

Clinical trial results:

Prospective, randomized, multicenter, open label phase II study to access efficacy and safety of Lucentis monotherapy (ranibizumab 0.5 mg intravitreal injections) compared with Lucentis plus panretinal photocoagulation (PRP) and PRP (monotherapy) in the treatment of patients with high risk proliferative diabetic retinopathy.

Summary

EudraCT number	2009-014409-15

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 October 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 December 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The purpose of this trial is to evaluate safety and to compare the efficacy of intravitreal injection of ranibizumab alone (0.5 mg), versus combination of intravitreal injection of ranibizumab (0.5 mg) plus PRP, versus PRP alone in the regression of retinal neovascularization in eyes with high-risk PDR.

Protection of trial subjects:

Informed consent was obtained from each subject in writing before any study procedures. The study was described by a study coordinator and/or investigator, who answered any questions, and written information was also provided. Samples of the written information were given to each subject.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	11 November 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Portugal: 35
Worldwide total number of subjects	35
EEA total number of subjects	35

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	35
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The recruitment period was extended from November 2010 to November 2012 (2 years). Even though, only 35 patients were recruited from the 54 initially planned.

Pre-assignment

Screening details:

Type I, or Type II diabetic subjects as defined by the WHO criteria of either, and aged ≥ 18 years. HR-PDR eyes.

Best corrected Visual Acuity (BCVA) at screening $> 20/320$ (25 letters in the ETDRS Chart) in the study eye.

Clear ocular media and adequate pupillary dilatation to permit good quality fundus photography.

Intraocular pressure < 21 mmHg

Pre-assignment period milestones

Number of subjects started	35
Number of subjects completed	35

Period 1

Period 1 title	baseline (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Active Comparator: Panretinal Photocoagulation (PRP)

Arm description:

Group 1: Panretinal photocoagulation treatment (PRP) at month-0 that can be repeated after month-3.

Arm type	Comparator - Surgical Procedure
No investigational medicinal product assigned in this arm	

Arm title	Experimental: Ranibizumab
------------------	---------------------------

Arm description:

Group 2: Intravitreal injections of ranibizumab every 4 weeks at month-0, month-1 and month-2 that can be repeated after month-3.

Arm type	Experimental
Investigational medicinal product name	Ranibizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Dispersion for injection
Routes of administration	Intravitreal use

Dosage and administration details:

Intravitreal injections of ranibizumab every 4 weeks at month-0, month-1 and month-2 that can be repeated after month-3.

Arm title	Experimental: Ranibizumab + Panretinal Photocoagulation (PRP)
------------------	---------------------------------------------------------------

Arm description:

Group 3: Combination treatment of ranibizumab intravitreal injections plus PRP (2 weeks \pm 1 week after injection), at month-0, month-1 and month-2 that can be repeated after month-3.

Arm type	Combination
----------	-------------

Investigational medicinal product name	Panretinal Photocoagulation (PRP) Drug: Intravitreal injection of ranibizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use, Ocular use

Dosage and administration details:

Combination treatment of ranibizumab intravitreal injections plus PRP (2 weeks +/- 1 week after injection), at month-0, month-1 and month-2 that can be repeated after month-3.

Number of subjects in period 1	Active Comparator: Panretinal Photocoagulation (PRP)	Experimental: Ranibizumab	Experimental: Ranibizumab + Panretinal Photocoagulation (PRP)
Started	13	10	12
Completed	11	9	10

Primary: Regression of NV

End point title	Regression of NV
End point description:	
Regression of NV from screening to the 12 months visit (primary endpoint), was measured by an independent reading center in disc area (DA) units (decimal DA units), based on CFP (retinography) and FA.	
Regression of NV was defined as any decrease in the area of NV.	
End point type	Primary
End point timeframe:

Statistical analyses

Statistical analysis title	Primary Objective
Statistical analysis description:	
The hypothesis was tested using the Exact Fisher test with a statistical adjustment for multiple between-treatment comparisons (i.e., PRP vs. Ranibizumab and Ranibizumab+PRP). An alpha level of 0.05 was considered (corrected to 0.016 for the 3 groups under analysis).	
Comparison groups	Active Comparator: Panretinal Photocoagulation (PRP) v Experimental: Ranibizumab v Experimental: Ranibizumab + Panretinal Photocoagulation (PRP)
Number of subjects included in analysis	32
Analysis specification	Pre-specified
Analysis type	superiority ^[1]
P-value	= 0.075
Method	Fisher exact
Parameter estimate	proportion
Point estimate	0.6
Confidence interval	
level	90 %
sides	2-sided
lower limit	0.5
upper limit	0.7

Notes:

[1] - The primary objective of this study was to demonstrate superiority of one of the treatment groups: ranibizumab 0.5 mg monotherapy, PRP monotherapy or combination therapy (ranibizumab 0.5 mg plus PRP) over a 12-month treatment period in the following:

1. Regression of NV.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From Screening up to 24-months (12-months of study follow-up plus 12-months post-study).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The main limitations of this trial are the follow-up period and the reduced number of patients included in the study.
