

Clinical trial results:

A Randomized, Double-Blind, Placebo-Controlled, Cross-Over, Multi-Center Study of Eculizumab in Patients with Generalized Myasthenia Gravis (gMG) Who Have Moderate to Severe Muscle Weakness Despite Treatment with Immunosuppressants.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 March 2011
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 March 2011
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The purpose of this study is to determine whether eculizumab is safe and effective in the treatment of patients with generalized myasthenia gravis despite treatment with various immunosuppressants, such as prednisone, methotrexate, Cellcept, cyclosporine, and cyclophosphamide, that are currently available.

Protection of trial subjects:

Patients must have been vaccinated for N meningitides 14 days prior to randomization at Visit 1 or during the observation period, as determined by the principal investigator's discretion.

Background therapy:

Patients may continue on their MG medications, IST and/or cholinesterase inhibitor but must be on a stable dose prior and during the study.

Evidence for comparator:

This was a Randomized, Double-Blind, Placebo-Controlled, Cross-Over, Multi-Center Study of Eculizumab in Patients with Generalized Myasthenia Gravis (gMG) who have Moderate to Severe Muscle Weakness Despite Treatment with Immunosuppressants. All patients received the treatment.

Actual start date of recruitment	01 October 2008
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 13
Country: Number of subjects enrolled	United Kingdom: 1
Worldwide total number of subjects	14
EEA total number of subjects	1

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	11
From 65 to 84 years	3
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Patients received standard of care during the Screening Period. Patients were randomized to a treatment sequence to receive eculizumab in Period 1 followed by placebo in Period 2 or placebo in Period 1 followed by eculizumab in Period 2. Patients were permitted to continue on background immunosuppressive therapy throughout the study.

Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer, Assessor

Blinding implementation details:

Patients were centrally randomized via Almac Clinical Service's secure web-based randomization application, WebEZ. The randomization code was maintained by Almac Clinical Services.

Arms

Are arms mutually exclusive?	Yes
Arm title	Eculizumab period 1

Arm description:

Patients received eculizumab 600 mg via IV infusion over approximately 35 minutes once a week (every 7 ± 2 days) for 4 weeks followed by 900 mg eculizumab via IV infusion over approximately 35 minutes every two weeks (every 14 ± 2 days) for 7 doses.

Arm type	Experimental
Investigational medicinal product name	eculizumab
Investigational medicinal product code	
Other name	soliris
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1 dose of 600mg weekly for 4 weeks, 900 mg for the fifth week. And 900 mg every two weeks for 6 doses

Arm title	Placebo period 1
------------------	------------------

Arm description:

Patients received placebo via IV infusion... more over approximately 35 minutes once a week (every 7 ± 2 days) for 4 weeks followed by matching placebo via IV infusion over approximately 35 minutes every two weeks (every 14 ± 2 days) for 7 doses.

Arm type	Placebo
Investigational medicinal product name	Matching placebo
Investigational medicinal product code	placebo
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1 dose weekly for 4 weeks than 1 dose for the fifth week and 1 doses every two weeks for 6 doses

Number of subjects in period 1	Eculizumab period 1	Placebo period 1
Started	7	7
Completed	7	7

Period 2

Period 2 title	Treatment Period 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Eculizumab period 2

Arm description:

All these patients received placebo during period 1

During Period 2:

Patients received ecuzumab 600 mg via IV infusion over approximately 35 minutes once a week (every 7 ± 2 days) for 4 weeks followed by 900 mg ecuzumab via IV infusion over approximately 35 minutes every two weeks (every 14 ± 2 days) for 7 doses.

Arm type	Experimental
Investigational medicinal product name	eculizumab
Investigational medicinal product code	
Other name	soliris
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1 dose of 600mg weekly for 4 weeks, 900 mg for the fifth week. And 900 mg every two week for 6 doses

Arm title	Placebo period 2
------------------	------------------

Arm description:

All these patients received ecuzumab during period 1

During period 2:

Patients received placebo via IV infusion... more over approximately 35 minutes once a week (every 7 ± 2 days) for 4 weeks followed by matching placebo via IV infusion over approximately 35 minutes every two weeks (every 14 ± 2 days) for 7 doses.

Arm type	Placebo
----------	---------

Investigational medicinal product name	Matching placebo
Investigational medicinal product code	placebo
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

1 dose weekly for 4 weeks than 1 dose for the fifth week and 1 doses every two weeks for 6 doses

Number of subjects in period 2^[1]	Ecuzumab period 2	Placebo period 2
Started	6	6
Completed	6	5
Not completed	0	1
Lack of efficacy	-	1

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 1 patient discontinued during the placebo sequence of treatment due to lack of efficacy

Secondary: Change From Baseline in the MG-Activity of Daily Living Profile (MG-ADL)

End point title	Change From Baseline in the MG-Activity of Daily Living Profile (MG-ADL)
-----------------	--

End point description:

The MG-ADL is an 8-point questionnaire that focuses on relevant symptoms and functional performance of activities of daily living (ADL) in MG patients. The 8 items of the MG-ADL were derived from symptom-based components of the original 13-item QMG to assess disability secondary to ocular (2 items), bulbar (3 items), respiratory (1 item), and gross motor or limb (2 items) impairment related to effects from MG. In this functional status instrument, each response is graded 0 (normal) to 3 (most severe). The range of total MG-ADL score is 0 – 24. MG-ADL was to be performed at every study visit. The recall period for MG-ADL was since the preceding study visit (1 or 2 weeks).

Secondary: Change From Baseline in the QoL Instrument, SF-36.

End point title	Change From Baseline in the QoL Instrument, SF-36.
End point description:	
The SF-36 is a multi-purpose, short-form health survey with 36 questions. It yields an 8-scale profile of functional health and well-being scores (physical functioning, role-physical, bodily pain, general health, mental health, role-emotional, social functioning and vitality) as well as psychometrically-based physical and mental health summary measures. It is a generic measure, as opposed to one that targets a specific age, disease or treatment group. The lower the score the more disability; the higher the score the less disability. Norm-based scoring involving a linear T-score transformation method was used so that scores for each of the health domain scales and component summary measures have a mean of 50 and a standard deviation of 10 based on the 1998 US general population. Thus, scores above and below 50 are above and below the average, respectively, in the 1998 US general.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

46 weeks (Screening Period [up to 4 weeks], Treatment Period 1 [16 weeks], Washout Period [5 weeks], Treatment Period 2 [16 weeks], Follow-up Period [5 weeks]) for adverse events (AEs); 42 weeks for treatment emergent AEs (TEAEs).

Adverse event reporting additional description:

TEAEs were collected at every visit and follow-up

Assessment type	Systematic

Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Placebo

Placebo: Placebo IV weekly for 4 doses then every two weeks for 7 doses

Events that occurred during the Washout Period were attributed to treatment assignment during Treatment Period 1.

Reporting group title	Eculizumab
-----------------------	------------

Reporting group description:

Eculizumab

Eculizumab: eculizumab 600 mg IV weekly for 4 doses followed by eculizumab 900 mg IV every two weeks for 7 doses

Events that occurred during the Washout Period were attributed to treatment assignment during Treatment Period 1.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
31 March 2009	Amendment 2 (US only) To address the recruitment concerns, this amendment will remove the inclusion criterion #3 "Duration of MG symptoms less than or equal to 10 years" and modify exclusion criterion #3 to specify a patient with MG status that, in the opinion of the Investigator, has reached a "burned out" stage will be excluded. This change will allow the recruitment of patients who have a likelihood of response to therapy based on their disease severity and MG treatment history.
07 May 2009	Amendment 2 (Canada Only) To address the recruitment concerns, this amendment will remove the inclusion criterion #3 "Duration ofMG symptoms less than or equal to 10 years" and modify exclusion criterion #3 to specify a patient with MG status that, in the opinion of the Investigator, has reached a "burned out" stage will be excluded. This change will allow the recruitment of patients who have a likelihood of response to therapy based on their disease severity and MG treatment history.
17 November 2009	Amendment 4 (UK Only) The purpose of this Amendment is to specify that women of childbearing potential must use adequate contraception methods during the study and for 5 months after treatment.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Small sample size limited ability to detect intercohort differences. Carryover effect from Treatment Period (TP) 1 warrants cautious interpretation of TP 2 data.

Study terminated early; 13 patients received eculizumab or placebo in TP2.

Notes:
