

Clinical trial results:

A randomized, multi-center, parallel group, double blind, study to assess the safety of QMF Twisthaler® (500/400g) and mometasone furoate Twisthaler® (400g) in adolescent and adult patients with persistent asthma.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 May 2011
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	06 May 2011
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study was to compare the time to first serious asthma exacerbation resulting in hospitalisation, intubation or death in the subjects treated with the study drug either once daily QMF149 500/400 microgram (µg) or mometasone furoate (MF) 400 µg.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed. Rescue medication was allowed as recommended by the treating physician based on asthma management standard of care. Short acting β₂-adrenergic agonists (salbutamol/albuterol) were permitted for the treatment of asthma exacerbations during the study. The investigator provided follow-up medical care for all subjects who were prematurely withdrawn from the study, or referred them for appropriate ongoing care.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 July 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

From 65 to 84 years	85
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 174 centres in 9 countries.

Pre-assignment

Screening details:

2282 subjects screened, 1519 subjects randomized and 1518 received study drug. 11 randomized patients were excluded from all analysis population (i.e. FAS, PPS, Safety Set, and PK Set) because one patient was not treated, three patients did not sign the informed consent form, 7 patients from center 39 where Ethics Committee did not approve Amend 1.

Period 1

Period 1 title	Baseline period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Assessor

Blinding implementation details:

The identity of the treatments was concealed by the use of study drugs that were all identical in appearance of packaging, labeling and schedule. Unblinding was allowed only in case of subjects emergencies and at the conclusion of the study.

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1: QMF149

Arm description:

Subjects were administered with QMF149 (Indacaterol maleate 500 µg/mometasone furoate 400 µg), once daily (o.d) in evening via Twisthaler® (a multi-dose powder inhaler).

Arm type	Experimental
Investigational medicinal product name	Indacaterol maleate/mometasone furoate
Investigational medicinal product code	QMF149
Other name	
Pharmaceutical forms	Inhalation powder, pre-dispensed
Routes of administration	Inhalation use

Dosage and administration details:

QMF149 (Indacaterol maleate 500 µg/mometasone furoate 400 µg) was administered o.d via Twisthaler®.

Arm title	Cohort 2: Mometasone furoate
------------------	------------------------------

Arm description:

Subjects were administered with MF 400 µg, o.d in evening via Twisthaler (a multi-dose powder inhaler).

Arm type	Experimental
Investigational medicinal product name	Mometasone furoate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Nasal powder
Routes of administration	Inhalation use

Dosage and administration details:

MF 400 µg was administered o.d via Twisthaler.

Number of subjects in period 1	Cohort 1: QMF149	Cohort 2: Mometasone furoate

Primary: Time to first serious asthma exacerbation

End point title	Time to first serious asthma exacerbation
End point description: Time to first serious asthma exacerbation was defined as the number of days from start of treatment up to the first date when an asthma exacerbation becomes serious (i.e. the date of hospitalisation, intubation or death, whichever occurred first). Subjects who did not experience a serious asthma exacerbation were censored at their last follow-up date. The analysis was performed in full analysis set (FAS), defined as all randomised subjects who received at least one dose of study medication.	
End point type	Primary
End point timeframe: From randomisation up to Month 21	

End point values	Cohort 1: QMF149	Cohort 2: Mometasone furoate		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	749	759		
Units: Months				
median (full range (min-max))	13.3 (0 to 19.6)	13.4 (0 to 20.3)		

Statistical analyses

Statistical analysis title	Time to first serious asthma exacerbation
Statistical analysis description: The Cox proportional hazards regression model was used to analyse serious asthma exacerbation stratified by asthma related hospitalization, asthma worsening and African American subjects.	
Comparison groups	Cohort 1: QMF149 v Cohort 2: Mometasone furoate

Number of subjects included in analysis	1508
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.076 ^[1]
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.31
Confidence interval	
level	90 %
sides	1-sided
lower limit	0.08

Notes:

[1] - The one-sided p-value was based on the hypothesis 'Hazard ratio QMF149 / MF ≥ 1 ' vs. the alternative 'Hazard ratio QMF149 / MF < 1 '. A hazard ratio < 1 favors QMF149.

Secondary: Incidence of serious asthma exacerbation resulting in hospitalisation, intubation or death

End point title	Incidence of serious asthma exacerbation resulting in hospitalisation, intubation or death
-----------------	--

End point description:

The incidence rate of the first serious asthma exacerbation was defined as the number of subjects with at least one serious asthma exacerbations over the course of the study. A serious asthma exacerbation was one that resulted in hospitalisation, intubation or death. The analysis was performed in FAS population.

End point type	Secondary

Secondary: Change from baseline in trough forced expiration volume in 1 second (trough FEV1) to Month 21

End point title	Change from baseline in trough forced expiration volume in 1 second (trough FEV1) to Month 21
-----------------	---

End point description:

Trough FEV1 was defined as the volume of air expired in 1 second. Trough FEV1 was assessed as a pulmonary function by using spirometry tests in accordance with American Thoracic Society/European Respiratory Society (ATS/ERS) criteria. Change from baseline in trough FEV1 measured at 15 minutes before dosing was analysed. Trough FEV1 measurements within 6 hours of rescue medication use were excluded from analysis. Positive change from baseline indicated improvement. The analysis was performed in FAS population. Here, "Number of subjects analysed" signifies those subjects evaluable for trough FEV1 at specified time points for each arm, respectively.

End point title	Number of subjects with adverse events (AEs), AEs related to study drug, serious adverse events (SAEs), AE/SAEs leading to discontinuation and deaths during the study
-----------------	--

End point description:

An AE was defined as any unfavorable and unintended sign, symptom, or disease temporally associated with the use of study drug, whether or not related to study drug. A SAE was defined as an event which was fatal or life threatening, required or prolonged hospitalisation, was significantly or permanently disabling or incapacitating, constituted a congenital anomaly or a birth defect, or encompassed any other clinically significant event that could jeopardize the subject or require medical or surgical intervention to prevent one of the aforementioned outcomes. Treatment related AEs were defined as AEs that were suspected to be related to study treatment as per investigator. Based on the severity, AEs were categorised into 3 types as mild, moderate and severe. Death was a fatal event leading to permanent cessations of all vital functions of the body. The analysis was performed in safety set, defined as all the subjects who received at least one dose of study medication.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All Adverse events are reported in this record from First Patient First Treatment until Last Patient Last Visit.

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 March 2011	<ol style="list-style-type: none">1. Clarification for the premature study drug discontinuation due to prohibited concomitant medication was provided .2. The primary safety endpoint was ammended from "time to the first serious asthma exacerbation" to "rate of serious asthma exacerbations". The new key secondary analysis was added for secondary objective to compare the rate of the first serious asthma exacerbations resulting in hospitalization, intubation, or death of subjects.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
