### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 December 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 March 2018
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of the GETUG-AFU19 study was the evaluation of efficacy in terms of progression-free survival at 9 months of the combination of intensified methotrexate, vinblastine, doxorubicin and cisplatin (I-MVAC) with or without panitumumab as first-line treatment of advanced urothelial carcinoma in patients without H-Ras nor K-Ras mutations.

Protection of trial subjects:

In order to ensure the protection of the rights, safety and well-being of trial subjects, this study was conducted in accordance with the ethical principles that have their origins in the latest version of the Declaration of Helsinki (1964) and subsequent amendments, ICH Good Clinical Practice Guidelines (CPMP/ICH/135/95), the European Directive (2001/20/CE) on the conduct of clinical trials and subsequent texts (Eudralex Vol 10), and the applicable local regulatory requirements and laws (The Huriet Law N°88-1138 of the 20th December 1998 on the protection of persons taking part in biomedical research; The National Informatics and Freedoms Commission – Law N° 78-17 of the 6th January 1978 modified by the law N° 2004-801 of the 6th August 2004 concerning the protection of the person with regards to the use of personal data; Bioethical law N°2011-814 of the 8th July 2011).

Furthermore, independent Ethics Committees reviewed and gave favorable opinions to the study documents, including the initial protocol and all subsequent amendments, and all information and documents provided to subjects/patients.

Written informed consent was obtained from all patients prior to enrollment.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 September 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	France: 97
Worldwide total number of subjects	97
EEA total number of subjects	97

Notes:

### Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	52
From 65 to 84 years	45
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

The GETUG-AFU 19 was a multicentre, randomised phase II trial that evaluated the efficacy of intensified methotrexate, vinblastine, doxorubicin and cisplatin (I-MVAC) with or without panitumumab as first-line treatment of advanced urothelial carcinoma in patients without H-Ras nor K-Ras mutations.

### Pre-assignment

Screening details:

The study consisted of a 28-day screening phase to establish patients' eligibility and document baseline measurements, a treatment phase (28-day cycle till disease progression - 6 cycles maximum), and a long-term follow-up to monitor the progression-free survival, the response rate, time to progression, overall survival, and toxicity.

### Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
Arm title	I-MVAC

Arm description:

Standard of care treatment. patients randomized in the I-MVAC arm received intravenous injection of methotrexate, vinblastine, doxorubicin, and cisplatin every two weeks until disease progression for a maximum of 6 cycles. Furthermore, patients received two subcutaneous injection of G-CSF at each cycle to decrease chemotherapy toxicity.

Arm type	Active comparator
Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous drip use

Dosage and administration details:

Intravenous administration at a dose of 30mg/m<sup>2</sup> over 30 min in 100 ml of 5% glucose solution

Investigational medicinal product name	Vinblastine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate and solution for solution for infusion
Routes of administration	Intravenous drip use

Dosage and administration details:

Intravenous administration at a dose of 3 mg/m<sup>2</sup> over 15 min in 50 ml of 0.9% sodium chloride

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate and solution for solution for infusion, Powder for infusion
Routes of administration	Intravenous drip use

Dosage and administration details:

Intravenous administration at a dose of 30 mg/m<sup>2</sup> over 30 min in 100 ml of 5% glucose solution

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous drip use

**Dosage and administration details:**

Intravenous administration at a dose of 70 mg/m<sup>2</sup> over 2 hours in 250 ml of 0.9% sodium chloride, in between hyperhydration with 3 litres of 0.9% sodium chloride/24 hours, having started 24 hours before the cisplatin infusion and to be continued up to 24 hours after the end of the cisplatin infusion.

Administration of magnesium to prevent magnesium loss might be performed

<b>Arm title</b>	I-MVAC plus panitumumab
------------------	-------------------------

**Arm description:**

Patients randomized in the I-MVAC plus panitumumab arm received intravenous injection of methotrexate, vinblastine, doxorubicin, cisplatin, and panitumumab every two weeks until disease progression for a maximum of 6 cycles. Furthermore, patients received two subcutaneous injection of G-CSF at each cycle to decrease chemotherapy toxicity.

After stopping treatment with I-MVAC, if panitumumab is well tolerated and in the absence of disease progression, panitumumab was continued alone as per the same regimen up to disease progression or the end of follow-up at 24 months.

Arm type	Experimental
Investigational medicinal product name	Methotrexate
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous drip use

**Dosage and administration details:**

Intravenous administration at a dose of 30mg/m<sup>2</sup> over 30 min in 100 ml of 5% glucose solution

Investigational medicinal product name	Vinblastine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate and solution for solution for infusion
Routes of administration	Intravenous drip use

**Dosage and administration details:**

Intravenous administration at a dose of 3 mg/m<sup>2</sup> over 15 min in 50 ml of 0.9% sodium chloride

Investigational medicinal product name	Doxorubicin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for concentrate and solution for solution for infusion, Powder for infusion
Routes of administration	Intravenous drip use

**Dosage and administration details:**

Intravenous administration at a dose of 30 mg/m<sup>2</sup> over 30 min in 100 ml of 5% glucose solution

Investigational medicinal product name	Cisplatin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for infusion
Routes of administration	Intravenous drip use

**Dosage and administration details:**

Intravenous administration at a dose of 70 mg/m<sup>2</sup> over 2 hours in 250 ml of 0.9% sodium chloride, in between hyperhydration with 3 litres of 0.9% sodium chloride/24 hours, having started 24 hours before the cisplatin infusion and to be continued up to 24 hours after the end of the cisplatin infusion.

Administration of magnesium to prevent magnesium loss might be performed

Investigational medicinal product name	Panitumumab
Investigational medicinal product code	
Other name	

Pharmaceutical forms	Concentrate and solvent for solution for infusion
Routes of administration	Intravenous drip use

Dosage and administration details:

Intravenous administration at a dose of 6 mg/kg over 1 hour in 100 ml of 0.9% sodium chloride solution, 1 hour after cisplatin

## End points

### End points reporting groups

Reporting group title	I-MVAC
-----------------------	--------

Reporting group description:

Standard of care treatment. patients randomized in the I-MVAC arm received intravenous injection of methotrexate, vinblastine, doxorubicin, and cisplatin every two weeks until disease progression for a maximum of 6 cycles. Furthermore, patients received two subcutaneous injection of G-CSF at each cycle to decrease chemotherapy toxicity.

Reporting group title	I-MVAC plus panitumumab
-----------------------	-------------------------

Reporting group description:

Patients randomized in the I-MVAC plus panitumumab arm received intravenous injection of methotrexate, vinblastine, doxorubicin, cisplatin, and panitumumab every two weeks until disease progression for a maximum of 6 cycles. Furthermore, patients received two subcutaneous injection of G-CSF at each cycle to decrease chemotherapy toxicity.

After stopping treatment with I-MVAC, if panitumumab is well tolerated and in the absence of disease progression, panitumumab was continued alone as per the same regimen up to disease progression or the end of follow-up at 24 months.

Subject analysis set title	Efficacy population
----------------------------	---------------------

Subject analysis set type	Modified intention-to-treat
---------------------------	-----------------------------

Subject analysis set description:

All patients without major violations of eligibility criteria, and evaluable

Subject analysis set title	Safety population
----------------------------	-------------------

Subject analysis set type	Safety analysis
---------------------------	-----------------

Subject analysis set description:

All patients that received at least administration of a study drugs (MVAC or panitumumab). The patients were analysed according to the actual treatment they received

### Primary: 9-month progression-free survival

End point title	9-month progression-free survival <sup>[1]</sup>
-----------------	--

End point description:

End point type	Primary
----------------	---------

End point timeframe:

The primary endpoint PFS was evaluated at 9 months

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: For this study, no formal statistical analysis between arms was planned. The treatment would be considered to be active if at least 37 patients among 62 did not show tumour progression at 9 months. Only 10 out of 63 patients were alive without disease progression at 9 months in the arm I-MVAC plus panitumumab. Thus, the combination of I-MVAC and panitumumab as first-line treatment of advanced urothelial carcinoma in patients without H-Ras nor K-Ras mutations is not considered sufficiently active

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 July 2011	<p>* In order not to exclude patients with bone metastases due to alkaline phosphatases exceeding the limits mentioned in the protocol, the inclusion criterion #10 was added so that patients with bone metastases and ALP &lt; grade 3 according to CTC-AE v 4 were eligible.</p> <p>* Approximately 30% of patients with urothelial cancer for whom prostate cancer is diagnosed during histopathological analysis of the cystectomy specimen. In order not to exclude patients with low-risk prostate cancer, and therefore without impact on the survival prognosis of these patients who also have urothelial cancer, the inclusion criterion #2 was reworded to specify the eligibility of these patients in this protocol.</p>
22 May 2012	Patients with brain metastasis require special management, particularly radiotherapy, which is not compatible with the chemotherapy proposed in the protocol. Thus, the non-inclusion criterion #2 was modified to include this parameter and the inclusion criterion #4 reworded.
11 September 2012	The inclusion period was extended by 2 years to allow inclusion of the last 50 patients.
15 July 2014	<p>* Initially, the protocol planned to register 107 patients and randomize 93, with a rate of 20% of patients not eligible for randomization and analysis. However, it has been observed that about 30% of the registered patients were not randomized (screening failure, death before randomization, deterioration of the general state before randomization, etc.) and that 15% of the randomized patients could not be taken into account in the analysis (absence of measurable lesions and/or untreated patients). Thus, the population to be screened was increased to 135 registered patients to reach 93 evaluable patients.</p> <p>* Given the need to increase the number of patients to be registered and given the average inclusion rate (3 patients/month), the inclusion period was extended by 8 months.</p>
26 March 2015	<p>* The inclusion period was extended by 8 months to allow inclusion of the last patients.</p> <p>* The calculation of the number of patients to be registered necessary to reach the objective of 93 analyzable patients was incorrect. Indeed, the estimated percentage of non-analyzable patients being 45% (30% of patients not randomized and 15% of patients randomized but not evaluable), the required number of patients to be registered was 170 patients and not 135 as specified in the amendment approved on 15-Jul-2014 .</p>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

For adverse events, the "total number of occurrences" was not reported, so the number of patients is noted in this field.

Notes:

---
