

Clinical trial results:

A randomized, double-blind, placebo-controlled Phase 3 study of SGN-35 (brentuximab vedotin) and best supportive care (BSC) versus placebo and BSC in the treatment of patients at high risk of residual Hodgkin lymphoma (HL) following autologous stem cell transplant (ASCT)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 April 2020
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 April 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to compare the progression-free survival (PFS) of brentuximab vedotin and best supportive care (BSC) versus placebo and BSC.

Protection of trial subjects:

The protocol for this study was designed in accordance with the general ethical principles outlined in the Declaration of Helsinki. The conduct of all aspects of the study, including methods for obtaining informed consent, were also in accordance with principles enunciated in the declaration, the International Conference on Harmonisation (ICH) Good Clinical Practices (GCP), and applicable Food and Drug Administration (FDA) regulations/guidelines set forth in Title 21 CFR Parts 11, 50, 54, 56, and 312.

The consent form approved by each IRB/IEC included all elements required by the applicable regional laws and regulations, including a statement that Seattle Genetics, Inc. and authorities had access to patient records. Consent was obtained from all patients before any protocol-required procedures were performed, including any procedure not part of normal patient care.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 April 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Regulatory reason
Long term follow-up duration	6 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	321
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Apr 2010 to Aug 2014

Pre-assignment

Screening details:

Patients with HL who have received ASCT in the previous 30–45 days

Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Data analyst, Carer

Arms

Are arms mutually exclusive?	No
------------------------------	----

Arm title	Brentuximab vedotin
------------------	---------------------

Arm description:

Brentuximab vedotin 1.8 mg/kg every 3 weeks by IV infusion

Arm type	Experimental
Investigational medicinal product name	Brentuximab vedotin
Investigational medicinal product code	
Other name	ADCETRIS, SGN-35
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Brentuximab vedotin 1.8 mg/kg every 3 weeks by IV infusion

Arm title	Placebo
------------------	---------

Arm description:

Placebo every 3 weeks by IV infusion

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for injection
Routes of administration	Intravenous use

Dosage and administration details:

Placebo every 3 weeks by IV infusion

Number of subjects in period 1	Brentuximab vedotin	Placebo
Started	165	164
Completed	78	81
Not completed	87	83
Adverse event, serious fatal	2	-

Adverse event, non-fatal	52	10
Patient decision, non-AE	9	4
Progressive disease	24	69

Reporting group description:	
Brentuximab vedotin 1.8 mg/kg every 3 weeks by IV infusion	
Reporting group title	Placebo
Reporting group description:	
Placebo every 3 weeks by IV infusion	
Subject analysis set title	BV Arm - Safety Analysis Set
Subject analysis set type	Safety analysis
Subject analysis set description:	
Safety Analysis Set includes all patients who received at least 1 dose of brentuximab vedotin or only received placebo: 2 patients randomized to placebo received a single dose of brentuximab vedotin and are included in the brentuximab vedotin arm; 2 patients randomized to placebo received no study treatment and are not included in the analysis	
Subject analysis set title	Placebo Arm - Safety Analysis Set
Subject analysis set type	Safety analysis
Subject analysis set description:	
Safety Analysis Set includes all patients who received at least 1 dose of brentuximab vedotin or only received placebo: 2 patients randomized to placebo received a single dose of brentuximab vedotin and are included in the brentuximab vedotin arm; 2 patients randomized to placebo received no study treatment and are not included in the analysis	

Primary: Progression-free survival by independent review

End point title	Progression-free survival by independent review
End point description:	
Time from date of randomization to the first documentation of disease progression by independent review or to death due to any cause, whichever comes first.	
End point type	Primary
End point timeframe:	
Up to approximately 4 years	

End point values	Brentuximab vedotin	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	165 ^[1]	164 ^[2]		
Units: Months				
median (confidence interval 95%)	42.9 (30.4 to 42.9)	24.1 (11.5 to 999)		

Notes:

[1] - Intention-to-treat

[2] - 999 = Not available (follow-up is not long enough to assess an upper bound)

Statistical analyses

Statistical analysis title	Progression-free survival by independent review
Statistical analysis description:	
The primary analysis of PFS used a stratified log-rank test at a one-sided alpha level of 0.025. A stratified Cox regression model was used to estimate the HR and the corresponding 95% CI for the treatment effect. An HR <1 indicates that the duration of PFS is prolonged for patients on the	

brentuximab vedotin arm compared with patients on the placebo arm. The median PFS and its two-sided 95% CI for the median was calculated using the complementary log-log transformation method (Collett 1994).

Comparison groups	Brentuximab vedotin v Placebo
Number of subjects included in analysis	329
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0013
Method	Mantel-Haenszel
Parameter estimate	Hazard ratio (HR)
Point estimate	0.571

level	95 %
sides	2-sided
lower limit	0.404
upper limit	0.808
Variability estimate	Standard deviation

Secondary: Adverse events

End point title	Adverse events
End point description:	
Counts of participants who had treatment-emergent adverse events, defined as newly occurring (not present at baseline) or worsening after first dose of study drug. Relatedness to study drug was assessed by the investigator. Serious adverse events are reported from the time of informed consent. All events are from study day 1 pre-dose to the end of the safety reporting period. Participants with multiple occurrences of an adverse event within a category are counted once within the category.	
End point type	Secondary
End point timeframe:	
Up to 12 months

- BL positive, persistently positive post-BL	3	7		

Notes:

[3] - ATA-evaluable patients (i.e., patients with a baseline and at least one postbaseline sample)

[4] - ATA-evaluable patients (i.e., patients with a baseline and at least one postbaseline sample)

Statistical analyses

No statistical analyses for this end point

Secondary: Overall Survival

End point title	Overall Survival
-----------------	------------------

End point description:

Time from date of randomization to date of death due to any cause.

Due to patients lost to follow up, patient withdrawal of consent and post ASCT therapies; there were less deaths on study than anticipated. Therefore, median OS was not reached. '999' is listed in lieu of "NA" due to requirement for numerical entry.

Full Observed Range:

Brentuximab Vedotin Arm: 1.31 to 117.88 months

Placebo Arm: 0.03 to 119.23 months

End point type	Secondary
----------------	-----------

End point timeframe:

Up to approximately 10 years

End point values	Brentuximab vedotin	Placebo		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	165	164		
Units: months	999	999		

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Non-serious adverse events were followed for up to 15 months. Serious adverse event data were collected for up to approximately 10 years (116 months).

Adverse event reporting additional description:

Treatment-emergent adverse events (TEAEs) defined as newly occurring (not present at baseline) or worsening after first dose of investigational product on Study SGN35-005

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 October 2009	The sample size was increased to 322 patients to enable detection of a hazard ratio of 0.667 in favor of brentuximab vedotin. Based on regulatory guidance, more frequent CT scanning and lymphoma assessments were incorporated to better characterize the primary endpoint of PFS. To better inform patient care after disease progression, the protocol was revised to allow unblinding of a patient's treatment assignment once disease progression had occurred. Investigator assessment of response to prior salvage therapy was added as a stratification factor to ensure that patients with different outcomes to salvage therapy were equally distributed between the treatment arms. Based on regulatory and investigator guidance and because of the blinded nature of the study, the prospective pathology review for confirmation of HL was removed.
16 August 2010	Administration of the EQ-5D health questionnaire and collection of MRU data was added to conduct exploratory health economics and outcomes research. A recommendation was added such that patients who experienced Grade 2 neuropathy were to resume treatment at 1.2 mg/kg to minimize additional or worsening events of neuropathy. The follow-up period for events of peripheral neuropathy and other AEs of interest was extended beyond the 30-day post-treatment reporting period to better characterize their resolution.
03 October 2011	The eligibility criteria were clarified to ensure exclusion of patients with PML. In addition, information and guidance were provided on the signs and symptoms of PML and diagnostic work-up/recommendations for suspending or discontinuing treatment with brentuximab vedotin in the event of PML.
29 November 2011	The safety assessments section was revised to better define the different subcategories of adverse events and provide guidance on their relative safety reporting periods; and to clarify sponsor safety reporting requirements in the US. The study assessments section was revised to require that any CT scans performed as standard of care after the 24-month scan were submitted for central review and study visits for patients who discontinued treatment before 16 cycles included all required assessments including CT scans and lymphoma assessments.
07 June 2012	The procedure for emergency unblinding was revised to allow investigators who needed treatment assignment information (for safety reasons or for clinical decision-making) to directly obtain treatment assignment information through the IWRS without having to first contact the sponsor. This change was made to better align with the recommendations of the EMA GCP Inspector's Working Group and Clinical Trial Facilitation Group.
13 December 2013	The timing of the primary efficacy analysis was changed after an evaluation of blinded, pooled PFS data from the current study showed a flattening of the PFS curve after 24 months; thus, it was unlikely that additional follow up after 24 months would provide significant additional events. The primary efficacy analysis was therefore changed to occur after all study scheduled CT scans had been performed. At this time, all patients had been off therapy for at least one year. The IDMC was consulted regarding this change to the primary analysis and they agreed that the scientific integrity of the study should remain intact.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
