Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	11 September 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 March 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate if treatment with Mircera or Continuous Erythropoietin Receptor Activator (C.E.R.A.) has a protective effect on the kidney of CKD stage III participants.

Protection of trial subjects:

The study was designed, conducted, and evaluated according to the study protocol and in compliance with the International Conference of Harmonisation (ICH) guidelines on Good Clinical Practice (GCP) E6 and the Declaration of Helsinki, as well as with local legal requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 August 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 241
Worldwide total number of subjects	241
EEA total number of subjects	241

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	114
From 65 to 84 years	123
85 years and over	4

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Total 241 participants were randomized, 2 participants in the Mircera group and 4 participants in the placebo group did not receive medication.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Single blind
Roles blinded	Subject

Arms

Are arms mutually exclusive?	Yes
Arm title	Mircera

Arm description:

Methoxy polyethylene glycol-epoetin beta 30 microgram (mcg) subcutaneous injection once monthly up to 24 months with sequential dose adjustments to 50 mcg or 75 mcg depending on change of hemoglobin values of more than 1.0 gram (g)/ deciliter (dL).

Arm type	Experimental
Investigational medicinal product name	Mircera
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Methoxy polyethylene glycol-epoetin beta 30 microgram (mcg) subcutaneous injection once monthly up to 24 months.

Arm title	Placebo
------------------	---------

Arm description:

Placebo matching to methoxy polyethylene glycol-epoetin beta subcutaneous injection once monthly up to 24 months.

Arm type	Placebo
Investigational medicinal product name	NA
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo matching to methoxy polyethylene glycol-epoetin beta, administered as subcutaneous injection.

Number of subjects in period 1	Mircera	Placebo
Started	117	124
Completed	68	91
Not completed	49	33
Adverse event, serious fatal	3	2
Hemoglobin decrease	-	1
Consent withdrawn by subject	5	6
Blood pressure increase	5	3
Adverse event, non-fatal	9	5
Hemoglobin increase	12	3
Treatment with prohibited medication	4	5
Skipping of CERA treatment at two visits	3	-
Unspecified	4	-
Lost to follow-up	2	3
Did not receive study medication	2	4
Protocol deviation	-	1

Primary: Yearly Reduction Rate of Estimated Glomerular Filtration Rate (eGFR) Calculated by Modification of Diet in Renal Disease With 4 Variables (MDRD-4)

End point title	Yearly Reduction Rate of Estimated Glomerular Filtration Rate (eGFR) Calculated by Modification of Diet in Renal Disease With 4 Variables (MDRD-4)
End point description: The yearly reduction in eGFR was calculated using the MDRD-4 formula. This formula is based on age, sex, and serum creatinine and eGFR values are calculated as follows: $GFR \text{ in ml/min per } 1.73 \text{ m}^2 = 175 \times \text{Serum Cr}^{-1.154} \times \text{age}^{-0.203} \times 0.742$ (if female). The yearly reduction rate (mL/min/1.73m ² / Year) is defined as -365.25 multiplied by Beta, where Beta is the slope parameter derived for each participants separately by simple linear regression of the change from baseline in participant's eGFR measurements (from Baseline to Visit 24) on the actual day of measurement. FAS included all randomized participants who received at least one dose of the study medication and provided any successive eGFR measurement.	
End point type	Primary
End point timeframe: 24 months	

End point values	Mircera	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	115	120		
Units: eGFR/year				
least squares mean (confidence interval 95%)	3.04 (1.2 to 4.87)	0.82 (-0.96 to 2.61)		

Statistical analyses

Statistical analysis title	Yearly Reduction Rate of eGFR
Statistical analysis description: An analysis of covariance (ANCOVA) model with adjustment for baseline eGFR was used to obtain an estimate of the treatment difference.	
Comparison groups	Mircera v Placebo

Number of subjects included in analysis	235
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.657
Method	Wilcoxon (Mann-Whitney)
Parameter estimate	treatment effect
Point estimate	2.21
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.35
upper limit	4.78

Secondary: Yearly Reduction Rate of Estimated Glomerular Filtration Rate (eGFR) Calculated by Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI)

End point title	Yearly Reduction Rate of Estimated Glomerular Filtration Rate (eGFR) Calculated by Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI)
-----------------	--

End point description:

The eGFR value calculated using the CKD-EPI equation. The formula used is based on age, sex, ethnicity, and serum creatinine and eGFR values are calculated as follows: $GFR \text{ in mL/min per } 1.73 \text{ m}^2 = 141 \times \min(\text{SerumCr}/k; 1)^a \times \max(\text{SerumCr}/k; 1)^{-1.209} \times 0.993^{\text{age}} \times F \times B$, where $k=0.7$ for female (else=0.9); $a=-0.329$ for female (else=-0.411), $F=1.018$ for female (else=1), $B=1.159$ for black (else=1), min/max=minimum/maximum of listed values. The Yearly Reduction Rate (mL/min/1.73m² / Year) is defined as $-365.25 \times \text{Beta}$, where Beta is the slope parameter derived for each participant separately by simple linear regression of the change from baseline in participant's eGFR measurements (from Baseline to Visit 24) on the actual day of measurement. FAS included all randomized participants who received at least one dose of the study medication and provided any successive eGFR measurement.

Secondary: Change From Baseline in Calculated Creatinine Clearance (Cockcroft-Gault Equation) at Month 24

End point title	Change From Baseline in Calculated Creatinine Clearance (Cockcroft-Gault Equation) at Month 24
-----------------	--

End point description:

Creatinine clearance was calculated according to the Cockcroft and Gault Formula. It measures rate creatinine (substance formed from metabolism of creatine) is cleared from blood by kidneys. Normal adult creatinine clearance is greater than or equal to (\geq) 90 mL/min/1.73m². Change from baseline=CC at Week X minus CC at baseline where higher scores represented improved renal function. FAS included all randomized participants who received at least one dose of the study medication and provided any successive eGFR measurement. n=number of participants evaluable for each category.

End point type	Secondary

Units: ml/min]				
arithmetic mean (standard deviation)				
Baseline (n=115, 120)	53.18 (\pm 15.95)	52.48 (\pm 16.04)		
Change at Month 24 (n=67, 91)	-2.97 (\pm 10.52)	-2.08 (\pm 9.72)		

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline in Serum Creatinine Concentration at Month 24

End point title	Change From Baseline in Serum Creatinine Concentration at Month 24
-----------------	--

End point description:

Serum creatinine is an indicator of kidney function. Creatinine is a substance formed from the metabolism of creatine, commonly found in blood, urine, and muscle tissue. It is removed from the blood by the kidneys and excreted in urine. Normal adult blood levels of creatinine=45 to 90 micromoles per liter (mcmol/L) for females, 60 to 110 mcmol/L for males, however normal values are age-dependent.

FAS included all randomized participants who received at least one dose of the study medication and provided any successive eGFR measurement. n=number of participants evaluable for each category.

End point type	Secondary
----------------	-----------

arithmetic mean (standard deviation)				
Baseline (n=115, 120)	147.8 (± 31.71)	149.3 (± 35.67)		
Change at Month 24 (n=68, 91)	7.04 (± 27.23)	4.04 (± 30.99)		

Statistical analyses

No statistical analyses for this end point

Secondary: Change From Baseline in Urinary Albumin Creatinine Ratio (UACR) at Month 24

End point title	Change From Baseline in Urinary Albumin Creatinine Ratio (UACR) at Month 24
-----------------	---

End point description:

UACR is defined as the ratio: milligram of albumin per gram of creatinine. The presence of albumin in the urine (macroalbuminuria) is a marker of kidney disease. Albumin and creatinine concentrations were obtained from spot urine samples.

FAS included all randomized participants who received at least one dose of the study medication and provided any successive eGFR measurement. Number of Participants Analyzed (N) = number of participants evaluable and available with valid data for this outcome measure. n=number of participants evaluable for each category.

End point type	Secondary

Baseline (n=115, 120)	1.79 (± 0.39)	1.76 (± 0.46)		
Change at Month 24 (n=67, 91)	0.1 (± 0.29)	0.02 (± 0.33)		

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants With Adverse Events (AEs) and Serious Adverse Events (SAEs)

End point title	Percentage of Participants With Adverse Events (AEs) and Serious Adverse Events (SAEs)
-----------------	--

End point description:

An AE was any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. An SAE was an AE resulting in any of the following outcomes or deemed significant for any other reason: death; initial or prolonged inpatient hospitalization; life-threatening experience (immediate risk of dying); persistent or significant disability or incapacity; and congenital anomaly. Percentage of participants with AEs included participants affected with both SAEs and non-SAEs.

The Safety Analysis Set (SAF) included all participants who received at least one dose of the study medication. Analysis for SAF was performed according to the study medication actually received ('as treated' population).

End point type	Secondary
----------------	-----------

End point timeframe:

24 months

End point values	Mircera	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	115 ^[1]	120 ^[2]		
Units: percentage of participants				
number (not applicable)				
SAEs	35.6	41		
AEs	84.7	86.3		

Notes:

[1] - N=117 (as treated population) were evaluable for this outcome measure.

[2] - N=118 (as treated population) participants evaluable for this outcome measure.

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

24 months

Adverse event reporting additional description:

The Safety Analysis Set (SAF) included all participants who received at least one dose of study medication. Analysis for SAF was performed according to the study medication actually received (as treated population).

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 December 2010	Version 1: Protocol was amended to clarify the inclusion criteria (UACR, creatinine and total protein values needed for inclusion in the study) and exclusion criteria (an additional organ transplant, other than kidney and participants with myelofibrosis or a diagnosed hematologic disease were excluded). Acute transplant rejection and pregnancy were included as withdrawal criteria and erythropoietin-stimulating agent (ESAs) were included as prohibited concomitant medication. Visit 2 was defined to be the time point for starting possible dose adjustments of C.E.R.A.
16 August 2011	Version 2: UACR, creatinine and total protein values needed for inclusion in the study were changed. Increases and decreases in hemoglobin values of more than 1.5 g/dl now had to be present in combination with a current value of >14,0 g/dl or <10 g/dl respectively to allow for treatment discontinuation or premature withdrawal of the participant.
04 June 2012	Version 3: Due to temporarily stopped manufacturing of C.E.R.A., enrollment of new participants into the study was halted. To avoid any recruitment problems and any further extension of the duration of the study, the sample size calculation, total participant numbers as well as recruitment timelines were adapted. To avoid any recruitment problems and any further extension of the duration of the study, the sample size calculation, total participant numbers as well as recruitment timelines were adapted. The reporting time lines for possible SAE and pregnancies were specified in more detail.
06 May 2014	Version 4: As most of the participants had already had their EoS visit after the recruitment stop of the study, an interim analysis was no longer scheduled as originally planned. Change in eGFR over time calculated additionally by CKD-EPI equation (based on the same variables as MDRD) was included as a secondary efficacy parameter.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
