

Clinical trial results:

A randomized, double-blind, placebo-controlled, multicenter, two-part, dose ranging and confirmatory study with an operationally seamless design, evaluating efficacy and safety of SAR153191 on top of methotrexate (MTX) in patients with active rheumatoid arthritis who are inadequate responders to MTX therapy

General information about the trial

Main objective of the trial:

This phase II/III study in subjects with active rheumatoid arthritis used an operationally seamless design. Main objectives were:

Phase II - 12 week dose-ranging study (part A): to evaluate efficacy and safety of 5 dose regimens of sarilumab (SAR153191/REGN88) on top of methotrexate (MTX);

Phase III - 52-week confirmatory study (part B): to confirm the efficacy and safety of the 2 dose regimens selected from part A.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency.

Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy:

All subjects were treated with weekly MTX for the duration of the study and received the same weekly dose as they were receiving prior to enrollment. Subjects were required to be stable for at least 6 weeks prior to the screening visit.

Evidence for comparator: -

Actual start date of recruitment	22 March 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 247 centers in 36 countries. Overall, 3715 subjects were screened between March 2010 and July 2012, 2040 of whom were screen failures. Screen failures were mainly due to failure to meet the inclusion criterion for severity of the disease and/or due to meeting the exclusion criterion.

Pre-assignment

Screening details:

Randomization was performed centrally with allocation generated by Interactive Voice/Web Response System, stratified by geographical region and prior biological use. 306 subjects were randomized in Part A. 1369 subjects were randomized in part B, 172 before dose selection (cohort 1) and 1197 after dose selection (cohort 2).

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

Investigators were blinded with regard to each subject's CRP and IL-6 levels, except at screening and baseline, with the swollen and tender joint counts performed by a separate qualified assessor. Two readers, blinded with regard to treatment assignment, chronologic order of the radiographs, and subject's clinical status, independently reviewed and scored images using the modified Sharp/van der Heijde scoring (SHS) system.

End point description:

ACR20 response is defined, based on guidelines set forth by the American College of Rheumatology (ACR), as $\geq 20\%$ improvement in tender joint count and swollen joint count as well as $\geq 20\%$ improvement in at least 3 of 5 following measures: C-Reactive Protein (CRP), subject assessment of pain; subject global assessment of disease activity; physician global assessment of disease activity; and Health Assessment Question-Disability Index (HAQ-DI).

Analysis was carried out on Part A Intent-to-treat (ITT) population defined as all randomized subjects who received at least 1 dose of study drug.

Statistical analyses

Statistical analysis title	Sarilumab 150 mg q2w vs. Placebo
----------------------------	----------------------------------

Statistical analysis description:

Analysis was performed using two-sided Cochran-Mantel-Haenszel test. Pairwise comparisons of the response rates between each dose of sarilumab and placebo was derived. The multiplicity issues for part B were addressed by using a Bonferroni correction for each dose together with a hierarchical testing procedure across the 3 co-primary and the main secondary endpoints. The hierarchical testing sequence continued only when previous endpoint was statistically significant at 0.025 level.

End point title	Part B: Change From Baseline in Health Assessment Question-Disability Index (HAQ-DI) at Week 16
-----------------	---

End point description:

HAQ-DI is a subject-reported questionnaire that assesses the difficulty of performing daily activities: dress/groom, arise, eat, walk, reach, grip, hygiene and common activities. Overall score range from 0=least difficulty to 3=extreme difficulty. An increase in the score indicates a worsening of physical function while a decrease in the score represents improvement.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All Adverse Events (AE) were collected from signature of the informed consent form up to study completion regardless of seriousness or relationship to investigational product.

Adverse event reporting additional description:

Reported AEs and deaths are treatment-emergent that is AEs that developed/worsened and deaths that occurred during the 'treatment-emergent period' (from the first IMP injection up to the end of the study).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 February 2010	This amendment was prepared primarily to clarify the Skin Purified Protein Derivative (PPD) test to be performed at screening according to local regulation and to add a statement on male contraception further to Ethic Committee request.
01 June 2010	This amendment was prepared primarily to indicate randomization specificities in selected countries and to add sampling time points.
04 April 2011	This amendment was prepared primarily to support the start of the Phase 3 clinical trial with the new drug product (different cell line, manufacturing process, formulation and presentation of the IMP).
04 November 2011	This amendment was prepared primarily to indicate the two dose regimens that were selected for phase 3 program based on results of the Part A phase 2 study.
08 August 2012	This amendment was prepared primarily to add new safety measures to prevent the administration of sarilumab to subjects at risk for thrombocytopenia and/or neutropenia.
29 October 2012	This amendment was prepared primarily to modify the primary objective and primary endpoints. HAQ-DI and mTSS were converted to primary endpoints.
08 October 2013	This amendment was prepared primarily to re-order the testing of the primary endpoints reconsidering the role of the HAQ-DI endpoint and also change the timing for this specific endpoint.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to system constraints and legibility issue, part B arms with non-selected doses were grouped in the Subject dispositions section and were not reported in the Adverse events section. In total 4 serious AEs (no death) were reported in these arms.
