Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 March 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	18 March 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of Phase 1b was to define the maximum tolerated dose (MTD)/dose recommended for Phase II of eribulin mesylate, administered in combination with pemetrexed in subjects with nonsquamous, non-small cell lung cancer (NSCLC), previously treated with 1 cytotoxic chemotherapy regimen for stage IIIB or IV disease. The primary objective of Phase 2 was to evaluate the safety and tolerability of multiple doses of eribulin administered in combination with pemetrexed, compared with pemetrexed alone as second-line therapy in subjects with advanced nonsquamous NSCLC.

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following: - Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008) - International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use - Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312 - European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states. - Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Actual start date of recruitment	10 June 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Ukraine: 39
Country: Number of subjects enrolled	United States: 16
Country: Number of subjects enrolled	Czechia: 25
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Italy: 12
Worldwide total number of subjects	98
EEA total number of subjects	43

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	69
From 65 to 84 years	29
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 23 investigative sites in the United States, Germany, Italy, Ukraine, and the Czech Republic from 10 June 2010 to 18 March 2015.

Pre-assignment

Screening details:

A total of 15 subjects were enrolled and treated in Phase 1b portion of the study and 83 subjects were randomized of which 80 subjects received study treatment in Phase 2 portion of the study.

Period 1

Period 1 title	Phase 1b and Phase 2 (overall) (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Phase 1b: Arm 1 - Cohort 1 (Eribulin+Pemetrexed)

Arm description:

Subject received intravenous (IV) bolus of eribulin 0.9 milligram per square meter (mg/m²) in combination with IV infused pemetrexed 500 mg/m² on Day 1 of each 21-day treatment cycle. Subject within the same cohort received the same dose of eribulin. Subject also received dexamethasone and vitamin supplements as recommended in the prescribing information for pemetrexed. The dose of eribulin was escalated to 1.4 mg/m² in Cohort 2 of Arm 1.

Arm type	Experimental
Investigational medicinal product name	Eribulin Mesilate
Investigational medicinal product code	E7389
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received eribulin mesylate 0.9 mg/m², IV infusion in combination with pemetrexed (500 mg/m²) on Day 1 of a 21 day treatment cycle.

Arm title	Phase 1b: Arm 1 - Cohort 2 (Eribulin + Pemetrexed)
------------------	--

Arm description:

Subjects received IV bolus of eribulin 1.4 mg/m² in combination with IV infused pemetrexed (500 mg/m²) on Day 1 of each 21-day treatment cycle. Subjects within the same cohort received the same dose of eribulin. Subjects also received dexamethasone and vitamin supplements as recommended in the prescribing information for pemetrexed. The dose of eribulin was not further escalated.

Arm type	Experimental
Investigational medicinal product name	Eribulin Mesilate
Investigational medicinal product code	E7389
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received eribulin mesylate 1.4 mg/m², IV infusion in combination with pemetrexed (500 mg/m²) on Day 1 of a 21 day treatment cycle.

Arm title	Phase 1b: Arm 2 - Cohort 1 (Eribulin + Pemetrexed)
------------------	--

Arm description:

Subjects received IV bolus of eribulin 0.7 mg/m² on Days 1 and 8 of each 21-day treatment cycle. On Day 1 only of each 21-day treatment cycle, subjects also received IV infused pemetrexed (500

mg/m²). Subjects within the same cohort received the same dose of eribulin. Subjects also received dexamethasone and vitamin supplements as recommended in the prescribing information for pemetrexed. The dose of eribulin was not further escalated.

Arm type	Experimental
Investigational medicinal product name	Eribulin Mesilate
Investigational medicinal product code	E7389
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received eribulin mesylate 0.7 mg/m², IV infusion in combination with pemetrexed (500 mg/m²) on Days 1 and 8 of a 21 day treatment cycle.

Arm title	Phase 2: Arm 1 (Eribulin 0.9 mg/m ² + pemetrexed 500 mg/m ²)
------------------	---

Arm description:

Subjects received IV bolus of eribulin 0.9 mg/m² in combination with IV infused pemetrexed (500 mg/m²) on Day 1 of each 21-day treatment cycle. Dexamethasone and vitamin supplements were administered as recommended in the prescribing information for pemetrexed.

Arm type	Experimental
Investigational medicinal product name	Eribulin Mesilate
Investigational medicinal product code	E7389
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received eribulin mesylate 0.9 mg/m², IV infusion in combination with pemetrexed (500 mg/m²) on Day 1 of a 21 day treatment cycle.

Arm title	Phase 2: Arm 2 (Pemetrexed 500 mg/m ²)
------------------	--

Arm description:

Subjects received IV infused pemetrexed (500 mg/m²) alone on Day 1 of each 21-day treatment cycle. Dexamethasone and vitamin supplements were administered as recommended in the prescribing information for pemetrexed.

Arm type	Experimental
Investigational medicinal product name	Pemetrexed
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received pemetrexed 500 mg/m² IV infusion on Day 1 of a 21 day treatment cycle.

Primary: Phase 1b: Percentage of Subjects With Grade 3 or Higher Treatment Emergent Adverse Events (TEAEs)

End point title	Phase 1b: Percentage of Subjects With Grade 3 or Higher Treatment Emergent Adverse Events (TEAEs) ^{[3][4]}
-----------------	---

End point description:

Safety assessment included monitoring and recording all AE including all Common Terminology Criteria for Adverse Events (CTCAE) version 4.0 grades (for both increasing and decreasing severity), and serious adverse events (SAE); regular monitoring of hematology, blood chemistry, and urine values; periodic measurement of vital signs and electrocardiograms (ECGs); and performance of physical examinations. A TEAE was defined as an AE that had on onset date, or a worsening in severity from Baseline (pretreatment), on or after the first dose of study drug up to the end of the study. Phase 1b safety analysis set was defined as all subjects enrolled into the Phase 1b portion of this study. As per CTCAE, Grade 1 scales as Mild; Grade 2 scales as Moderate; Grade 3 scales as severe or medically significant but not immediately life threatening; Grade 4 scales as life-threatening consequences; and Grade 5 scales as death related to AE.

End point type	Primary
----------------	---------

End point timeframe:

From date of first dose up to 30 days after the last dose of study drug, up to approximately 1 year 2 months

Notes:

Secondary: Phase 2: Progression-free Survival (PFS) in Subjects Receiving Eribulin in Combination With Pemetrexed or Pemetrexed Alone

End point title	Phase 2: Progression-free Survival (PFS) in Subjects Receiving Eribulin in Combination With Pemetrexed or Pemetrexed Alone ^[7]
-----------------	---

End point description:

PFS was defined as the time from the date of randomization until the earlier of the following two events: the date of PD or the date of death based on response evaluation criteria in solid tumor (RECIST) version 1.1. Progressive disease (PD) is defined as at least a 20 percent (%) increase or 5 millimeter (mm) increase in the sum of diameters of target lesions (taking as reference the smallest sum on study) recorded since the treatment started or the appearance of 1 or more new lesions. PFS was estimated and analyzed using Kaplan Meier method. Modified intent-to-treat population included all randomized subjects who received at least one dose of study drug without major protocol eligibility violations.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 May 2010	Protocol Amendment 01: Clarified that subjects experiencing clinical benefit following 6 cycles of study treatment could, at the discretion of the Investigator and in consultation with the Medical Monitor, continue pemetrexed with or without eribulin or single-agent eribulin; Clarified that follow-up was to be for up to 1 year after the end of treatment; Clarified that dose reductions were not permitted in Cycle 1 of Phase 1b; Clarified the use of erythroid-stimulating agents; Added lymph nodes to the physical examination; Clarified that electronic case report forms would be used; Clarified that the Medical Monitor would be the contact person for any questions regarding treatment.
25 May 2010	Protocol Amendment 02: For Germany only - clarified that treatment would last no longer than 24 months.
30 March 2011	Protocol Amendment 03: Set the dose for the Phase 2 portion of the study and changes the design from a 3 arm to a 2 arm design; Due to changes in the Tumor Node Metastasis (TNM) staging system, the study title was changed to include subjects with advanced NSCLC; Updated Introduction with information from the Phase 1b portion of the study; Changed inclusion criteria for liver function from ALT/AST of 3*upper limit of normal (ULN) to $\leq 2 \times \text{ULN}$ and $\leq 3 \times \text{ULN}$ in the case of liver metastases; Added exclusion of subjects with a high probability of Long QT Syndrome; Added stopping criteria for Phase 2; Allowed for standard of care labs to be used for Screening labs if collected within 21 days of the first dose of study treatment; Clarified when other lab assessments were to be collected; Changed frequency of radiological scans from every 2 cycles to every 6 weeks (+/- 7 days); Clarified dose modification guidelines; Clarified the use of granulocyte colony-stimulating factor and granulocyte macrophage colony-stimulating to allow prophylactic use after Day 21; Inconsistencies in the text are also clarified/corrected.
04 April 2011	Protocol Amendment 04: For Germany only, was identical to Amendment 3 only with the Germany-specific language from Amendment 2 included.
04 April 2011	Protocol Amendment 05: For Argentina and Brazil only, was identical to Amendment 3 but with the addition of HBV, HCV, and HIV serology at Screening.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
