Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 May 2014
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 May 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The objective of this study was to evaluate the efficacy and safety of adalimumab 40 mg administered every other week (eow) subcutaneously (SC) compared to placebo for 12 weeks followed by open label (OL) safety and efficacy assessments in subjects with non-ankylosing spondylitis (AS), non-psoriatic arthritis (PsA) active peripheral spondyloarthritis (SpA) who have had an inadequate response to ≥ 2 non-steroidal anti-inflammatory drugs (NSAIDs), or are intolerant to, or have a contraindication for, NSAIDs.

Protection of trial subjects:

All subjects entering the study had to sign an informed consent that was explained to them and questions encouraged.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 March 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 32
Country: Number of subjects enrolled	Canada: 9
Country: Number of subjects enrolled	United States: 19
Country: Number of subjects enrolled	Belgium: 21
Country: Number of subjects enrolled	Czech Republic: 35
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	France: 6
Country: Number of subjects enrolled	Germany: 26
Country: Number of subjects enrolled	Greece: 7
Country: Number of subjects enrolled	Hungary: 5
Country: Number of subjects enrolled	Ireland: 2
Worldwide total number of subjects	165
EEA total number of subjects	105

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	162
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

The study included a 30-day screening period.

Period 1

Period 1 title	Double-blind (DB) Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Carer, Subject

Blinding implementation details:

All subjects were centrally randomized using an Interactive Voice Response System/Interactive Web Response System (IVRS/IWRS). All personnel with direct oversight of the conduct and management of the trial (except the Drug Supply Management Team) investigator, study site personnel, and subject remained blinded to each subject's treatment throughout the 12-week DB period. The IVRS/IWRS provided access to blinded subject treatment information in the case of medical emergency.

Arms

Are arms mutually exclusive?	Yes
Arm title	Double-blind Placebo

Arm description:

Placebo subcutaneous (SC) injection every other week (eow) up to Week 12 in the double-blind period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Study drug was provided as a sterile SC injection solution in 1 mL pre-filled syringes containing matching placebo for adalimumab. Study drug was SC self-administered eow at approximately the same time of day.

Arm title	Double-blind Adalimumab
------------------	-------------------------

Arm description:

Adalimumab 40 mg SC injection eow up to Week 12 in double-blind period.

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira®, ABT-D2E7
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Study drug was provided as a sterile SC injection solution in 1 mL pre-filled syringes containing adalimumab 40 mg/0.8 mL. Study drug was SC self-administered eow at approximately the same time of day.

Number of subjects in period 1	Double-blind Placebo	Double-blind Adalimumab
Started	81	84
Completed	81	82
Not completed	0	2
Consent withdrawn by subject	-	1
Adverse event	-	1

Period 2

Period 2 title	Open-label (OL) Period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Double-blind Placebo / Open-label Adalimumab

Arm description:

Placebo SC injection every other week (eow) up to Week 12 in the double-blind period; adalimumab 40 mg subcutaneous injection eow from Week 12 to Week 156 in the open-label period.

Arm type	Placebo
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira®, ABT-D2E7
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Study drug was provided as a sterile SC injection solution in 1 mL pre-filled syringes containing adalimumab 40 mg/0.8 mL. Study drug was SC self-administered eow at approximately the same time of day.

Arm title	Double-blind Adalimumab / Open-label Adalimumab
------------------	---

Arm description:

Adalimumab 40 mg SC injection eow up to Week 12 in double-blind period and from Week 12 to Week 156 in open-label period.

Arm type	Experimental
Investigational medicinal product name	Adalimumab
Investigational medicinal product code	
Other name	Humira®, ABT-D2E7
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Study drug was provided as a sterile SC injection solution in 1 mL pre-filled syringes containing adalimumab 40 mg/0.8 mL. Study drug was SC self-administered eow at approximately the same time of day.

Number of subjects in period 2	Double-blind Placebo / Open-label Adalimumab	Double-blind Adalimumab / Open- label Adalimumab
Started	81	82
Completed	61	56
Not completed	20	26
Consent withdrawn by subject	6	5
Not specified	7	7
Adverse event	6	12
Lost to follow-up	1	2

Baseline characteristics

Reporting groups

Reporting group title	Double-blind Placebo
Reporting group description:	
Placebo subcutaneous (SC) injection every other week (eow) up to Week 12 in the double-blind period.	
Reporting group title	Double-blind Adalimumab
Reporting group description:	
Adalimumab 40 mg SC injection eow up to Week 12 in double-blind period.	

Reporting group values	Double-blind Placebo	Double-blind Adalimumab	Total
Number of subjects	81	84	165
Age categorical			
Units: Subjects			
< 40 years	50	35	85
40 to 65 years	29	48	77
> 65 years	2	1	3
Age continuous			
Units: years			
arithmetic mean	38.5	42.5	
standard deviation	± 12.77	± 10.79	-
Gender categorical			
Units: Subjects			
Female	42	48	90
Male	39	36	75
Tender Joint Count (78 Joints)			
Seventy-eight joints were assessed for tenderness by physical examination. Tenderness of each joint was classified as present (1) or absent (0), for a total possible score of 0 (no tenderness) to 78 (worst possible score/severe tenderness).			
Units: units on a scale			
arithmetic mean	13.62	12.95	
standard deviation	± 16.101	± 12.79	-
Swollen Joint Count (76 Joints)			
Seventy-six joints were assessed for swelling by physical examination. Swelling of each joint was classified as present (1) or absent (0), for a total possible score of 0 (no swelling) to 76 (worst possible score/severe swelling).			
Units: units on a scale			
arithmetic mean	7.31	6.12	
standard deviation	± 7.996	± 5.581	-
Maastricht Ankylosing Spondylitis Enthesitis Score (MASES)			
Assessment of enthesitis was performed in 7 domains. Each domain was graded for the presence (1) and absence (0) of tenderness yielding total MASES ranging from 0 (no tenderness) to 13 (worst possible score; severe tenderness).			
Units: units on a scale			
arithmetic mean	3.59	3.13	
standard deviation	± 3.398	± 3.603	-
Leeds Enthesitis Index			
Assessment of enthesitis was performed in 6 domains. Each domain was graded for the presence (1) and absence (0) of tenderness yielding total Leeds Enthesitis Index scores ranging from 0 (no tenderness) to 6 (worst possible score; severe tenderness).			

Units: units on a scale arithmetic mean standard deviation	1.42 ± 1.611	1.49 ± 1.661	-
Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Score			
Assessment of enthesitis was performed in 16 domains. Each domain was graded for the presence (1) and absence (0) of tenderness yielding total SPARCC scores ranging from 0 (no tenderness) to 16 (worst possible score; severe tenderness).			
Units: units on a scale arithmetic mean standard deviation	4.05 ± 3.785	3.83 ± 4.038	-
Total Enthesitis Count			
Total enthesitis count in the sum of all unique, individual entheses location included in the Leeds, SPARCC, and MASES entheses indices. Scores range from 0 (no enthesitis) to 29 (most severe enthesitis).			
Units: units on a scale arithmetic mean standard deviation	7.33 ± 6.69	6.73 ± 6.958	-
Patient Global Assessment (PTGA) of Disease Activity			
PTGA of Disease Activity as measured by a 100 mm visual analogue scale (VAS) where 0=no symptoms and 100=maximum symptoms.			
Units: mm arithmetic mean standard deviation	66.43 ± 15.864	65.24 ± 15.225	-
PTGA – Pain			
PTGA – Pain as measured by a 100 mm VAS where 0=no pain and 100=maximum pain.			
Units: units on a scale arithmetic mean standard deviation	65.6 ± 15.897	64.3 ± 14.036	-
Physician Global Assessment (PGA) of Disease Activity			
A VAS was to be used for the PGA of disease activity (current status). The left end of the VAS scale (0 mm) signifies the absence of symptoms and the right end (100 mm) signifies maximum disease activity.			
Units: units on a scale arithmetic mean standard deviation	57.02 ± 14.987	60.29 ± 15.537	-
Ankylosing Spondylitis Disease Activity Score (ASDAS)			
The ASDAS is categorized into 4 disease activity states based on score: inactive disease (< 1.3), moderate (≥ 1.3 to < 2.1), high (≥ 2.1 to ≤ 3.5), and very high (> 3.5). One subject in the Placebo arm did not have a baseline ASDAS assessment.			
Units: units on a scale arithmetic mean standard deviation	3.06 ± 0.804	2.92 ± 0.844	-
Bath Ankylosing Spondylitis Disease Activity Index (BASDAI)			
The BASDAI consisted of a VAS scale used to answer 6 questions pertaining to symptoms experienced by the subject for the past week. Each question on the BASDAI was reported in cm (0 [none] to 10 [very severe] with one question's possible answers being in time increments [0 hours to ≥ 2 hours]). The BASDAI has a maximum value of 10.			
Units: units on a scale arithmetic mean standard deviation	5.57 ± 1.587	5.68 ± 1.749	-
Dactylitis Count			
Assessment of the presence or absence of dactylitis as well as grading of tenderness and swelling in all 20 of the subjects' digits was performed. Tenderness at each site was quantified from absent to severe.			

Swelling was quantified from mild to severe. Total Dactylitis Assessment scores ranging from 0 (no dactylitis) to 20 (worst possible score; severe dactylitis). One subject in the Adalimumab arm did not have a baseline dactylitis count.			
Units: units on a scale			
arithmetic mean	0.65	0.35	
standard deviation	± 1.257	± 0.943	-
Short Form-36 Health Status Survey™ Version 2 (SF-36™V2) Physical Component Score (PCS)			
The SF-36™V2 is a 36-item generic health-related quality of life measure to assess the subject's view of their health consisting of 2 components: physical and mental. Scores range from 0 to 100. Higher scores indicate a better health state.			
Units: units on a scale			
arithmetic mean	34.48	34.56	
standard deviation	± 7.629	± 7.936	-

End point title	Change from Baseline in Health Assessment Questionnaire Modified for the Spondyloarthropathies (HAQ-S) Total at Week 12
-----------------	---

End point description:

The HAQ-S is a self-reported measure to assess the physical function and health-related quality of life. The Disability Index (DI) of HAQ-S is calculated as the mean of the following 8 category scores (range: 0 [without any difficulty] to 3 [unable to do]): Dressing and Grooming, Rising, Eating, Walking, Hygiene, Reach, Grip, and Activities. Five additional items in the functional status measure were included in the HAQ-S, including carrying heavy packages, sitting for long periods, able to work at a flat topped table, and (if the participant had a driver's license or a car) able to look in the rear view mirror and able to turn head to drive in reverse. The overall score ranges from 0 (no disability) to 3 (three very severe, high-dependency disability). Negative mean changes from Baseline in the overall score indicate improvement. LOCF: Missing value was imputed using the last non-missing post-baseline value prior to missing value.

Seventy-six joints were assessed for swelling by physical examination. Swelling of each joint was classified as present (1) or absent (0), for a total possible score SJC76 of 0 (no swelling) to 76 (worst possible score). Subjects with non-missing Baseline and at least 1 non-missing post-Baseline value were included in post-Baseline visits. LOCF: missing value was imputed using the last non-missing post-Baseline value prior to missing value.

End point type	Secondary
End point timeframe:	
Baseline (last measurement prior to first DB dose), Week 12	

End point values	Double-blind Placebo	Double-blind Adalimumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	81	84		
Units: units on a scale				
arithmetic mean (standard deviation)				
TJC78	-1.8 (± 8.41)	-5.9 (± 8.67)		
SJC76	-3.1 (± 5.64)	-3.6 (± 4.27)		

Statistical analyses

No statistical analyses for this end point

Secondary: Change from Baseline in Ankylosing Spondylitis Disease Activity Score (ASDAS) at Week 12

End point title	Change from Baseline in Ankylosing Spondylitis Disease Activity Score (ASDAS) at Week 12
-----------------	--

End point description:

The ASDAS is categorized into 4 disease activity states based on score: inactive disease (< 1.3), moderate (≥ 1.3 to < 2.1), high (≥ 2.1 to ≤ 3.5), and very high (> 3.5). Clinically important and major improvements in ASDAS are defined as a reduction from Baseline of ≥ 1.1 and ≥ 2.0 points, respectively. Subjects with non-missing Baseline and at least 1 non-missing post-Baseline value were included in post-Baseline visits. LOCF: missing value was imputed using the last non-missing post-Baseline value prior to missing value.

End point type	Secondary

Reporting groups

Reporting group title	Double-blind Placebo
-----------------------	----------------------

Reporting group description:

Placebo SC injection eow up to Week 12 in the double-blind period.

Reporting group title	Double-blind Adalimumab
-----------------------	-------------------------

Reporting group description:

Adalimumab 40 mg SC injection eow up to Week 12 in double-blind period.

Reporting group title	Any Adalimumab
-----------------------	----------------

Reporting group description:

All randomized subjects who had received at least 1 dose of adalimumab (blinded or open-label) at any time during the study (up to Week 156).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 November 2009	<ul style="list-style-type: none"> • Updated Table 1 Efficacy and Safety Measurements and Flow Chart to add high-sensitivity C-reactive protein to table for consistency within the protocol. Revised footnote "e" to increase the acceptable time frame for anteroposterior pelvic x-ray, from 90 days to 180 days. • Updated Study Procedures to increase window for prior AP pelvic x-ray from 3 months (90 days) to 6 months (180 days). • Updated Table 2 Clinical Laboratory Tests to clarify the time points of when tests were to be performed. Moved human chorionic gonadotropin to proper laboratory category. • Updated Protocol Appendix B, List of Protocol Signatories. • Corrected minor typographical errors.
10 December 2009	<ul style="list-style-type: none"> • Updated exclusion criteria to add criterion to clarify maximum dose, stability, and washout requirements for corticosteroids. • Updated exclusion criteria to add criterion to exclude subjects with diagnosis and current symptoms of fibromyalgia.
21 April 2010	<ul style="list-style-type: none"> • Updated the title page to correct European Union Sponsor address. • Updated Selection of Study Population to add "non-AS" to selection of study population for consistency. • Updated inclusion criteria to modify criterion to specify severity of disease as agreed upon with the Food and Drug Administration (FDA). • Updated exclusion criteria to revise criterion to remove age restriction for early onset arthritis. • Updated Table 1 Efficacy and Safety Measurement and Flow Chart to remove duplicate table note and corrected references within Table 1. Added Week 52 urinalysis and updated corresponding table note. • Updated Study Procedures to clarify acceptable alternative methods for the purified protein derivative skin test for tuberculosis screening and to add the local requirements for the Czech Republic. • Updated Health Outcomes Questionnaires to add tenderness and swelling assessment for dactylitis. • Updated Discussion of Study Design and Choice of Control Groups to add the words "non-AS" and "active" to clarify subject population. • Updated Suitability of Subject Population to add "non-AS" to selection of study population for consistency. • Added applicable reference to Protocol Appendix I. PGA of Disease Activity: VAS. • Revised Protocol Appendix Q. Subject Dosing Sheets – Adalimumab and instruction text as per updated standard protocol text. • Added Protocol Appendix V. Dactylitis Assessment to include clarification on how to capture presence of swelling and tenderness for dactylitis. • Updated Table 2 Clinical Laboratory Tests to add leukocytes and nitrites to remain consistent with the text.
22 November 2010	<ul style="list-style-type: none"> • Updated Study Procedures to add text to footnote on Table 2. Clinical Laboratory Tests regarding an additional confirmatory human leukocyte antigen-B27 test if the initial test result was reported as equivocal.
22 March 2012	<ul style="list-style-type: none"> • Extended the study for 1 additional year (from 104 to 156 weeks). • Updated Overall Study Design and Plan as well as the Table 1 Study Activities table to reflect 144 weeks of open-label treatment. • Updated Table 1 Study Activities for TB testing to include acceptability of QuantiFERON-TB Gold test and yearly testing of subjects that were PPD negative at Screening. • Editorial edits to comply with the current protocol template and Humira standards.

27 June 2013	<ul style="list-style-type: none"> • Update sections of the protocol to incorporate AbbVie's participation in an FDA-requested tumor necrosis factor (TNF) inhibitor class wide exploration of the rare appearance of malignancy in patients who are 30 years of age or younger at the time of diagnosis. • Incorporate Administrative Change 2 into this protocol to update the Sponsor Name Change throughout the document. • Editorial changes to reflect the current protocol template and safety standards.
