoma-2 virus (KRAS) tumors.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines.

The protocol and amendment were reviewed by an Independent Ethics Committee (IEC) or Institutional Review Board (IRB) at each center.

The investigator or a designee was to obtain written informed consent from all subjects or legally acceptable representatives after adequate explanation of the aims, methods, anticipated benefits, and potential hazards of the study and before any protocol-specific screening procedures were conducted or investigational products were administered.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 February 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	24 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 105
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Canada: 15
Country: Number of subjects enrolled	France: 33
Country: Number of subjects enrolled	Italy: 40
Country: Number of subjects enrolled	Sweden: 29
Country: Number of subjects enrolled	United Kingdom: 82
Country: Number of subjects enrolled	United States: 9
Country: Number of subjects enrolled	Bulgaria: 6
Country: Number of subjects enrolled	China: 100
Country: Number of subjects enrolled	Czech Republic: 13
Country: Number of subjects enrolled	Hong Kong: 23
Country: Number of subjects enrolled	India: 50
Country: Number of subjects enrolled	Israel: 3

Country: Number of subjects enrolled	Korea, Republic of: 210
Country: Number of subjects enrolled	Latvia: 13
Country: Number of subjects enrolled	Lithuania: 24
Country: Number of subjects enrolled	Malaysia: 21
Country: Number of subjects enrolled	Peru: 11
Country: Number of subjects enrolled	Philippines: 8
Country: Number of subjects enrolled	Poland: 64
Country: Number of subjects enrolled	Russian Federation: 80
Country: Number of subjects enrolled	Serbia: 3
Country: Number of subjects enrolled	Singapore: 12
Country: Number of subjects enrolled	Slovakia: 5
Country: Number of subjects enrolled	South Africa: 23
Country: Number of subjects enrolled	Taiwan: 25
Worldwide total number of subjects	1010
EEA total number of subjects	312

Notes:

---

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	657
From 65 to 84 years	350
85 years and over	3

## Subject disposition

### Recruitment

Recruitment details:

A total of 1010 subjects with wild-type KRAS exon 2 mCRC were randomized into the global protocol from 133 study centers in 27 countries between 02 February 2010 and 19 July 2012.

### Pre-assignment

Screening details:

Enrollment was stratified by geographic region (North America, Western Europe, and Australia versus the rest of the world) and Eastern Cooperative Oncology Group (ECOG) performance status (0 or 1 versus 2) and randomized in a 1:1 ratio to receive either intravenous (IV) panitumumab or IV cetuximab.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cetuximab

Arm description:

Cetuximab 400 mg/m<sup>2</sup> as an initial dose, followed by 250 mg/m<sup>2</sup> intravenously (IV) every 7 days until disease progression, intolerability, withdrawal of consent, or death.

Arm type	Active comparator
Investigational medicinal product name	Cetuximab
Investigational medicinal product code	
Other name	Erbitux
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Cetuximab was administered by IV infusion on day 1 of each 7-day cycle. The initial loading dose of cetuximab was 400 mg/m<sup>2</sup>. All subsequent doses were 250 mg/m<sup>2</sup>.

<b>Arm title</b>	Panitumumab
------------------	-------------

Arm description:

Panitumumab 6 mg/kg IV every 14 days until disease progression, intolerability, withdrawal of consent, or death.

Arm type	Experimental
Investigational medicinal product name	Panitumumab
Investigational medicinal product code	
Other name	Vectibix
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Panitumumab was administered by IV infusion at a dose of 6 mg/kg on day 1 of every 14-day cycle.

<b>Number of subjects in period 1</b>	Cetuximab	Panitumumab
Started	504	506
Received Treatment	500	499
Completed	0	2
Not completed	504	504
Consent withdrawn by subject	19	20
Administrative decision	14	15
Death	454	448
Lost to follow-up	15	21
Ineligibility determined	2	-

## Baseline characteristics

### Reporting groups

Reporting group title	Cetuximab
Reporting group description: Cetuximab 400 mg/m <sup>2</sup> as an initial dose, followed by 250 mg/m <sup>2</sup> intravenously (IV) every 7 days until disease progression, intolerability, withdrawal of consent, or death.	
Reporting group title	Panitumumab
Reporting group description: Panitumumab 6 mg/kg IV every 14 days until disease progression, intolerability, withdrawal of consent, or death.	

Reporting group values	Cetuximab	Panitumumab	Total
Number of subjects	504	506	1010
Age Categorical			
Units: Subjects			
< 65 years	319	338	657
≥ 65 years	185	168	353
Age Continuous			
Units: years			
arithmetic mean	60.2	59.6	
standard deviation	± 11.2	± 10.9	-
Gender Categorical			
Units: Subjects			
Female	183	187	370

## End points

### End points reporting groups

Reporting group title	Cetuximab
Reporting group description: Cetuximab 400 mg/m <sup>2</sup> as an initial dose, followed by 250 mg/m <sup>2</sup> intravenously (IV) every 7 days until disease progression, intolerability, withdrawal of consent, or death.	
Reporting group title	Panitumumab
Reporting group description: Panitumumab 6 mg/kg IV every 14 days until disease progression, intolerability, withdrawal of consent, or death.	

### Primary: Overall Survival

End point title	Overall Survival
End point description: Overall survival (OS) is the time from the date of randomization until the date of death. Participants who had not died by the analysis data cut-off date were censored at their last contact date. The analysis was conducted using the primary analysis set, which included all participants who were randomized and who received at least 1 dose of panitumumab or cetuximab; analyzed according to randomized treatment arm.	
End point type	Primary
End point timeframe: From randomization until the final analysis data cut-off date of 18 July 2014. Median time on study was 41 weeks, maximum time on study was 214 weeks.	

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	500	499		
Units: months				
median (confidence interval 95%)	9.9 (9.0 to 10.8)	10.2 (9.4 to 11.4)		

### Statistical analyses

Statistical analysis title	Primary Analysis of Overall Survival
Statistical analysis description: The hazard ratio and its corresponding 95% CI were estimated from a Cox proportional hazards model stratified by the randomization factors (geographic region [North America, western Europe and Australia vs rest of world] and ECOG performance status [0 or 1 vs 2]). The hazard ratio is presented as panitumumab : cetuximab. A value < 1.0 indicates a lower average event rate and longer time to event for panitumumab relative to cetuximab.	
Comparison groups	Cetuximab v Panitumumab

Number of subjects included in analysis	999
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[1]</sup>
P-value	= 0.0002
Method	Asymptotic standard normal test
Parameter estimate	Cox proportional hazard
Point estimate	0.938
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.823
upper limit	1.071

Notes:

[1] - A synthesis approach with an asymptotic standard normal test statistic based on the logarithm of the hazard ratio was used to test the hypothesis that panitumumab is noninferior to cetuximab for OS (ie, that panitumumab retains at least 50% of the OS benefit of cetuximab relative to BSC). The OS noninferiority hypothesis based on an asymptotic normal score was tested at a 1-sided 2.5% significance level. A value < -1.96 indicates non-inferiority at a significance level of 1-sided 0.025.

## Secondary: Progression-free Survival

End point title	Progression-free Survival
End point description:	
<p>Progression free survival (PFS) is the time from the date of randomization to the date of disease progression per the Response Evaluation Criteria In Solid Tumors (RECIST) version 1.1 or death. Participants alive and not meeting criteria for progression by the analysis data cut-off date were censored at their last evaluable disease assessment date.</p> <p>Progression is defined as at least a 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study based on all target lesions recorded since the treatment started (the sum must also demonstrate an absolute increase of at least 5 mm), or unequivocal progression of existing non-target lesions, or any new lesions.</p> <p>The analysis was conducted using the primary analysis set.</p>	
End point type	Secondary
End point timeframe:	
From randomization until the final analysis data cut-off date of 18 July 2014. Median time on study was 41 weeks, maximum time on study was 214 weeks.	

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	500	499		
Units: months				
median (confidence interval 95%)	4.4 (3.2 to 4.8)	4.2 (3.2 to 4.8)		

## Statistical analyses

Statistical analysis title	Analysis of Progression-Free Survival
Statistical analysis description:	
<p>The hazard ratio and its corresponding 95% CI were estimated from a Cox proportional hazards model stratified by the randomization factors (geographic region [North America, western Europe and Australia vs rest of world] and ECOG performance status [0 or 1 vs 2]).</p> <p>The hazard ratio is presented as panitumumab : cetuximab. A value &lt; 1.0 indicates a lower average event rate and longer time to event for panitumumab relative to cetuximab.</p>	

Comparison groups	Cetuximab v Panitumumab
Number of subjects included in analysis	999
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Cox proportional hazard
Point estimate	0.984
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.867
upper limit	1.117

## Secondary: Objective Response

End point title	Objective Response
End point description:	
Assessments are based on the investigator's review of scans using modified RECIST v1.1. Objective response is defined as either a complete response (CR) or partial response (PR). Participants who did not meet the criteria for an objective response by the analysis cut-off date were considered non-responders.	
CR: Disappearance of all target and non-target lesions, any pathological lymph nodes (whether target or non-target) must have reduction in short axis to <10 mm, and no new lesions.	
PR: Disappearance of all target lesions, persistence of one or more non-target lesions not qualifying for either CR or progressive disease, or, at least a 30% decrease in the size of target lesions with no unequivocal progression of existing non-target lesions and no new lesions.	
Objective response was analyzed using the tumor response analysis set, which includes participants in the primary analysis set with at least 1 baseline unidimensionally measurable lesion per RECIST version 1.1.	
End point type	Secondary
End point timeframe:	
From randomization until the final analysis data cut-off date of 18 July 2014. Median time on study was 41 weeks, maximum time on study was 214 weeks.	

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	485	486		
Units: percentage of participants				
number (confidence interval 95%)	19.79 (16.34 to 23.62)	22.02 (18.41 to 25.97)		

## Statistical analyses

Statistical analysis title	Analysis of Objective Response
Statistical analysis description:	
The common treatment odds ratio stratified by geographic region (North America, western Europe and Australia vs rest of world) and ECOG performance status (0 or 1 vs 2).	
The odds ratio is defined as the odds of having an objective response (CR or PR) in the panitumumab arm relative to the odds in the cetuximab arm.	
Comparison groups	Cetuximab v Panitumumab

Number of subjects included in analysis	971
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	Odds ratio (OR)
Point estimate	1.15
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.83
upper limit	1.58

## Secondary: Duration of Response

End point title	Duration of Response
End point description:	
Duration of response (DOR), calculated only for those participants with an objective response, is the time from first objective response to disease progression per the RECIST v1.1 or death. Participants not meeting criteria for progression or who died by the analysis data cutoff date were censored at their last evaluable disease assessment date.	
End point type	Secondary
End point timeframe:	
From randomization until the final analysis data cut-off date of 18 July 2014. Median time on study was 41 weeks, maximum time on study was 214 weeks.	

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	96	107		
Units: months				
median (confidence interval 95%)	5.4 (3.9 to 5.5)	3.8 (3.7 to 4.8)		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Time to Response

End point title	Time to Response
End point description:	
Time to response (TTR), calculated for those participants with an objective response, is defined as the time from the randomization date to the date of first objective response.	
End point type	Secondary
End point timeframe:	
From randomization until the final analysis data cut-off date of 18 July 2014. Median time on study was 41 weeks, maximum time on study was 214 weeks.	

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	96	107		
Units: months				
median (inter-quartile range (Q1-Q3))	2.56 (1.23 to 3.07)	1.48 (1.18 to 3.02)		

## Statistical analyses

No statistical analyses for this end point

## Secondary: Time to Treatment Failure

End point title	Time to Treatment Failure
-----------------	---------------------------

End point description:

Time to treatment failure (TTF) is the time from the randomization date to the date that the decision was made to end the treatment period for any reason; participants who remained in the treatment period at the time of analysis were censored at the date of the last on-study assessment. The analysis was conducted using the primary analysis set.

End point type	Secondary
----------------	-----------

End point timeframe:

From randomization until the final analysis data cut-off date of 18 July 2014. Median time on study was 41 weeks, maximum time on study was 214 weeks.

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	500	499		
Units: months				
median (confidence interval 95%)	3.3 (3.2 to 3.9)	3.4 (3.2 to 4.6)		

## Statistical analyses

Statistical analysis title	Analysis of Time to Treatment Failure
----------------------------	---------------------------------------

Statistical analysis description:

The hazard ratio and its corresponding 95% CI were estimated from a Cox proportional hazards model stratified by the randomization factors (geographic region [North America, western Europe and Australia vs rest of world] and ECOG performance status [0 or 1 vs 2]).

The hazard ratio is presented as panitumumab : cetuximab. A value < 1.0 indicates a lower average event rate and longer time to event for panitumumab relative to cetuximab.

## Secondary: Change From Baseline in EuroQOL 5 Dimension (EQ-5D) Health State Index Score

End point title	Change From Baseline in EuroQOL 5 Dimension (EQ-5D) Health State Index Score
-----------------	--

### End point description:

The EQ-5D is a generic measure of health outcome. The health state index measures 5 health dimensions: mobility, self-care, usual activities, pain/discomfort and anxiety/depression, using 3 levels of response to reflect degree of problems: no problem (1), some problem (2) and extreme problems (3). The health states for each respondent are converted into a single index number using a specified set of weights. Resulting scores can range from 1.0 and -0.594. A higher score indicates a more preferred health status with 1.0 representing perfect health and 0 representing death. Negative scores are possible and represent health states regarded as less preferable than death (0). The analysis was conducted using the patient reported outcomes (PRO) analysis set, which included all participants in the primary analysis set who had a baseline and at least one follow-up PRO assessment prior to clinical or objective disease progression per RECIST v1.1. Participants with available data are included.

End point type	Secondary
----------------	-----------

### End point timeframe:

From Study Day 1 through the last day of treatment or disease progression, up to Week 85.

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	150	143		
Units: scores on a scale				
least squares mean (confidence interval 95%)	-0.0341 (-0.0806 to 0.0123)	-0.0216 (-0.0691 to 0.0260)		

## Statistical analyses

Statistical analysis title	Analysis of EQ-5D Health State Index Score
----------------------------	--

### Statistical analysis description:

Repeated measures mixed model includes treatment, geographic region, ECOG score, assessment week, and treatment by assessment week interaction as fixed effects, and subjects a random effect. An unstructured covariance matrix is used in the mixed model. A positive difference between the treatment groups favors the panitumumab group.

Comparison groups	Cetuximab v Panitumumab

Point estimate	0.0126
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.0353
upper limit	0.0605

## Secondary: Change From Baseline in EuroQOL 5 Dimension (EQ-5D) Visual Analog Scale (VAS)

End point title	Change From Baseline in EuroQOL 5 Dimension (EQ-5D) Visual Analog Scale (VAS)
-----------------	---

End point description:

The EQ-5D is a standardized instrument for use as a generic measure of health outcome. The VAS asks respondents to rate their present health status on a scale from 0 to 100, with 0 labeled as "Worst imaginable health state" and 100 labeled as "Best imaginable health state." The VAS score is determined by observing the point at which the participant's hand drawn line intersects the scale. The analysis was conducted using the patient reported outcomes (PRO) analysis set with available data.

End point type	Secondary
----------------	-----------

End point timeframe:

From Study Day 1 through the last day of treatment or disease progression, up to Week 85.

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	149	142		
Units: scores on a scale				
least squares mean (confidence interval 95%)	3.9782 (0.8842 to 7.0722)	2.3037 (-0.8532 to 5.4605)

## Secondary: Change From Baseline in National Comprehensive Cancer Network Functional Assessment of Cancer Therapy Colorectal Symptom Index (NCCN FCSI ) Symptoms Score

End point title	Change From Baseline in National Comprehensive Cancer Network Functional Assessment of Cancer Therapy Colorectal Symptom Index (NCCN FCSI ) Symptoms Score
-----------------	--

### End point description:

The FCSI consists of 9 questions comprising the most important symptoms associated with colorectal cancer, including energy, pain, weight, diarrhea, nausea, swelling or cramps in the stomach area, appetite, ability to enjoy life, and overall quality of life. The 9 questions are combined in three algorithms to provide information for 3 domains: colorectal cancer symptoms, physical well-being, and functional well-being. Each of the 9 items are scored from "0" to "4" representing "Not at All" through to "Very Much True". The raw score for all items is transformed to a 0-100 scale, and the average for each of the 3 subscales is calculated; high scores illustrate an improved state (e.g. able to enjoy life more). The analysis was conducted using the patient reported outcomes (PRO) analysis set with available data.

End point type	Secondary
----------------	-----------

### End point timeframe:

From Study Day 1 through the last day of treatment or disease progression, up to Week 85.

The raw score for all items is transformed to a 0-100 scale, and the average for each of the 3 subscales is calculated; high scores illustrate an improved state (e.g. able to enjoy life more). The analysis was conducted using the patient reported outcomes (PRO) analysis set with available data.

End point type	Secondary
----------------	-----------

### End point timeframe:

From Study Day 1 through the last day of treatment or disease progression, up to Week 85.

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	152	143		
Units: scores on a scale				
least squares mean (confidence interval 95%)	1.3567 (-4.1564 to 6.8697)	1.1569 (-4.4887 to 6.8025)		

## Statistical analyses

Statistical analysis title	Analysis of NCCN FCSI Functional Well-being Scale
----------------------------	---

### Statistical analysis description:

Repeated measures mixed model includes treatment, geographic region, ECOG score, assessment week, and treatment by assessment week interaction as fixed effects, and subjects a random effect. An unstructured covariance matrix is used in the mixed model.

A positive difference between the treatment groups favors the panitumumab group.

Comparison groups	Cetuximab v Panitumumab
-------------------	-------------------------

Number of subjects included in analysis	295
Analysis specification	Pre-specified
Analysis type	other
Parameter estimate	LS Mean Difference
Point estimate	-0.1998
Confidence interval	
level	95 %
sides	2-sided
lower limit	-6.0093
upper limit	5.6098

### Secondary: Number of Participants With Adverse Events (AEs)

End point title	Number of Participants With Adverse Events (AEs)
End point description:	
<p>Serious adverse events include any event that is fatal, life threatening, requires inpatient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability/incapacity, a congenital anomaly/birth defect, or other significant medical hazard. Treatment-related AEs are those the investigator considered as a reasonable possibility to have been caused by study drug.</p> <p>The safety analysis set included all randomized participants who received at least 1 dose of study medication. Five participants who received the incorrect study medication (4 assigned to panitumumab but received cetuximab and 1 assigned to cetuximab but received panitumumab) were included in different treatment arms for safety analyses.</p>	
End point type	Secondary
End point timeframe:	
From the day of the first dose of study therapy through 30 days after the last dose. Median duration of treatment was 14 weeks.	

End point values	Cetuximab	Panitumumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	503	496		
Units: participants				
Any adverse event (AE)	494	487		
Serious adverse events	171	151		
AEs leading to discontinuation of study drug	62	69		
Treatment-related adverse events (TRAE)	459	438		
Treatment-related serious adverse events	22	24		
TRAEs leading to discontinuation of study drug	15	14		

### Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From the day of the first dose of study therapy through 30 days after the last dose. Median duration of treatment was 14 weeks.

Adverse event reporting additional description:

The safety analysis set included all randomized participants who received at least 1 dose of study medication. Five participants who received the incorrect study medication (4 assigned to panitumumab but received cetuximab and 1 assigned to cetuximab but received panitumumab) were included in different treatment arms for safety analyses.

Assessment type	Systematic

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	17.0
--------------------	------

### Reporting groups

Reporting group title	Cetuximab
-----------------------	-----------

Reporting group description:

Cetuximab 400 mg/m<sup>2</sup> as an initial dose, followed by 250 mg/m<sup>2</sup> intravenously (IV) every 7 days until disease progression, intolerability, withdrawal of consent, or death.

Reporting group title	Panitumumab
-----------------------	-------------

Reporting group description:

Panitumumab 6 mg/kg IV every 14 days until disease progression, intolerability, withdrawal of consent, or death.

Serious adverse events	Cetuximab	Panitumumab	
Total subjects affected by serious adverse events			
subjects affected / exposed	171 / 503 (34.00%)	151 / 496 (30.44%)

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 September 2012	<ul style="list-style-type: none"><li>- clarified that crossover was not permitted on study while a subject was receiving study treatment</li><li>- clarified that subjects were to be treated until disease progression, intolerability, withdrawal of consent, or death and were to be followed for survival until death, full withdrawal of consent, or end of the long term follow-up period</li><li>- included definitions of primary completion (the time when the last subject was assessed or received an intervention for the purposes of final collection of data for the primary endpoint of OS) and end of study (the time when the last subject was assessed or received an intervention for evaluation in the study [eg, during follow-up])</li><li>- clarified rules for missed doses and dose withholding clarified that Amgen could do additional testing on samples collected (blood or tumor tissue) in the study for any of the tests outlined in the protocol, for any tests necessary to minimize risks to study subjects, and for other exploratory research (if consent was provided).</li><li>- clarified that sites were allowed to conduct a search of public records, such as those establishing survival status, to obtain survival data for any subject for whom survival status was not known at time of data cutoff for the primary and/or final analysis</li></ul>

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported
