End point timeframe:

assessed every 6 weeks until radiographic disease progression, and analyzed at the time of the primary analysis

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive endpoint (single arm, no across-arm comparison)

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Endpoint was only assessed for certain tumor types.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 October 2010	Suspended randomization stage and specified that all randomized subjects would undergo unblinding. Added new non-randomized cohorts ("NRE") for prostate cancer and ovarian cancer, with specific inclusion/exclusion criteria and endpoints. Updates to safety management guidelines.
22 August 2011	A second non-randomized cohort at a lower dose was added for prostate cancer. Inclusion/exclusion criteria for the non-randomized cohorts (prostate cancer and ovarian cancer) were revised. Updated safety management guidelines, including potential drug interactions. Added clarifications on dose modifications.
13 August 2012	Decreased some study procedures for subjects on study longer than 12 months.
