

Clinical trial results:

BREATHER (PENTA 16): Short-cycle therapy (SCT) (5 days on/ 2 days off) in young people with chronic HIV-infection

Summary

EudraCT number	2009-012947-40
Trial protocol	IE GB ES DK BE DE
Global end of trial date	31 July 2014

Results information

Result version number	v2 (current)
This version publication date	16 May 2019
First version publication date	04 February 2017
Version creation reason	<ul style="list-style-type: none">Changes to summary attachments The results posted to EudraCT for the BREATHER trial were reviewed by the senior statistician on the trial and as a result changes were required to be made.

Trial information

Trial identification

Sponsor protocol code	PENTA16

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 July 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 July 2014
Global end of trial reached?	Yes
Global end of trial date	31 July 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The overall aim of the BREATHER trial is to evaluate the role of Short-Cycle Therapy (SCT) in the management of HIV-infected young people who have responded well to antiretroviral therapy (ART) and to determine whether young people with chronic HIV infection undergoing Short-Cycle Therapy of five days on ART and two days off maintain the same level of viral load suppression as those on continuous therapy, over 48 weeks.

Protection of trial subjects:

In order to assess the safety of the SCT strategy, a pilot study was carried out in 32 young people, who were seen on the Monday morning following having Saturday and Sunday off treatment. Their viral loads were assessed on this visit and the main trial did not commence until the IDMC had confirmed they had no safety concerns as a result of the pilot phase.

Background therapy:

Every young person was on a first-line HAART regimen containing at least 2 NRTI/NtRTIs and EFV.

Evidence for comparator:

Current WHO guidelines recommend a first-line ART regimen containing 2 NRTI/NtRTIs and EFV for treatment of HIV in children.

Actual start date of recruitment	01 April 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Scientific research
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	United Kingdom: 26
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	Germany: 3
Country: Number of subjects enrolled	Ireland: 3
Country: Number of subjects enrolled	Thailand: 36
Country: Number of subjects enrolled	Argentina: 11
Country: Number of subjects enrolled	United States: 14
Country: Number of subjects enrolled	Uganda: 70
Country: Number of subjects enrolled	Ukraine: 20
Worldwide total number of subjects	199
EEA total number of subjects	48

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	53
Adolescents (12-17 years)	104
Adults (18-64 years)	42
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details: -

Pre-assignment period milestones

Number of subjects started	225 ^[1]
----------------------------	--------------------

Number of subjects completed	199
------------------------------	-----

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Consent withdrawn by subject: 3
Reason: Number of subjects	Protocol deviation: 21
Reason: Number of subjects	Car crash prevented them making randomisation visit: 1
Reason: Number of subjects	Unreliable attendance: 1

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 225 young people were screened, but 199 randomised. Reasons for not randomising are documented here.

Period 1

Period 1 title	Main trial (overall period)
----------------	-----------------------------

Is this the baseline period?	Yes
------------------------------	-----

Allocation method	Randomised - controlled
-------------------	-------------------------

Blinding used	Not blinded
---------------	-------------

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Continuous therapy
------------------	--------------------

Arm description:

Patients randomised to continuing their ART strategy, taking ART every day.

Arm type	No intervention
----------	-----------------

No investigational medicinal product assigned in this arm

Arm title	Short Cycle Therapy
------------------	---------------------

Arm description:

Patients take their ART as normal for 5 days a week, with a break at the weekends, taking no ART for 2 days every week.

The only product entered here is Efavirenz, as all young people in the trial were on Efavirenz. However, it is not the drug that is being investigated in this trial, it is the strategy by which the ART regimen is taken.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Efavirenz
--	-----------

Investigational medicinal product code	
--	--

Other name	
------------	--

Pharmaceutical forms	Tablet
----------------------	--------

Routes of administration	Oral use
--------------------------	----------

Dosage and administration details:

Dosed as prescribed by the clinician.

Number of subjects in period 1	Continuous therapy	Short Cycle Therapy
Started	100	99
Completed	99	99
Not completed	1	0
Lost to follow-up	1	-

median	0.3	0.2	
inter-quartile range (Q1-Q3)	0.2 to 0.4	0.2 to 0.3	-
Alkaline phosphatase			
Alkaline phosphatase at randomisation			
Units: milligram(s)/decilitre			
median	224	260.5	
inter-quartile range (Q1-Q3)	130 to 320	136 to 347	-
Aspartate transaminase			
Aspartate transaminase at randomisation			
Units: unit(s)/litre			
median	25	25	
inter-quartile range (Q1-Q3)	20 to 30	19 to 34	-
Alanine transaminase			
Alanine transaminase at randomisation			
Units: unit(s)/litre			
median	17.5	18	
inter-quartile range (Q1-Q3)	14 to 25	12 to 26	-
Glucose			
Glucose at randomisation			
Units: milligram(s)/decilitre			
median	86.5	86.4	
inter-quartile range (Q1-Q3)	81.5 to 90.9	82.9 to 91.9	-
Triglycerides			
Triglycerides at randomisation			
Units: milligram(s)/decilitre			
median	81	74.8	
inter-quartile range (Q1-Q3)	61.7 to 121	54.8 to 102.7	-
LDL Cholesterol			
LDL Cholesterol at randomisation			
Units: milligram(s)/decilitre			
median	85.6	89	
inter-quartile range (Q1-Q3)	76 to 108	78.1 to 107.4	-
HDL Cholesterol			
HDL Cholesterol at randomisation			
Units: milligram(s)/decilitre			
median	54.9	51	
inter-quartile range (Q1-Q3)	46.3 to 68.2	42.5 to 62	-
Total cholesterol			
Total cholesterol at randomisation			

Units: milligram(s)/decilitre			
median	164.1	158.2	
inter-quartile range (Q1-Q3)	147.3 to 181.5	142.9 to 181	-
Haemoglobin			
Haemoglobin at randomisation			
Units: gram(s)/decilitre			
median	13.2	13.2	
inter-quartile range (Q1-Q3)	12.3 to 14.2	12.2 to 14	-
MCV			
MCV at randomisation			
Units: femtolitres			
median	92	94	
inter-quartile range (Q1-Q3)	86 to 100.5	87.3 to 100.5	-
White cell count			
White cell count at randomisation			
Units: /litre			
median	5	4.6	
inter-quartile range (Q1-Q3)	4 to 6.3	3.9 to 6	-
Lymphocytes			
Lymphocytes at randomisation			
Units: /litre			
median	2.2	2.2	
inter-quartile range (Q1-Q3)	1.7 to 2.9	1.7 to 2.6	-
Neutrophils			
Neutrophils at randomisation			
Units: /litre			
median	1.9	1.9	
inter-quartile range (Q1-Q3)	1.2 to 3.4	1.4 to 2.9	-
Platelets			
Platelet count at randomisation			
Units: /litre			
median	292.5	293	
inter-quartile range (Q1-Q3)	247.5 to 352.5	244 to 352	-

End points

End points reporting groups

Reporting group title	Continuous therapy
Reporting group description: Patients randomised to continuing their ART strategy, taking ART every day.	
Reporting group title	Short Cycle Therapy
Reporting group description: Patients take their ART as normal for 5 days a week, with a break at the weekends, taking no ART for 2 days every week.	
The only product entered here is Efavirenz, as all young people in the trial were on Efavirenz. However, it is not the drug that is being investigated in this trial, it is the strategy by which the ART regimen is taken.	

Primary: Virological failure (≥ 50 c/ml confirmed).

End point title	Virological failure (≥ 50 c/ml confirmed).
End point description: The primary endpoint was a confirmed viral load ≥ 50 c/ml within 54 weeks of randomisation.	
End point type	Primary
End point timeframe: Any time from randomisation to 48(+6) weeks after randomisation.	

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	100	99		
Units: People				
Reached endpoint	7	6		
Did not reach endpoint	93	93		

Statistical analyses

Statistical analysis title	Primary analysis - diff in adj. KM estimates
Statistical analysis description: Difference in adjusted (for stratification factors) Kaplan-Meier survival function estimates at 54 weeks after randomisation.	
Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[1]
Parameter estimate	Mean difference (final values)
Point estimate	-0.012

Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.073
upper limit	0.049

Notes:

[1] - Non-inferiority margin = 12%.

Calculated SCT arm survival function - CT arm survival function, so if the upper bound of the 90% confidence interval was <0.12, the results were consistent with non-inferiority of SCT compared with CT.

Statistical analysis title	Secondary analysis - unadjusted diff
Statistical analysis description:	
Difference in Kaplan-Meier survival function estimates at 54 weeks after randomisation.	
Comparison groups	Short Cycle Therapy v Continuous therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[2]
Parameter estimate	Mean difference (final values)
Point estimate	-0.011
Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.068
upper limit	0.046

Notes:

[2] - Non-inferiority margin = 12%.

Calculated SCT arm survival function - CT arm survival function, so if the upper bound of the 90% confidence interval was <0.12, the results were consistent with non-inferiority of SCT compared with CT.

Statistical analysis title	Secondary analysis - crude diff
Statistical analysis description:	
Difference in proportion of YP with confirmed VL>=50c/ml.	
Comparison groups	Short Cycle Therapy v Continuous therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[3]
Parameter estimate	Mean difference (final values)
Point estimate	-0.009
Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.067
upper limit	0.048

Notes:

[3] - Non-inferiority margin = 12%.

Calculated proportion of YP with virological failure in the SCT arm - proportion of YP with virological failure in the CT arm, so if the upper bound of the 90% confidence interval was <0.12, the results were consistent with non-inferiority of SCT compared with CT.

Statistical analysis title	Secondary analysis - unadj. Cox model
Statistical analysis description:	
Cox model examining time to confirmed viral load >=50c/ml	

Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.755 ^[4]
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.84
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.34
upper limit	2.1

Notes:

[4] - Non-significant difference between arms.

Statistical analysis title	Secondary analysis - adj. Cox model
Statistical analysis description:	
Cox model examining time to confirmed viral load ≥ 50 c/ml, adjusting for stratification factors.	
Comparison groups	Short Cycle Therapy v Continuous therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.743 ^[5]
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.83
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.33
upper limit	2.08

Notes:

[5] - Non-significant difference between arms.

Secondary: Virological failure (≥ 400 c/ml confirmed).

End point title	Virological failure (≥ 400 c/ml confirmed).
End point description:	
Confirmed viral load ≥ 400 c/ml within 54 weeks of randomisation.	
End point type	Secondary
End point timeframe:	
Any time from randomisation to 48(+6) weeks after randomisation.	

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	100	99		
Units: People				
Reached endpoint	4	2		
Did not reach endpoint	96	97		

Statistical analyses

Statistical analysis title	Diff. in adj. KM estimates
Statistical analysis description:	
Difference in adjusted (for stratification factors) Kaplan-Meier survival function estimates at 54 weeks after randomisation.	
Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[6]
Parameter estimate	Mean difference (final values)
Point estimate	-0.021
Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.062
upper limit	0.019

Notes:

[6] - Calculated SCT arm survival function - CT arm survival function, so if the upper bound of the 90% confidence interval was <0.12, the results were consistent with non-inferiority of SCT compared with CT.

Statistical analysis title	Unadj. diff. in KM estimates
Statistical analysis description:	
Difference in Kaplan-Meier survival function estimates at 54 weeks after randomisation.	
Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[7]
Parameter estimate	Mean difference (final values)
Point estimate	-0.02
Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.061
upper limit	0.02

Notes:

[7] - Calculated SCT arm survival function - CT arm survival function, so if the upper bound of the 90% confidence interval was <0.12, the results were consistent with non-inferiority of SCT compared with CT.

Statistical analysis title	Crude diff. in proportion
Statistical analysis description:	
Difference in proportion of YP with confirmed VL≥400c/ml.	
Comparison groups	Continuous therapy v Short Cycle Therapy

Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	non-inferiority ^[8]
Parameter estimate	Mean difference (final values)
Point estimate	-0.02
Confidence interval	
level	90 %
sides	2-sided
lower limit	-0.06
upper limit	0.02

Notes:

[8] - Calculated proportion of YP with virological failure in the SCT arm - proportion of YP with virological failure in the CT arm, so if the upper bound of the 90% confidence interval was <0.12, the results were consistent with non-inferiority of SCT compared with CT.

Statistical analysis title	Unadj. Cox model
Statistical analysis description:	
Cox model examining time to confirmed viral load ≥ 400 c/ml	
Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.4
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.48
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.12
upper limit	2.01

Statistical analysis title	Adj. Cox model

Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	199
Analysis specification	Pre-specified
Analysis type	other
P-value	= 0.399
Method	Regression, Cox
Parameter estimate	Hazard ratio (HR)
Point estimate	0.48
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.12
upper limit	2

Secondary: SCT change strategy to continuous therapy

End point title	SCT change strategy to continuous therapy ^[9]
-----------------	--

End point description:

Any young person that changed strategy from SCT to return to taking daily ART, and reasons for changing.

The protocol states that young people should return to continuous therapy if they experience the primary endpoint, or have 3 viral load "blips" ≥ 50 c/ml, which have a subsequent VL reading that is < 50 c/ml.

End point type	Secondary
----------------	-----------

End point timeframe:

Any time from randomisation to week 48(+6).

Notes:

[9] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: Acceptability questionnaires only completed by those randomised to SCT.

End point values	Short Cycle Therapy			
Subject group type	Reporting group			
Number of subjects analysed	99			
Units: People				
Due to reaching primary endpoint	6			
Due to 3 unconfirmed blips	0			
Due to other reasons	2			

Statistical analyses

No statistical analyses for this end point

Secondary: Changes in ART regimen

End point title	Changes in ART regimen
-----------------	------------------------

End point description:

Number of individuals on a different ART regimen at week 48 to at week 0.

End point type	Secondary
----------------	-----------

End point timeframe:

Randomisation to week 48(+6).

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	99 ^[10]	99		
Units: People				
Change in ART regimen	9	3		
No change in ART regimen	90	96		

Notes:

[10] - 1 young person lost to follow up before week 48 visit

Statistical analyses

Statistical analysis title	Snapshot comparison at week 48 visit
Statistical analysis description: Fisher's exact test comparing number of young people still on their randomised regimen at week 48 from each arm.	
Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	198
Analysis specification	Post-hoc
Analysis type	equivalence
P-value	= 0.134
Method	Fisher exact

Secondary: Young people with major resistance mutations - any class

End point title	Young people with major resistance mutations - any class
End point description: Resistance tests were performed on everyone that reached the primary endpoint. "Major mutation" defined as in Johnson et. al., 2013, Topics in antiviral medicine.	
End point type	Secondary
End point timeframe: Randomisation to week 48(+6)	

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	7 ^[11]	6 ^[12]		
Units: People				
Major mutations present	5	2		
No major mutations present	1	1		
Test failed to amplify (insufficient viral load)	1	3		

Notes:

[11] - Only performed on young people that reached the primary endpoint.

[12] - Only performed on young people that reached the primary endpoint.

Statistical analyses

No statistical analyses for this end point

Secondary: Mean change in CD4% at week 48 from randomisation

End point title	Mean change in CD4% at week 48 from randomisation
-----------------	---

End point description:	
Reporting mean change from the global baseline value (across both arms).	
End point type	Secondary
End point timeframe:	
Randomisation and week 48 visit.	

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	94 ^[13]	93 ^[14]		
Units: percent				
arithmetic mean (standard error)	0.1 (± 0.4)	0.2 (± 0.4)		

Notes:

[13] - All patients with a reading at week 48 and week 0.

[14] - All patients with a reading at week 48 and week 0.

Statistical analyses

Statistical analysis title	Linear regression
-----------------------------------	-------------------

Statistical analysis description:

Linear regression of CD4% at week 48, adjusting for randomised arm, baseline CD4% and stratification factors. Presenting mean difference between arms.

Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	187
Analysis specification	Pre-specified

Other pre-specified: Mean change in CD8% at week 48 from randomisation

End point title	Mean change in CD8% at week 48 from randomisation
End point description:	Reporting mean change from the global baseline value (across both arms).
End point type	Other pre-specified
End point timeframe:	Randomisation and week 48 visit.

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	86 ^[59]	89 ^[60]		
Units: percent				
arithmetic mean (standard error)	-0.3 (± 0.5)	-0.5 (± 0.5)		

Notes:

[59] - All patients with a reading at week 48 and week 0.

[60] - All patients with a reading at week 48 and week 0.

Statistical analyses

Statistical analysis title	Linear regression.
Statistical analysis description: Linear regression of CD8% at week 48, adjusting for randomised arm, baseline CD8% and stratification factors. Presenting mean difference between arms.	
Comparison groups	Continuous therapy v Short Cycle Therapy
Number of subjects included in analysis	175
Analysis specification	Pre-specified
Analysis type	equivalence
P-value	= 0.8
Method	Regression, Linear
Parameter estimate	Mean difference (final values)
Point estimate	-0.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.6
upper limit	1.2

Other pre-specified: Mean change in absolute CD8 count at week 48 from randomisation

End point title	Mean change in absolute CD8 count at week 48 from randomisation
End point description: Reporting mean change from the global baseline value (across both arms).	
End point type	Other pre-specified
End point timeframe: Randomisation and week 48 visit.	

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	86 ^[61]	89 ^[62]		
Units: cells/microlitre				
arithmetic mean (standard error)	-14.8 (± 24.5)	-22.1 (± 23.8)		

Notes:

[61] - All patients with a reading at week 48 and week 0.

[62] - All patients with a reading at week 48 and week 0.

Statistical analyses

Statistical analysis title	Linear regression.
Statistical analysis description: Linear regression of absolute CD8 count at week 48, adjusting for randomised arm, baseline absolute CD8 count and stratification factors. Presenting mean difference between arms.	
Comparison groups	Continuous therapy v Short Cycle Therapy

Number of subjects included in analysis	175
Analysis specification	Pre-specified
Analysis type	equivalence
P-value	= 0.85
Method	Regression, Linear
Parameter estimate	Mean difference (final values)
Point estimate	-6.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-74.5
upper limit	61.7

Other pre-specified: Mean change in CD3% at week 48 from randomisation

End point title	Mean change in CD3% at week 48 from randomisation
End point description:	
Reporting mean change from the global baseline value (across both arms).	
End point type	Other pre-specified
End point timeframe:	
Randomisation and week 48 visit.	

End point values	Continuous therapy	Short Cycle Therapy		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	86 ^[63]	88 ^[64]		
Units: percent				
arithmetic mean (standard error)	-0.7 (± 0.7)	-0.7 (± 0.7)		

Notes:

[63] - All patients with a reading at week 48 and week 0.

[64] - All patients with a reading at week 48 and week 0.

Statistical analyses

Statistical analysis title	Linear regression.
Statistical analysis description:	
Linear regression of CD3% at week 48, adjusting for randomised arm, baseline CD3% and stratification factors. Presenting mean difference between arms.	
Comparison groups	Short Cycle Therapy v Continuous therapy
Number of subjects included in analysis	174
Analysis specification	Pre-specified
Analysis type	equivalence
P-value	= 0.99
Method	Regression, Linear
Parameter estimate	Mean difference (final values)
Point estimate	0

Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.9
upper limit	1.9

Other pre-specified: Mean change in absolute CD3 count at week 48 from randomisation

End point title	Mean change in absolute CD3 count at week 48 from randomisation
End point description: Reporting mean change from the global baseline value (across both arms).	
End point type	Other pre-specified
End point timeframe: Randomisation and week 48 visit.

lower limit	-163.7
upper limit	112.7

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Randomisation to 54 weeks after randomisation.

Adverse event reporting additional description:

For non-serious adverse events we reported grade three or four adverse clinical or laboratory adverse events or ART-related adverse events (any grade), excluding those meeting criteria for SAE.

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	16.0
--------------------	------

Reporting groups

Reporting group title	Continuous therapy
-----------------------	--------------------

Reporting group description:

Patients randomised to continuing their ART strategy, taking ART every day.

Reporting group title	Short Cycle Therapy
-----------------------	---------------------

Reporting group description:

Patients take their ART as normal for 5 days a week, with a break at the weekends, taking no ART for 2 days every week.

Serious adverse events	Continuous therapy	Short Cycle Therapy	
Total subjects affected by serious adverse events			
subjects affected / exposed	3 / 100 (3.00%)	6 / 99 (6.06%)	
number of deaths (all causes)	0	0	
number of deaths resulting from adverse events	0	0	
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Kaposi's sarcoma AIDS related			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Surgical and medical procedures			
Hospitalisation (following contusion of chest)			
subjects affected / exposed	1 / 100 (1.00%)	0 / 99 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Nervous system disorders			
Headache			

subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Hemiparesis			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Investigation (Collapsed)			
subjects affected / exposed	1 / 100 (1.00%)	0 / 99 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Pregnancy, puerperium and perinatal conditions			
Abortion spontaneous			
subjects affected / exposed	1 / 100 (1.00%)	1 / 99 (1.01%)	
occurrences causally related to treatment / all	1 / 1	1 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Respiratory, thoracic and mediastinal disorders			
Epistaxis			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Psychiatric disorders			
Suicidal ideation			
subjects affected / exposed	1 / 100 (1.00%)	0 / 99 (0.00%)	
occurrences causally related to treatment / all	1 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infections and infestations			
Measles			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Appendicitis			

subjects affected / exposed	1 / 100 (1.00%)	0 / 99 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	
Infective exacerbation of bronchiectasis			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences causally related to treatment / all	0 / 0	0 / 1	
deaths causally related to treatment / all	0 / 0	0 / 0	
Neurosyphilis			
subjects affected / exposed	1 / 100 (1.00%)	0 / 99 (0.00%)	
occurrences causally related to treatment / all	0 / 1	0 / 0	
deaths causally related to treatment / all	0 / 0	0 / 0	

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	Continuous therapy	Short Cycle Therapy	
Total subjects affected by non-serious adverse events			
subjects affected / exposed	19 / 100 (19.00%)	7 / 99 (7.07%)	
Investigations			
Blood alkaline phosphatase increased			
subjects affected / exposed	1 / 100 (1.00%)	0 / 99 (0.00%)	
occurrences (all)	1	0	
Blood bilirubin increased			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences (all)	0	1	
Blood calcium decreased			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences (all)	0	1	
Blood glucose decreased			
subjects affected / exposed	0 / 100 (0.00%)	1 / 99 (1.01%)	
occurrences (all)	0	1	
Low density lipoprotein increased			
subjects affected / exposed	1 / 100 (1.00%)	1 / 99 (1.01%)	
occurrences (all)	1	1	
Neutrophil count decreased			

subjects affected / exposed occurrences (all)	6 / 100 (6.00%) 6	2 / 99 (2.02%) 2	
Transaminases increased subjects affected / exposed occurrences (all)	2 / 100 (2.00%) 2	0 / 99 (0.00%) 0	
Surgical and medical procedures Inguinal hernia repair subjects affected / exposed occurrences (all)	1 / 100 (1.00%) 1	0 / 99 (0.00%) 0	
Nervous system disorders Headache subjects affected / exposed occurrences (all)	1 / 100 (1.00%) 1	0 / 99 (0.00%) 0	
Dizziness subjects affected / exposed occurrences (all)	1 / 100 (1.00%) 1	0 / 99 (0.00%) 0	
Reproductive system and breast disorders Gynaecomastia subjects affected / exposed occurrences (all)	2 / 100 (2.00%) 2	1 / 99 (1.01%) 1	
Skin and subcutaneous tissue disorders Lipohypertrophy subjects affected / exposed occurrences (all)	1 / 100 (1.00%) 1	0 / 99 (0.00%) 0	
Lipodystrophy acquired subjects affected / exposed occurrences (all)	5 / 100 (5.00%) 5	0 / 99 (0.00%) 0	
Infections and infestations Gastroenteritis subjects affected / exposed occurrences (all)	0 / 100 (0.00%) 0	1 / 99 (1.01%) 1	

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 April 2014	The TSC recommended that the participants are followed for 2 years after completion of the main trial (long term follow up).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
