

## Clinical trial results:

### A Randomized, Double-Blind, Placebo Controlled, Cross-over Study of the Effectiveness of Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for the Treatment of Multifocal Motor Neuropathy

#### Summary

EudraCT number	2009-013841-27
Trial protocol	DK
Global end of trial date	11 August 2011

#### Results information

Result version number	v1 (current)
This version publication date	05 March 2016
First version publication date	05 March 2016

#### Trial information

##### Trial identification

Sponsor protocol code	160604
-----------------------	--------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT00666263
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 August 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	11 August 2011
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The aim of the current study was to evaluate the efficacy (effect on grip strength and disability) and safety/tolerability of Immune Globulin Intravenous (Human), 10% (IGIV, 10%) in subjects with Multifocal Motor Neuropathy (MMN).

Protection of trial subjects:

This study was conducted in accordance with this protocol, the International Conference on Harmonization (ICH) Guideline for Good Clinical Practice, Title 21 of the US Code of Federal Regulations and the European Directive.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	22 August 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 14
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	United States: 28
Worldwide total number of subjects	44
EEA total number of subjects	2

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	39
From 65 to 84 years	5
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Recruitment was conducted in the U.S., Canada, and Europe at 17 study sites. The first subject was enrolled in August 2008.

### Pre-assignment

Screening details:

Fifty unique potential subjects were enrolled (signed informed consent) at clinical study sites in North America and Europe. Six were screen failures. Therefore, 44 subjects were randomized and treated.

### Pre-assignment period milestones

Number of subjects started	50 <sup>[1]</sup>
Number of subjects completed	44

### Pre-assignment subject non-completion reasons

Reason: Number of subjects	Screen Failure: 6
----------------------------	-------------------

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number of subjects enrolled only included subjects treated with study product (N=44) as per definition of enrolled in EudraCT (Enrolled=Treated). The number of subjects reported in the pre-assignment period includes all subjects enrolled in the study i.e. signed informed consent (N=50).

### Period 1

Period 1 title	Study Part 1 (Stabilization Phase 1)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Each of the following 5 study parts was 12 weeks. 1: Open-label phase of treatment/stabilization with IGIV, 10% (Stabilization Phase 1); 2: IGIV, 10% or placebo (double-blind treatment cross-over period 1); 3: Open-label treatment/stabilization with IGIV, 10% (Stabilization Phase 2); 4: IGIV, 10% or placebo (double-blind treatment cross-over period 2); 5: Open-label phase of treatment/stabilization with IGIV, 10% (Stabilization Phase 3). Placebo was 0.25% human albumin.

### Arms

Are arms mutually exclusive?	Yes
Arm title	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)

Arm description:

Study Part 1: Open-label phase of treatment/stabilization on Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks (Stabilization Phase 1).

Includes all subjects who received IGIV, 10% during Study Part 2 (double-blind treatment cross-over Period 1) and Placebo during Study Part 4 (double-blind treatment cross-over Period 2).

Arm type	Experimental
Investigational medicinal product name	IGIV, 10%
Investigational medicinal product code	
Other name	GAMMARGARD LIQUID (US, Canada), KIOVIG (EU)
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Immune globulin intravenous (Human), 10% (IGIV, 10%) solution consists of 1 vial of a liquid solution containing 100 mg/mL protein, of which at least 98% is Immunoglobulin (IgG). Subjects were dosed intravenously at increasing rates of infusion starting at 0.5 mL/kg body weight/hour (BM/h) and

increasing to a maximum rate of 5.0 mL/kg BW/h. Alternatively Institutional Standardized Infusion Rate Protocols may be used. Rate of infusion could be adjusted at the investigator's discretion.

<b>Arm title</b>	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Arm description:	
Study Part 1: Open-label phase of treatment/stabilization on Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks (Stabilization Phase 1).	
Includes all subjects who received Placebo during Study Part 2 (double-blind treatment cross-over Period 1) and IGIV, 10% during Study Part 4 (double-blind treatment cross-over Period 2).	
Arm type	Experimental
Investigational medicinal product name	IGIV, 10%
Investigational medicinal product code	
Other name	GAMMARGARD LIQUID (US, Canada), KIOVIG (EU)
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

**Dosage and administration details:**

Immune globulin intravenous (Human), 10% (IGIV, 10%) solution consists of 1 vial of a liquid solution containing 100 mg/mL protein, of which at least 98% is Immunoglobulin (IgG). Subjects were dosed intravenously at increasing rates of infusion starting at 0.5 mL/kg body weight/hour (BM/h) and increasing to a maximum rate of 5.0 mL/kg BW/h. Alternatively Institutional Standardized Infusion Rate Protocols may be used. Rate of infusion could be adjusted at the investigator's discretion.

<b>Number of subjects in period 1</b>	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Started	22	22
Completed	22	21
Not completed	0	1
Adverse event, non-fatal	-	1

**Period 2**

Period 2 title	Study Part 2 (Cross-over Period 1)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Subject

**Blinding implementation details:**

Each of the following 5 study parts was 12 weeks. 1: Open-label phase of treatment/stabilization with IGIV, 10% (Stabilization Phase 1); 2: IGIV, 10% or placebo (double-blind treatment cross-over period 1); 3: Open-label treatment/stabilization with IGIV, 10% (Stabilization Phase 2); 4: IGIV, 10% or placebo (double-blind treatment cross-over period 2); 5: Open-label phase of treatment/stabilization with IGIV, 10% (Stabilization Phase 3). Placebo was 0.25% human albumin.

## Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)
------------------	---

### Arm description:

Study Part 2: double-blind treatment cross-over period 1 for 12 weeks.

Includes all subjects who received Immune Globulin Intravenous (Human), 10% (IGIV, 10%) during this study period.

Arm type	Experimental
Investigational medicinal product name	IGIV, 10%
Investigational medicinal product code	
Other name	GAMMARGARD LIQUID (US, Canada), KIOVIG (EU)
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

### Dosage and administration details:

Immune globulin intravenous (Human), 10% (IGIV, 10%) solution consists of 1 vial of a liquid solution containing 100 mg/mL protein, of which at least 98% is Immunoglobulin (IgG). Subjects were dosed intravenously at increasing rates of infusion starting at 0.5 mL/kg body weight/hour (BM/h) and increasing to a maximum rate of 5.0 mL/kg BW/h. Alternatively Institutional Standardized Infusion Rate Protocols may be used. Rate of infusion could be adjusted at the investigator's discretion.

Investigational medicinal product name	Placebo - 0.25% Albumin (Human) Solution
Investigational medicinal product code	
Other name	BUMINATE or Human Albumin 200 g/L Baxter Solution for Infusion
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

### Dosage and administration details:

0.25% human albumin: BUMINATE 25% Albumin (Human)(Baxter Healthcare Corporation) used where licensed; otherwise Human Albumin 200 g/L Baxter Solution for Infusion was used. Placebo administered at the same volume as IGIV, 10% that the subject received before being randomized.

<b>Arm title</b>	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
------------------	---

### Arm description:

Study Part 2: double-blind treatment cross-over period 1 for 12 weeks.

Includes all subjects who received Placebo during this study period.

Arm type	Experimental
Investigational medicinal product name	Placebo - 0.25% Albumin (Human) Solution
Investigational medicinal product code	
Other name	BUMINATE or Human Albumin 200 g/L Baxter Solution for Infusion
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

### Dosage and administration details:

0.25% human albumin: BUMINATE 25% Albumin (Human)(Baxter Healthcare Corporation) used where licensed; otherwise Human Albumin 200 g/L Baxter Solution for Infusion was used. Placebo administered at the same volume as IGIV, 10% that the subject received before being randomized.

Investigational medicinal product name	IGIV, 10%
Investigational medicinal product code	
Other name	GAMMARGARD LIQUID (US, Canada), KIOVIG (EU)
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

### Dosage and administration details:

Immune globulin intravenous (Human), 10% (IGIV, 10%) solution consists of 1 vial of a liquid solution containing 100 mg/mL protein, of which at least 98% is Immunoglobulin (IgG). Subjects were dosed intravenously at increasing rates of infusion starting at 0.5 mL/kg body weight/hour (BM/h) and increasing to a maximum rate of 5.0 mL/kg BW/h. Alternatively Institutional Standardized Infusion Rate Protocols may be used. Rate of infusion could be adjusted at the investigator's discretion.

<b>Number of subjects in period 2</b>	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Started	22	21
Completed	22	21

### Period 3

Period 3 title	Study Part 3 (Stabilization Phase 2)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Each of the following 5 study parts was 12 weeks. 1: Open-label phase of treatment/stabilization with IGIV, 10% (Stabilization Phase 1); 2: IGIV, 10% or placebo (double-blind treatment cross-over period 1); 3: Open-label treatment/stabilization with IGIV, 10% (Stabilization Phase 2); 4: IGIV, 10% or placebo (double-blind treatment cross-over period 2); 5: Open-label phase of treatment/stabilization with IGIV, 10% (Stabilization Phase 3). Placebo was 0.25% human albumin.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)

Arm description:

Study Part 3: Stabilization Phase 2. Between the two double-blind treatment cross-over periods, subjects received open-label treatment/stabilization with Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks.

Includes all subjects who received IGIV, 10% during Study Part 2 (double-blind treatment cross-over Period 1) and Placebo during Study Part 4 (double-blind treatment cross-over Period 2).

Arm type	Experimental
Investigational medicinal product name	IGIV, 10%
Investigational medicinal product code	
Other name	GAMMARGARD LIQUID (US, Canada), KIOVIG (EU)
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Immune globulin intravenous (Human), 10% (IGIV, 10%) solution consists of 1 vial of a liquid solution containing 100 mg/mL protein, of which at least 98% is Immunoglobulin (IgG). Investigational medicinal product name	IGIV, 10%
Investigational medicinal product code	
Other name	GAMMARGARD LIQUID (US, Canada), KIOVIG (EU)
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Immune globulin intravenous (Human), 10% (IGIV, 10%) solution consists of 1 vial of a liquid solution containing 100 mg/mL protein, of which at least 98% is Immunoglobulin (IgG). Subjects were dosed intravenously at increasing rates of infusion starting at 0.5 mL/kg body weight/hour (BM/h) and increasing to a maximum rate of 5.0 mL/kg BW/h. Alternatively Institutional Standardized Infusion Rate Protocols may be used. Rate of infusion could be adjusted at the investigator's discretion.

<b>Number of subjects in period 6</b>	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Started	21	22
Completed	21	22

## Baseline characteristics

### Reporting groups

Reporting group title	Study Part 1 (Stabilization Phase 1)
-----------------------	--------------------------------------

Reporting group description:

Study Part 1 (Stabilization Phase 1)
--------------------------------------

Reporting group values	Study Part 1 (Stabilization Phase 1)	Total	
Number of subjects	44	44	
Age categorical Units: Subjects			
Age continuous Units: years arithmetic mean standard deviation	51.64 ± 10.25	-	
Gender categorical Units: Subjects			
Female	12	12	
Male	32	32	

## End points

### End points reporting groups

Reporting group title	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)
Reporting group description:	
Study Part 1: Open-label phase of treatment/stabilization on Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks (Stabilization Phase 1).	
Includes all subjects who received IGIV, 10% during Study Part 2 (double-blind treatment cross-over Period 1) and Placebo during Study Part 4 (double-blind treatment cross-over Period 2).	
Reporting group title	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Reporting group description:	
Study Part 1: Open-label phase of treatment/stabilization on Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks (Stabilization Phase 1).	
Includes all subjects who received Placebo during Study Part 2 (double-blind treatment cross-over Period 1) and IGIV, 10% during Study Part 4 (double-blind treatment cross-over Period 2).	
Reporting group title	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)
Reporting group description:	
Study Part 2: double-blind treatment cross-over period 1 for 12 weeks.	
Includes all subjects who received Immune Globulin Intravenous (Human), 10% (IGIV, 10%) during this study period.	
Reporting group title	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Reporting group description:	
Study Part 2: double-blind treatment cross-over period 1 for 12 weeks.	
Includes all subjects who received Placebo during this study period.	
Reporting group title	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)
Reporting group description:	
Study Part 3: Stabilization Phase 2. Between the two double-blind treatment cross-over periods, subjects received open-label treatment/stabilization with Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks.	
Includes all subjects who received IGIV, 10% during Study Part 2 (double-blind treatment cross-over Period 1) and Placebo during Study Part 4 (double-blind treatment cross-over Period 2).	
Reporting group title	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Reporting group description:	
Study Part 3: Stabilization Phase 2. Between the two double-blind treatment cross-over periods, subjects received open-label treatment/stabilization with Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks.	
Includes all subjects who received Placebo during Study Part 2 (double-blind treatment cross-over Period 1) and IGIV, 10% during Study Part 4 (double-blind treatment cross-over Period 2).	
Reporting group title	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)
Reporting group description:	
Study Part 4: double-blind treatment cross-over period 2 for 12 weeks.	
Includes all subjects who received Placebo during this study period.	
Reporting group title	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Reporting group description:	
Study Part 4: double-blind treatment cross-over period 2 for 12 weeks.	
Includes all subjects who received Immune Globulin Intravenous (Human), 10% (IGIV, 10%) during this study period.	
Reporting group title	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)
Reporting group description:	
Study Part 5: Subjects received open-label treatment/stabilization with Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks (Stabilization Phase 3).	
Includes all subjects who received IGIV, 10% during Study Part 2 (double-blind treatment cross-over Period 1) and Placebo during Study Part 4 (double-blind treatment cross-over Period 2).	

Reporting group title	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Reporting group description:	
Study Part 5: Subjects received open-label treatment/stabilization with Immune Globulin Intravenous (Human), 10% (IGIV, 10%) for 12 weeks (Stabilization Phase 3).	
Includes all subjects who received Placebo during Study Part 2 (double-blind treatment cross-over Period 1) and IGIV, 10% during Study Part 4 (double-blind treatment cross-over Period 2).	
Reporting group title	Arm 1: IGIV, 10% then Placebo (During Cross-Over Periods)
Reporting group description:	
End of Study Visit conducted on 21 randomized subjects regardless of participation in Study Parts (except for one subject who withdrew and did not attend End of Study Visit).	
Reporting group title	Arm 2: Placebo then IGIV, 10% (During Cross-Over Periods)
Reporting group description:	
End of Study Visit done on all 22 randomized subjects regardless of participation in Study Parts.	
Subject analysis set title	Before Stabilization 1 - All Subjects

Subjects who required a switch to open label Immune Globulin Intravenous (Human), 10% (IGIV, 10%) when receiving Placebo, but not during IGIV, 10%.

Subject analysis set title	Accelerated Switch During IGIV, 10%, But Not Placebo
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Subjects who required a switch to open label Immune Globulin Intravenous (Human), 10% (IGIV, 10%) when receiving IGIV, 10%, but not during Placebo.

Subject analysis set title	No Accelerated Switch During IGIV, 10% or Placebo
Subject analysis set type	Sub-group analysis

Subject analysis set description:

Subjects who did not require a switch to open label Immune Globulin Intravenous (Human), 10% (IGIV, 10%) when receiving IGIV, 10%, or Placebo.

### Primary: Grip Strength in the More Affected Hand

End point title	Grip Strength in the More Affected Hand <sup>[1]</sup>
-----------------	--

End point description:

The grip strength was measured using a DynEx digital dynamometer. The result of grip strength was recorded to a resolution of 0.1 kg. Each grip strength test consisted of 3 maximal repeated contractions (trials). Each subject will perform 2 sessions of grip strength testing. After a 10-minute break, the testing session will be repeated for a total of 6 grip repetitions per hand.

Population: Intent To Treat.

End point type	Primary
----------------	---------

End point timeframe:

Week 0, then at Last infusion cycle for each study part (Day 8 of last treatment cycle for 2-week interval or Day 15 of last treatment cycle for 3 or 4 -week interval), then at the end of study visit

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Per protocol, only descriptive statistics were collected for this endpoint.

## Statistical analyses

No statistical analyses for this end point

## Primary: Mean Relative Change in Grip Strength in the More Affected Hand

End point title	Mean Relative Change in Grip Strength in the More Affected Hand <sup>[2]</sup>
-----------------	--

End point description:

Relative Change is defined as  $100 * (\text{End of the Cross-Over Period} - \text{baseline of Cross-Over Period})$  divided by baseline of Cross-Over Period. The grip strength was measured using a DynEx digital dynamometer. The result of grip strength was recorded to a resolution of 0.1 kg. For statistical analysis, the mean of (usually three) trials for cross-over sessions 1 and 2 was computed and the mean of the sessions was used in the analysis as the result of the grip strength measurement. Only if no grip strength testing could be performed the results were considered as missing.

Population: Intent To Treat.

End point type	Primary
----------------	---------

End point timeframe:

Baseline and last infusion cycle during the two study cross-over periods, approximately weeks 13 and 24; and weeks 37 and 48 (i.e. baseline and end of Study Parts 2 and 4)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Currently unable to enter statistical analysis due to limitation of EudraCT. Statistics are available for these study results in ClinicalTrials.gov (NCT00666263).

**Secondary: Mean Relative Change in Time Required by Subjects to Complete the 9 Hole Peg Board Test (9-HPT) With the Non-Dominant Hand**

End point title	Mean Relative Change in Time Required by Subjects to Complete the 9 Hole Peg Board Test (9-HPT) With the Non-Dominant Hand
-----------------	--

**End point description:**

Relative Change is defined as  $100 * (\text{End of the Cross-Over Period} - \text{baseline of Cross-Over Period})$  divided by baseline of Cross-Over Period. The 9-HPT is a quantitative measure of upper extremity (arm

and hand) function. Subjects picked up the pegs one at a time (nine in total), and put them into the holes on the board as quickly as possible, in any order until all the holes were filled. Then, without pausing, subjects removed the pegs one at a time and returned them to the container as quickly as possible. Each subject did this two times with their non-dominant hand. The 9-HCT objective is to see how fast subjects could put all of the pegs in and take them out again.

Population: Intent to Treat.

## Post-hoc: Proportion of subjects with at least a 30% decline in relative grip strength in the less affected hand (measured using a DynEx digital dynamometer)

End point title	Proportion of subjects with at least a 30% decline in relative grip strength in the less affected hand (measured using a DynEx digital dynamometer)
-----------------	---

End point description:

Relative grip strength change is defined as  $100 * (\text{End of the Cross-Over Period} - \text{baseline of Cross-Over Period}) / \text{baseline of Cross-Over Period}$ . The grip strength was measured using a DynEx digital dynamometer. The result of grip strength was recorded to a resolution of 0.1 kg. For statistical analysis, the mean of (usually three) trials for cross-over sessions 1 and 2 was computed and the mean of the sessions was used in the analysis as the result of the grip strength measurement. Only if no grip strength testing could be performed the results were considered as missing.

Population: Intent to Treat.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
05 December 2008	Changes in inclusion and exclusion criteria.
05 January 2010	Rescue option for subjects who do not return to baseline after an accelerated switch described, changes in exclusion criteria, Data Monitoring Committee added, details of blinding/unblinded product added.
01 March 2011	Changes in inclusion criteria.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

None reported

---
