Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000036-PIP01-08
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	21 March 2013
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	21 March 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this study is to evaluate the safety of adalimumab in patients 2 to < 4 years of age or ≥ 4 years of age weighing < 15 kg, with moderately to severely active polyarticular juvenile idiopathic arthritis (JIA) or polyarticular course JIA.

Protection of trial subjects:

Parent or legal guardian read and understood the information provided about the study and gave written permission. An assent form was not used in this study due to the young age of children being studied.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 March 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czech Republic: 9
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	United States: 15
Worldwide total number of subjects	32
EEA total number of subjects	17

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	32
Adolescents (12-17 years)	0
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

Subjects were enrolled at 14 investigative sites in the Czech Republic, France, Germany, and the United States.

Pre-assignment

Screening details:

Subjects age 2 to < 4 years or ≥ 4 years and under 15 kg with moderately to severely active polyarticular or polyarticular-course JIA with a parent/guardian to administer injections. The screening visit occurred between Day -28 and Day 0.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Adalimumab
-----------	------------

Arm description:

Adalimumab 24 mg/m² body surface area (BSA) up to a total dose of 20 mg administered every other week (eow) by parent or designee as a single dose via subcutaneous injection at approximately the same time of day, for a minimum of 24 weeks. Subjects could continue in the study until age 4 and 15 kg (US and Puerto Rico) or for up to 1 additional year after reaching age 4 and 15 kg (EU). Visits beyond Week 24 occurred every 12 weeks for those subjects who continued in the study.

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira, ABT-D2E7
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Adalimumab administered by parent or designee as a single dose via subcutaneous injection at approximately the same time of day

Number of subjects in period 1	Adalimumab
Started	32
Completed	26
Not completed	6
Consent withdrawn by subject	3
Loss of efficacy	2
Lost to follow-up	1

Baseline characteristics

Reporting groups

Reporting group title	Adalimumab
-----------------------	------------

Reporting group description:

Adalimumab 24 mg/m² body surface area (BSA) up to a total dose of 20 mg administered every other week (eow) by parent or designee as a single dose via subcutaneous injection at approximately the same time of day, for a minimum of 24 weeks. Subjects could continue in the study until age 4 and 15 kg (US and Puerto Rico) or for up to 1 additional year after reaching age 4 and 15 kg (EU). Visits beyond Week 24 occurred every 12 weeks for those subjects who continued in the study.

Reporting group values	Adalimumab	Total

Primary: Number of Subjects with Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Subjects with Treatment-Emergent Adverse Events (TEAEs) ^[1]
End point description:	
An adverse event (AE) is defined as any untoward medical occurrence in a patient or clinical investigation participant administered a pharmaceutical product and which does not necessarily have a causal relationship with this treatment. If an AE meets any of the following criteria, it is considered a serious adverse event (SAE): Results in death, is life-threatening, results in hospitalization or the prolongation of hospitalization, is a congenital anomaly or a persistent or significant disability/incapacity, or is an important medical event requiring medical or surgical intervention to prevent a serious outcome. A treatment-emergent AE (TEAE) is defined as any AE with onset or worsening reported by a subject from the time that the first dose of adalimumab is administered until 5 half-lives (70 days) have elapsed following discontinuation of adalimumab administration (total of 32.5 months).	
End point type	Primary
End point timeframe:	
TEAEs were collected from first dose of study drug until 70 days after the last dose of study drug and before start of commercial adalimumab or other biologics (32.5 months).	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Descriptive data were summarized for this endpoint per protocol.

Secondary: Disability Index of Child Health Assessment Questionnaire (DICHAQ): Mean Change from Baseline to Each Visit

End point title	Disability Index of Child Health Assessment Questionnaire (DICHAQ): Mean Change from Baseline to Each Visit
-----------------	---

End point description:

The DICHAQ is a self-reported subject-oriented outcome measure, calculated as the mean of the following 8 category scores (range: 0 to 3): Dressing and Grooming, Arising, Eating, Walking, Hygiene, Reach, Grip, and Activities. The score of each category is calculated as the maximum of the scores for the questions within that category. If aids and devices and/or help from another person are used for a category, a lower category score is adjusted to 2 for that category. A subject must have scores for at least 6 categories in order to compute the DICHAQ score. Total score is derived as average of all categories: 0 (no disability) to 3 (complete disability). Baseline is the last value prior to the first dose of study drug. Baseline is defined as the last nonmissing value prior to the first dose of study drug. Subjects with nonmissing Baseline and at least 1 postbaseline observation are included in the analysis. n=subjects with a nonmissing value at baseline and each visit.

Secondary: Limitation of Passive Motion (LOM69) Joint Count: Mean Change from Baseline to Each Visit

End point title	Limitation of Passive Motion (LOM69) Joint Count: Mean Change from Baseline to Each Visit
-----------------	---

End point description:

Sixty-nine joints were assessed by physical examination. The joints to be examined for LOM were the same as those examined for tenderness, except that the sacroiliac, sternoclavicular, and acromio clavicular joints were excluded. LOM of the joint was classified as present ("1"), absent ("0"), or replaced/injected ("9"). Scores range from 0 to 621, with higher scores representing higher disease activity. Baseline is defined as the last nonmissing value prior to the first dose of study drug. Subjects with nonmissing Baseline and at least 1 postbaseline observation are included in the analysis. n=subjects with a nonmissing value at baseline and each visit.

End point type	Secondary

End point title	Child's Health Questionnaire Parent Form (CHQ-PF50) Self Esteem Category: Mean Change from Baseline to Each Visit
-----------------	---

End point description:

The CHQ-PF50 is a subject-reported outcome measure that includes 50 questions related to physical and mental health, social limitations, and impact on parents and family. Scores for each category were converted to a scale from 0 (implies higher disease activity) to 100 (implies lower disease activity). Baseline is defined as the last nonmissing value prior to the first dose of study drug. Subjects with nonmissing Baseline and at least 1 postbaseline observation are included in the analysis. n=subjects with a nonmissing value at baseline and each visit.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

TEAEs were collected from first dose of study drug until 70 days after the last dose of study drug and before start of commercial adalimumab or other biologics (32.5 months); SAEs were collected from the time informed consent was obtained (33.5 months)

Adverse event reporting additional description:

A treatment-emergent AE (TEAE) is defined as any AE with onset or worsening reported by a subject from the time that the first dose of adalimumab is administered until 5 half-lives (70 days) have elapsed following discontinuation of adalimumab administration. TEAEs were collected whether elicited or spontaneously reported by the subject.

Assessment type	Systematic

Dictionary used

Dictionary name	MedDRA
Dictionary version	15.1

Reporting groups

Reporting group title	Adalimumab
-----------------------	------------

Reporting group description:

Adalimumab 24 mg/m² body surface area (BSA) up to a total dose of 20 mg administered every other week (eow) by parent or designee as a single dose via subcutaneous injection at approximately the same time of day, for a minimum of 24 weeks. Subjects could continue in the study until age 4 and 15 kg (US and Puerto Rico) or for up to 1 additional year after reaching age 4 and 15 kg (EU). Visits beyond Week 24 occurred every 12 weeks for those subjects who continued in the study.

Serious adverse events	Adalimumab		
Total subjects affected by serious adverse events			
subjects affected / exposed	5 / 32 (15.63%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events			
Gastrointestinal disorders

occurrences (all)	11		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 August 2008	To add study visits to gather additional safety data and to shorten the intervals between visits, and change study duration from based on age (10 years) to based on age and weight.
08 January 2009	To clarify and update study procedures; include BSA dosing and dosing diaries; and update criteria for JIA diagnosis to include International League of Associations for Rheumatology (ILAR) classification.
06 July 2009	To extend the study population to include children in the EU who meet the study criteria; update the classification of JIA to add back in 'moderately to severely' in the description and to include polyarticular course JIA; revise inclusion exclusion criteria for safety reasons (eg, normal cardiopulmonary and neurological exams, parent/legal guardian responsible for storage and handling of study drug, procedures following positive purified protein derivative [PPD] test, and exclusionary concomitant medications); update conditions in which a subject should be withdrawn; and include (EU) and update (US) injection instructions for adalimumab.
29 October 2009	To extend the study for subjects in the EU who have reached 4 years of age and weight ≥ 15 kg for up to 1 additional year to allow time for transition to an appropriate treatment.
23 August 2010	To add anti-adalimumab antibody (AAA) assay; clarify that subjects beginning commercial adalimumab immediately after the trial will not be required to have a 70-day follow-up call; expand anti-nuclear antibody (ANA)/double-stranded DNA (dsDNA) test to include US subjects; and include previous Disease-Modifying Anti-Rheumatic Drug (DMARD) failure as part of inclusion criteria for subjects in the EU.
01 May 2012	To include annual tuberculosis tests.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
