Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 December 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	12 April 2013
Global end of trial reached?	Yes
Global end of trial date	30 July 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Dose optimization phase:

Primary objective:

To determine the recommended dose (RD) for PM00104 administered as 1-hour (h) intravenous (i.v.) infusion on Days (D) 1, 8 and 15 every four weeks (q4wk) in relapsed/refractory multiple myeloma (MM) patients

Dose expansion phase:

Primary objective:

To analyze the efficacy following treatment with PM00104 in patients with MM relapsed or refractory to standard therapy at the RD established during the dose optimization phase.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	08 March 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 36
Worldwide total number of subjects	36
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	24
From 65 to 84 years	12
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

From 8 March 2010 to 12 December 2012 in ten sites in Spain

Pre-assignment

Screening details:

Patients had to give written informed consent, Age ≥ 18 years, previously diagnosed with MM, have relapsed or relapsed/refractory disease, have measurable disease, recovery from any toxicity derived from previous treatments, have some adequate laboratory values, performance status ≤ 2 , Life expectancy ≥ 3 months, LVEF of at least 50%.

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Dose optimization phase

Arm description:

Zalypsis® (PM00104) in Relapsed/Refractory Multiple Myeloma Patients. A dose optimization phase was conducted to determine the appropriate dose of PM00104 in relapsed/refractory MM patients

Arm type	Experimental
Investigational medicinal product name	Zalypsis®
Investigational medicinal product code	PM00104
Other name	
Pharmaceutical forms	Powder for concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

A treatment cycle consisted of the administration of three i.v. 1-h infusions of PM00104 on D1, D8 and D15. Treatment cycles were to be repeated every four weeks. PM00104 administration through a central catheter and by specialized on-site study personnel was mandatory. PM00104 was provided as a powder for concentrate for solution for infusion in only one strength of 2.5 mg per vial.

Arm title	Dose expansion phase
------------------	----------------------

Arm description:

Zalypsis® (PM00104) in Relapsed/Refractory Multiple Myeloma Patients. Once the recommended dosing had been defined, up to 37 more patients were to be recruited into the dose expansion phase in order to evaluate the anti-MM effects of PM00104. These patients were to receive single-agent PM00104 at the RD established in the earlier dose optimization phase, given as 1-h i.v. infusion on D1, D8 and D15 in cycles of 28 days.

Arm type	Experimental
Investigational medicinal product name	Zalypsis®
Investigational medicinal product code	PM00104
Other name	
Pharmaceutical forms	Powder for concentrate for solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

PM00104 administration through a central catheter and by specialized on-site study personnel was mandatory. PM00104 was provided as a powder for concentrate for solution for infusion in only one strength of 2.5 mg per vial.

Number of subjects in period 1 ^[1]	Dose optimization phase	Dose expansion phase
Started	22	13
Treatment	21	13
Completed	0	0
Not completed	22	13
Progression disease	9	6
Physician decision	2	3
Consent withdrawn by subject	-	2
Toxicity	2	1
Adverse event, non-fatal	2	1
Death	6	-
Not treated	1	-

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: There was a patient in the dose expansion phase that was excluded from all tables due to the overdose

Primary: Dose-limiting toxicities

End point title	Dose-limiting toxicities ^{[1][2]}
End point description: Number of DLTs per dose level	
End point type	Primary
End point timeframe: Dose optimization phase. Treatment period	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: This end point was conducted to determine the appropriate dose of PM00104 in relapsed/refractory MM patients. Statistical analyses do not apply because the RD was the dose level immediately below the MTD. The maximum tolerated dose (MTD) was defined as the level at which ≥33% evaluable patients have a DLT in Cycle 1.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This end point was conducted to determine the appropriate dose of PM00104 in relapsed/refractory MM patients and it only affects to the dose optimization phase population.
