

Clinical trial results:

A phase III, multicentre, double-blind, prospective, randomised, placebo controlled study, assessing the efficacy and safety of Dysport used for the treatment of lower limb spasticity in adult subjects with hemiparesis due to stroke or traumatic brain injury

Summary

EudraCT number	2009-015868-34
Trial protocol	BE CZ SK IT PT HU
Global end of trial date	13 May 2014

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 April 2015
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	13 May 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary study objective is to assess the efficacy of Dysport compared to placebo at Week 4 on the change from baseline in the gastrocnemius-soleus complex (GSC) muscle tone (knee extended) in hemiparetic subjects with lower limb spasticity due to stroke or traumatic brain injury.

Protection of trial subjects:

This clinical study was designed and implemented and reported in accordance with the International Conference on Harmonisation (ICH) Harmonized Tripartite Guidelines for Good Clinical Practice (GCP), with applicable local regulations (including European Directive 2001/20/EC, US Code of Federal Regulations Title 21, and Japanese Ministry of Health, Labor, and Welfare), and with the ethical principles laid down in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator:

Placebo

Actual start date of recruitment	29 March 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	6 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 86
Country: Number of subjects enrolled	Portugal: 12
Country: Number of subjects enrolled	Slovakia: 16
Country: Number of subjects enrolled	Belgium: 19
Country: Number of subjects enrolled	Czech Republic: 18
Country: Number of subjects enrolled	France: 54
Country: Number of subjects enrolled	Hungary: 15
Country: Number of subjects enrolled	Italy: 24
Country: Number of subjects enrolled	Australia: 43
Country: Number of subjects enrolled	Russian Federation: 30
Country: Number of subjects enrolled	United States: 68
Worldwide total number of subjects	385
EEA total number of subjects	244

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	319
From 65 to 84 years	66
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This was a multicenter study conducted in 62 investigational sites. Subjects were screened at 53 centers and in 52 centers subjects were randomized to receive study treatment.

Pre-assignment

Screening details:

Subjects randomized were 388 and 385 subjects who received treatment were included in the safety population. Only 381 subjects were included in the intent-to-treat (ITT) population. Subjects excluded from ITT population were 7 (including 4 subjects due to no MAS score at the baseline and/or at Week 4).

Pre-assignment period milestones

Number of subjects started	456 ^[1]
Number of subjects completed	388

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Screening Failures: 68
----------------------------	------------------------

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same. Either resolve this issue or provide a justification.

Period 1

Period 1 title	Randomised Population
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes

Primary: Change from baseline in Modified Ashworth Scale (MAS) score in the Gastrocnemius Soleus Complex (Knee Extended)

End point title	Change from baseline in Modified Ashworth Scale (MAS) score in the Gastrocnemius Soleus Complex (Knee Extended) ^[1]
End point description: Intention to treat (ITT) population	
MAS is a 6-point scale which measures the amount of muscle tone by measuring the resistance of the muscle to passive lengthening or stretching. A low score indicated little or no stiffness (best). A high score indicated severe stiffness (worse). The number of participants in each score category is presented	
End point type	Primary
End point timeframe: At week 4	

Notes:

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
18 April 2011	Amendment 2: The procedure for blinding and breaking the blind was clarified. The statistical methodology for the primary and first secondary efficacy endpoints was modified to account for separate registration in US and non-US countries.
09 February 2012	Amendment 3: The definition of naïve and non naïve subjects was clarified following questions raised by the investigators. A naïve subject was one who had never received any BTX in the affected lower limb. Criterion 6, regarding exclusion due to surgery was clarified and made more specific to refer only to surgery for spasticity on the affected lower limb. Exclusion criterion 19 was added to exclude the use of intrathecal baclofen during the course of the study or during the 4 weeks before entering the study. The study duration was amended to reflect new timelines and a delay in subject recruitment.
12 July 2012	Amendment 4: Inclusion criterion 3 was altered to allow entry into the study of subjects with a nonevolutive lesion diagnosed before the stroke and in the same cerebral hemisphere. Inclusion criterion 7 was altered to include subjects with a spasticity angle greater than or equal to 5 degrees (instead of greater than 5 degrees) in the GSC of the affected leg as assessed by the TS. The wording of Section 9.5 was amended to clarify the meaning and take into account all possibilities regarding used and unused treatments and empty boxes for destruction. References to sponsor's CDDS Department were amended to Statistics Department. The pharmacovigilance/emergency contact details for the USA were updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
