

## Clinical trial results:

### A Randomized, Multicenter, Double-Blind, Active-Controlled, Flexible-Dose, Parallel-Group Study of the Efficacy and Safety of Extended Release Paliperidone for the Treatment of Symptoms of Schizophrenia in Adolescent Subjects, 12 to 17 Years of Age

#### Summary

EudraCT number	2009-014811-11
Trial protocol	ES CZ SK Outside EU/EEA
Global end of trial date	11 June 2012

#### Results information

Result version number	v1
This version publication date	06 July 2016
First version publication date	05 February 2015

#### Trial information

##### Trial identification

Sponsor protocol code	R076477PSZ3003
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT01009047
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Janssen-Cilag International NV
Sponsor organisation address	Antwerpseweg 15-17, B-2340 Beerse , Belgium,
Public contact	Clinical Registry Group, Janssen-Cilag International NV, +1 609-730-2436, ClinicalTrialsEU@its.jnj.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000014-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 June 2012
Is this the analysis of the primary completion data?	Yes
Primary completion date	11 June 2012
Global end of trial reached?	Yes
Global end of trial date	11 June 2012
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

Evaluate the efficacy of paliperidone PR relative to aripiprazole in the treatment of symptoms of schizophrenia in adolescent subjects (aged 12 to 17 years of age, inclusive) at the Week 8 endpoint as measured by the change from baseline in the Positive and Negative Syndrome Scale for Schizophrenia (PANSS) total score.

Protection of trial subjects:

The safety assessments included laboratory measurements (for example, chemistry, hematology, urinalysis, lipid panel, and insulin related tests), body weight, waist circumference, electrocardiograms (ECGs), and physical examination. The Abnormal Involuntary Movement Scale (AIMS), Barnes Akathisia Rating Scale (BARS), and Simpson Angus Rating Scale (SARS) were used to assess extrapyramidal symptoms (EPS) and dyskinesia. The Columbia Suicide Severity Rating Scale (C-SSRS) was administered to assess suicidality. Adverse events and vital signs were monitored throughout the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 November 2009
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	India: 39
Country: Number of subjects enrolled	Romania: 9
Country: Number of subjects enrolled	Russian Federation: 114
Country: Number of subjects enrolled	Slovakia: 1
Country: Number of subjects enrolled	Ukraine: 37
Country: Number of subjects enrolled	United States: 22
Country: Number of subjects enrolled	Spain: 5
Worldwide total number of subjects	227
EEA total number of subjects	15

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	227
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 228 subjects were included in the all randomized analysis set, 227 included in the safety analysis set and 226 in the intent-to-treat analysis set.

### Pre-assignment

Screening details:

A total of 41 sites in 7 countries participated in this study including 6 sites in India, 1 site in Romania, 16 sites in Russian Federation, 1 site in Slovakia, 3 sites in Spain, 8 sites in Ukraine, and 6 sites in the United States.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

To maintain the blind, study drug was packaged in blister cards which contained over encapsulated tablets.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Paliperidone ER

Arm description:

Paliperidone extended release (ER) was administered as oral capsule at a dose of 6 milligram (mg) for 1 week and then was administered at a dose of either 3, 6 or 9 mg up to Week 26, once daily in the morning.

Arm type	Experimental
Investigational medicinal product name	Paliperidone ER
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Paliperidone ER was administered as oral capsule at a dose of 6 milligram (mg) for 1 week and then was administered at a dose of either 3, 6 or 9 mg up to Week 26, once daily in the morning.

<b>Arm title</b>	Aripiprazole
------------------	--------------

Arm description:

Aripiprazole was administered as oral capsule at a dose of 2 mg on Days 1 and 2, 5 mg on Days 3 and 4, 10 mg on Days 5, 6 and 7; and then was administered at a dose of either 5 or 10 or 15 mg up to Week 26, once daily in the morning.

Arm type	Experimental
Investigational medicinal product name	Aripiprazole
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, soft
Routes of administration	Oral use

Dosage and administration details:

Aripiprazole was administered as oral capsule at a dose of 2 mg on Days 1 and 2, 5 mg on Days 3 and 4, 10 mg on Days 5, 6 and 7; and then was administered as a dose of either 5 or 10 or 15 mg up to Week 26, once daily in the morning.

<b>Number of subjects in period 1</b>	Paliperidone ER	Aripiprazole
Started	113	114
Completed	85	89
Not completed	28	25
Lost To Follow-Up	-	2
Adverse Event	5	-
Other	3	1
Lack Of Efficacy	4	11
Withdrawal Of Consent	16	11

## Baseline characteristics

### Reporting groups

Reporting group title	Paliperidone ER
-----------------------	-----------------

Reporting group description:

Paliperidone extended release (ER) was administered as oral capsule at a dose of 6 milligram (mg) for 1 week and then was administered at a dose of either 3, 6 or 9 mg up to Week 26, once daily in the morning.

Reporting group title	Aripiprazole
-----------------------	--------------

Reporting group description:

Aripiprazole was administered as oral capsule at a dose of 2 mg on Days 1 and 2, 5 mg on Days 3 and 4, 10 on mg Days 5, 6 and 7; and then was administered at a dose of either 5 or 10 or 15 mg up to Week 26, once daily in the morning.

Reporting group values	Paliperidone ER	Aripiprazole	Total
Number of subjects	113	114	227
Title for AgeCategorical Units: subjects			
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	113	114	227
Title for AgeContinuous Units: years			
arithmetic mean	15.3	15.4	
standard deviation	± 1.47	± 1.45	-
Title for Gender Units: subjects			
Female	39	38	77
Male	74	76	150

## End points

### End points reporting groups

Reporting group title	Paliperidone ER
Reporting group description: Paliperidone extended release (ER) was administered as oral capsule at a dose of 6 milligram (mg) for 1 week and then was administered at a dose of either 3, 6 or 9 mg up to Week 26, once daily in the morning.	
Reporting group title	Aripiprazole
Reporting group description: Aripiprazole was administered as oral capsule at a dose of 2 mg on Days 1 and 2, 5 mg on Days 3 and 4, 10 on mg Days 5, 6 and 7; and then was administered at a dose of either 5 or 10 or 15 mg up to Week 26, once daily in the morning.	

### Primary: Change From Baseline in the Positive and Negative Syndrome Scale (PANSS) Total Score at Day 56

End point title	Change From Baseline in the Positive and Negative Syndrome Scale (PANSS) Total Score at Day 56
End point description: The PANSS is a 30-item scale with each item rated on a scale of 1 (absent) to 7 (extreme psychopathology), designed to assess various symptoms of schizophrenia including delusions, grandiosity, blunted affect, poor attention, and poor impulse control. The PANSS total score consists of the sum of all 30 PANSS items and ranges from 30 to 210. Higher scores indicate worsening. The intent-to-treat (ITT) population was used as analysis set which included all randomly assigned participants who received at least 1 dose of double-blind study drug, had both a Baseline measurement and at least 1 Post-Baseline measurement in the double-blind phase. Last observation carried forward (LOCF) method was used.	
End point type	Primary
End point timeframe: Baseline and Day 56	

End point values	Paliperidone ER	Aripiprazole		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	112	114		
Units: units on a scale				
arithmetic mean (standard deviation)				
Baseline	89.6 (± 12.22)	92 (± 12.09)		
Day 56	-19.3 (± 13.8)	-19.8 (± 14.56)		

### Statistical analyses

Statistical analysis title	Statistical Analysis 1
Statistical analysis description: Analysis of covariance (ANCOVA) model with treatment (paliperidone ER, aripiprazole) and country as factors, and baseline value as a covariate was used.	
Comparison groups	Paliperidone ER v Aripiprazole

Number of subjects included in analysis	226
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.935
Method	ANCOVA
Parameter estimate	L S mean difference
Point estimate	0.1
Confidence interval	
level	95 %
sides	2-sided
lower limit	-3.46
upper limit	3.76
Variability estimate	Standard error of the mean
Dispersion value	1.83

### Secondary: Change From Baseline in PANSS Total Score at Day 182

End point title	Change From Baseline in PANSS Total Score at Day 182
End point description:	
The PANSS is a 30-item scale designed to assess various symptoms of schizophrenia including delusions, grandiosity, blunted affect, poor attention, and poor impulse control. The 30 symptoms are rated on a 7-point scale that ranges from 1 (absent) to 7 (extreme psychopathology). The PANSS total score consists of the sum of all 30 PANSS items and ranges from 30 to 210. Higher scores indicate worsening. The ITT population included all randomly assigned participants who received at least 1 dose of double-blind study drug, had both a Baseline measurement and at least 1 Post-Baseline measurement in the double-blind phase. Last observation carried forward (LOCF) method was used.	
End point type	Secondary
End point timeframe:	
Baseline and Day 182	

End point values	Paliperidone ER	Aripiprazole		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	112	114		
Units: units on a scale				
arithmetic mean (standard deviation)				
Baseline	89.6 (± 12.22)	92 (± 12.09)		
Change at Day 182	-25.6 (± 16.88)	-26.8 (± 18.82)

lower limit	-4.68
upper limit	4
Variability estimate	Standard error of the mean
Dispersion value	2.2

### Secondary: Change From Baseline in Marder Factor Negative Symptoms Score at Day 56 and 182

End point title	Change From Baseline in Marder Factor Negative Symptoms Score at Day 56 and 182
End point description:	
The PANSS negative subscale based on marder factor assesses 7 negative-symptoms of schizophrenia. Negative symptoms represent a diminution or loss of normal functions. The symptoms are rated on a 7-point scale, with a range of 7 (absent) to 49 (extreme psychopathology). The ITT population included all randomly assigned participants who received at least 1 dose of double-blind study drug, had both a Baseline measurement and at least 1 Post-Baseline measurement in the double-blind phase. Last observation carried forward (LOCF) method was used.	
End point type	Secondary
End point timeframe:

P-value	= 0.914
Method	ANCOVA

## **Secondary: Change From Baseline in Personal and Social Performance (PSP) Scores at Day 56 and 182**

End point title	Change From Baseline in Personal and Social Performance (PSP) Scores at Day 56 and 182
-----------------	--

**End point description:**

The PSP scale assesses degree of a participants' dysfunction within 4 domains of behavior: socially useful activities, personal and social relationships, self-care, and disturbing and aggressive behavior. The results of the assessment are converted to a numerical score to rate degree of difficulty (1=absent to 6=very severe) in each of the 4 domains. Based on 4 domains there will be 1 total score (total score ranges from 1 to 100, divided into 10 equal intervals). Participants with score of 71 to 100 have mild degree of difficulty; from 31 to 70, varying degrees of disability; less than or equal to 30, functioning so poorly as to require intensive supervision.

End point type	Secondary

**Statistical analysis description:**

Change at Day 56: Analysis of covariance (ANCOVA) model with treatment groups(paliperidone ER, aripiprazole) and country as factors, and baseline value as a covariate was used

Comparison groups	Paliperidone ER v Aripiprazole
-------------------	--------------------------------

Number of subjects included in analysis	226
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.895
Method	ANCOVA
Parameter estimate	L S mean difference
Point estimate	0.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.34
upper limit	2.67
Variability estimate	Standard error of the mean
Dispersion value	1.27

<b>Statistical analysis title</b>	Statistical Analysis 2
Statistical analysis description:	
Change at Day 182: Analysis of covariance (ANCOVA) model with treatment groups (paliperidone ER, aripiprazole) and country as factors, and baseline value as a covariate was used.	
Comparison groups	Paliperidone ER v Aripiprazole
Number of subjects included in analysis	226
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.705
Method	ANCOVA
Parameter estimate	L S mean difference
Point estimate	0.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.64
upper limit	3.89
Variability estimate	Standard error of the mean
Dispersion value	1.66

<b>Secondary: Number of Participants With PANSS Response</b>	
End point title	Number of Participants With PANSS Response
End point description:	
The PANSS is a 30-item scale with each item rated on a scale of 1 (absent) to 7 (extreme psychopathology), designed to assess various symptoms of schizophrenia including delusions, grandiosity, blunted affect, poor attention, and poor impulse control. The PANSS total score consists of the sum of all 30 PANSS items and ranges from 30 to 210. Participants with PANSS response were defined as those who achieved greater than or equal to 20 percent or higher reduction from Baseline in the PANSS total score at Day 56 and 182.	
End point type	Secondary
End point timeframe:	
Day 56 and 182	

<b>End point values</b>	Paliperidone ER	Aripiprazole		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	112	114		
Units: participants				
Day 56	76	87		
Day 182	86	93		

## Statistical analyses

<b>Statistical analysis title</b>	Statistical Analysis 1
Statistical analysis description:	
Day 56: Generalized Cochran-Mantel-Haenszel test for row mean score differences was used.	
Comparison groups	Paliperidone ER v Aripiprazole
Number of subjects included in analysis	226
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.119
Method	Cochran-Mantel-Haenszel

<b>Statistical analysis title</b>	Statistical Analysis 2
Statistical analysis description:	
Day 182: Generalized Cochran-Mantel-Haenszel test for row mean score differences was used.	
Comparison groups	Paliperidone ER v Aripiprazole
Number of subjects included in analysis	226
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.444
Method	Cochran-Mantel-Haenszel

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Baseline up to Week 26

Adverse event reporting additional description:

The safety population included all randomly assigned participants who received at least 1 dose of double-blind study drug. A total of 113 participants in the paliperidone ER group and 114 participants in the aripiprazole group received at least 1 dose of double-blind study medication and were included in the safety analysis set.

Assessment type	Non-systematic
-----------------	----------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	15.0
--------------------	------

### Reporting groups

Reporting group title	Aripiprazole
-----------------------	--------------

Reporting group description:

Aripiprazole will be administered as oral capsule at a dose of 2 mg on Days 1 and 2, 5 mg on Days 3 and 4, 10 mg Days 5, 6 and 7; and then will be administered as a dose of either 5 or 10 or 15 mg up to Week 26, once daily in the morning.

Reporting group title	Paliperidone ER
-----------------------	-----------------

Reporting group description:

Paliperidone ER will be administered as oral capsule at a dose of 6 milligram (mg) for 1 week and then will be administered at a dose of either 3, 6 or 9 mg up to Week 26, once daily in the morning.
