Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 August 2016
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	25 August 2016
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study was to assess the safety of extended treatment with DAC HYP monotherapy in participants with relapsing-remitting multiple sclerosis (RRMS). The secondary objectives of this study were to assess the long-term immunogenicity of DAC HYP and the durability of response to DAC HYP in preventing multiple sclerosis (MS) relapse, slowing disability progression, and reducing new MS lesion formation in this study population.

Protection of trial subjects:

Written informed consent was obtained from each participant prior to evaluations performed for eligibility. Participants were given adequate time to review the information in the informed consent and were allowed to ask, and have answered, questions concerning all portions of the conduct of the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 March 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Russian Federation: 105
Country: Number of subjects enrolled	Poland: 100
Country: Number of subjects enrolled	Czech Republic: 63
Country: Number of subjects enrolled	Ukraine: 57
Country: Number of subjects enrolled	Hungary: 44
Country: Number of subjects enrolled	United Kingdom: 22
Country: Number of subjects enrolled	India: 11
Country: Number of subjects enrolled	Germany: 8
Worldwide total number of subjects	410
EEA total number of subjects	237

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	410
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Out of 410 enrolled participants, 60 participants who received at least 6 consecutive monthly doses of DAC HYP in this study and had provided written informed consent were enrolled in to the autoinjector substudy and 91 participants who received seasonal trivalent influenza vaccine were enrolled in vaccine substudy (exploratory analyses).

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	BIIB019
-----------	---------

Arm description:

Participants received BIIB019, 150 mg subcutaneous injection every 4 weeks up to Week 276.

Arm type	Experimental
Investigational medicinal product name	BIIB019
Investigational medicinal product code	
Other name	Daclizumab high-yield process (DAC HYP)
Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

50 mg subcutaneous (SC) injection every 4 weeks.

Number of subjects in period 1	BIIB019
Started	410
Completed	237
Not completed	173
Adverse event, non-fatal	88
Subject non-compliance	7
Investigator Decision	6
Lost to follow-up	6
Reason not Specified	12
Consent Withdrawn	54

Baseline characteristics

Reporting groups

Reporting group title	BIIB019

Subject analysis set type	Sub-group analysis
Subject analysis set description:	
Participants received BIIB019, 150 mg subcutaneous injection using an autoinjector every 4 weeks up to Week 276.	

Primary: Percentage of Participants With Adverse Events (AEs), Serious Adverse Events (SAEs), Discontinuation due to AEs, Withdrawals due to AEs

End point title	Percentage of Participants With Adverse Events (AEs), Serious Adverse Events (SAEs), Discontinuation due to AEs, Withdrawals due to AEs ^[1]
-----------------	--

End point description:

An AE is defined as any untoward medical occurrence in a clinical investigation participant administered a drug; it does not necessarily have to have a causal relationship with this treatment. A SAE is any untoward medical occurrence or effect that at any dose results in death, is life-threatening, requires inpatient hospitalization or prolongation of existing hospitalization, results in persistent or significant disability / incapacity, is a congenital anomaly / birth defect or is medically important due to other reasons than the above mentioned criteria.

End point type	Primary
----------------	---------

End point timeframe:

Baseline up to 24 weeks after last dose of treatment (Up to 300 weeks)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical analysis was not performed for this endpoint.

Secondary: Summary of Injection Site Assessment Performed by Clinician

End point title	Summary of Injection Site Assessment Performed by Clinician
-----------------	---

End point description:

Injection site assessment was performed by clinician and are defined as erythema (redness) rated on a 4 point scale ranging from 0-3, where 0=none, 1=mild, 2=moderate and 3=severe; pigmentation changes (skin discoloration other than redness) rated on a 3 point scale from 0-2, where 0=none, 1=hypopigmentation and 2=hyperpigmentation; induration (swelling) rated on a 4 point scale ranging from 0-3, where 0=none, 1=mild, 2=moderate and 3=severe; tenderness to pressure rated on a 4 point scale ranging from 0-3, where 0=none, 1=mild, 2=moderate and 3=severe; and local temperature changes of injection sites rated on a 3 point scale where 0=normal, 1=warm and 1=hot. Only those score categories for which there was at least 1 participant are reported. Here, Injection=Inj, post-dose=PD

End point type	Secondary
----------------	-----------

End point timeframe:

First injection (Day 1) and fourth injection (Day 90) 30 minutes; 8, 24, 72, and 120 hours; and 7, 10, and 14 days post-dose

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Baseline up to 24 weeks after last dose of treatment (Up to 300 weeks)

Adverse event reporting additional description:

Treatment emergent AEs are presented regardless of seriousness or relationship to investigational product

Assessment type	Systematic
-----------------	------------

Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	16.1
--------------------	------

Reporting groups

Reporting group title	BIIB019
-----------------------	---------

Reporting group description:

Participants received BIIB019, 150 mg subcutaneous injection every 4 weeks up to Week 276.

Serious adverse events	BIIB019		
Total subjects affected by serious adverse events			
subjects affected / exposed	148 / 410 (36.10%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events			
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Anal cancer			
subjects affected / exposed	1 / 410 (0.24%)		
occurrences causally related to treatment / all	1 / 1		
deaths causally related to treatment / all	0 / 0		
Benign neoplasm of bladder			
subjects affected / exposed	1 / 410 (0.24%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Breast cancer			
subjects affected / exposed	3 / 410 (0.73%)		
occurrences causally related to treatment / all	0 / 3		
deaths causally related to treatment / all	0 / 0		
Clear cell renal cell carcinoma

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 June 2011	<ul style="list-style-type: none">• The primary reason for this amendment was to increase subject monitoring for laboratory signals related to hepatic function (Liver function test (LFT) monitoring was increased from every 6 months to monthly throughout the treatment period) and to add criteria for temporary suspension and discontinuation of study treatment for subjects who developed elevations in alanine aminotransferase (ALT), aspartate aminotransferase (AST), or total bilirubin. Subjects who permanently discontinued study treatment due to elevated LFTs were to be evaluated for possible toxicological, infectious, immunological, and metabolic causes of liver injury.• Additional guidance was provided to Investigators on the evaluation and management of cutaneous events.• The use of the DAC HYP PFS was allowed.
05 April 2012	<ul style="list-style-type: none">• The primary reason for this amendment was to prohibit concomitant treatment with medications that have an established association with hepatotoxicity or cutaneous hypersensitivity reactions.• Monthly LFT results were provided to the Neurologist prior to administration of study treatment to assess whether treatment suspension criteria were met.• Subjects were provided an additional 3 years of open-label treatment with DAC HYP.
12 December 2012	<ul style="list-style-type: none">• The primary reason for this amendment was the addition of the 2013-2014 influenza vaccine substudy
24 May 2013	<ul style="list-style-type: none">• The primary reason for this amendment was to reintroduce physical examination, vital signs, hematology, and blood chemistry assessments at Week 96.
13 June 2013	<ul style="list-style-type: none">• The primary reason for this amendment was to reintroduce urinalysis assessment at Week 96.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
