

Clinical trial results:

An Open-Label, Randomized Study Evaluating a Switch from a Regimen of Two Nucleoside Reverse Transcriptase Inhibitors Regimen plus any Third Agent to either a Regimen of Atazanavir/Ritonavir Once Daily and Raltegravir Twice Daily or to a Regimen of Atazanavir/Ritonavir Once Daily and Tenofovir/Emtricitabine Once Daily in Virologically Suppressed HIV-1 Infected subjects With Safety and/or Tolerability Issues on their Present Treatment Regimen.

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 February 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	18 February 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of this study is to estimate the proportion of subjects with HIV 1 RNA <40 copies/millilitre (c/mL) through 24 weeks, following a switch due to treatment related safety and/or tolerability issues, from a regimen consisting of 2 Nucleoside Reverse Transcriptase Inhibitor + any third agent, to a regimen consisting of Atazanavir/ Heat-Stable Ritonavir 300/100 mg once daily (QD) + Raltegravir 400 mg twice daily or a regimen of Atazanavir/Heat-Stable Ritonavir QD and Tenofovir/Emtricitabine QD.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and incompliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial subjects were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 October 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 22
Country: Number of subjects enrolled	Spain: 10
Country: Number of subjects enrolled	United Kingdom: 9
Country: Number of subjects enrolled	France: 20
Country: Number of subjects enrolled	Germany: 21
Country: Number of subjects enrolled	Italy: 12
Country: Number of subjects enrolled	United States: 38
Worldwide total number of subjects	132
EEA total number of subjects	94

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	127
From 65 to 84 years	5
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 132 subjects were recruited at 29 sites in 7 countries.

Pre-assignment

Screening details:

Of 132 subjects enrolled, 109 were randomized to receive treatment, and 23 subjects were not randomized for the following reasons: 10 did not meet study criteria; 5 withdrew consent; 3 were lost to follow-up, and 5 withdrew for other reasons.

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Atazanavir/Ritonavir + Raltegravir

Arm description:

Subjects received atazanavir, 300-mg capsules, and ritonavir, 100-mg tablets, orally once daily and raltegravir, 400-mg tablets, twice daily for 48 weeks.

Arm type	Experimental
Investigational medicinal product name	Atazanavir
Investigational medicinal product code	
Other name	Reyataz
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Atazanavir 300-mg capsule was administered with food once per day in the morning.

Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	Norvir
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Heat-Stable ritonavir 100-mg tablet was administered with food once per day in the morning.

Investigational medicinal product name	Raltegravir
Investigational medicinal product code	
Other name	Isentress
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Raltegravir 400-mg tablet was administered with or without food twice per day.

Arm title	Atazanavir/Ritonavir + Tenofovir/Emtricitabine
------------------	--

Arm description:

Subjects received atazanavir, 300-mg capsules, plus ritonavir, 100-mg tablets, and tenofovir/emtricitabine, 300/200-mg tablets, orally once daily for 48 weeks.

Arm type	Active comparator
----------	-------------------

Investigational medicinal product name	Atazanavir
Investigational medicinal product code	
Other name	Reyataz
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Atazanavir 300-mg capsule was administered with food once per day in the morning.

Investigational medicinal product name	Tenofovir/Emtricitabine
Investigational medicinal product code	
Other name	Truvada
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Tenofovir 300-mg and emtricitabine 200-mg tablets were administered with food once per day in the morning

Investigational medicinal product name	Ritonavir
Investigational medicinal product code	
Other name	Norvir
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Heat-Stable ritonavir 100-mg tablet was administered with food once per day in the morning.

Number of subjects in period 1 ^[1]	Atazanavir/Ritonavir + Raltegravir	Atazanavir/Ritonavir + Tenofovir/Emtricitabine
Started	72	37
Completed	56	32
Not completed	16	5
Consent withdrawn by subject	4	1
Poor compliance/noncompliance	1	1
Subjects request to discontinue	1	-
Adverse event	4	1
Lost to follow-up	2	-
Subjects moved from area	1	-
Subjects began prohibited medication	-	1
Lack of efficacy	3	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of subjects reported in the baseline period are different from the worldwide number enrolled in the trial, as out of 132 subjects only 109 subjects were randomised and treated. 23 subjects discontinued from the study due to various reasons: 10 did not meet study criteria; 5 withdrew consent; 3 were lost to follow-up, and 5 withdrew for other reasons .

End points

End points reporting groups

Reporting group title	Atazanavir/Ritonavir + Raltegravir
Reporting group description: Subjects received atazanavir, 300-mg capsules, and ritonavir, 100-mg tablets, orally once daily and raltegravir, 400-mg tablets, twice daily for 48 weeks.	
Reporting group title	Atazanavir/Ritonavir + Tenofovir/Emtricitabine
Reporting group description: Subjects received atazanavir, 300-mg capsules, plus ritonavir, 100-mg tablets, and tenofovir/emtricitabine, 300/200-mg tablets, orally once daily for 48 weeks.	

Primary: Percentage of Subjects with HIV-1 RNA Level <40 c/mL at Week 24

End point title	Percentage of Subjects with HIV-1 RNA Level <40 c/mL at Week 24 ^[1]
End point description: HIV-1 RNA level was measured with the Abbott m2000rt® polymerase chain reaction assay. Randomized subjects not meeting the criteria for treatment failure (eg, discontinuation of study therapy or virologic rebound at or before Week 24) were considered responders. Virologic rebound was defined as 2 consecutive on-treatment HIV-1 RNA levels ≥ 40 c/mL or the last on-treatment HIV-1 RNA level ≥ 40 c/mL followed by discontinuation. Subjects who experienced treatment failure or had missing Week 24 HIV-1 RNA levels were considered failures. Analysis was performed in 'Intent-To-Treat' population: numerator based on subjects meeting the response criteria, and the denominator based on all randomized subjects and Observed population: numerator based on subjects meeting the response criteria at Week 24 and denominator based on treated subjects with on-treatment HIV-1 RNA measurements at or after Week 24.	
End point type	Primary
End point timeframe: Day 1 up to Week 24	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: As the outcome was descriptive, no statistical testing or treatment comparison was done.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
12 January 2012	<p>1) Changed exclusion criterion to require a history of 2 or more Highly Active Antiretroviral Therapy (HAART) regimens.</p> <p>2) Deleted exclusion criteria: Subjects with no genotypic resistance test prior to starting HAART for the first time and Lactate ≥ 5 mmol/L.</p> <p>3) Modified exclusion criterion to read as "Positive Hepatitis C Virus (HCV) RNA test for HCV or subjects who are currently receiving treatment for HCV or are planning to receive treatment for HCV in the next 6 months.</p> <p>4) Modified exclusion criterion to read as "Platelets $< 50 \times 10^9/L$".</p> <p>5) Updated the description of the use of oral contraceptives. 6) To add information about EU and US approvals of the BMS study NCT00326716 (ClinicalTrials.gov Identifier number) pregnancy study data.</p>
09 July 2012	<p>1) Reduced the sample size of the protocol considering the current enrollment and the screening failure rate. In order to recruit the original sample size of 120 treated subjects, the enrollment period would have to be extended by 1 additional year. Therefore, the sample size was reduced to a minimum of 90 and maximum of 120 treated subjects. This planned reduction in sample size was thought to be enough to provide sufficient robust descriptive data in this population. With the reduction of the total sample size, the sample size for the first interim analysis was also reduced from 60 randomized subjects to 45 randomized subjects who were treated for 12 weeks.</p> <p>2) Removed exclusion criterion: 2 or more HAART regimens prior to current treatment regimen. Subjects with a history of previous HAART switch due to virological failure were still to be excluded from the trial.</p> <p>3) Modified exclusion criterion 2g to allow the inclusion of subjects with positive HCV RNA test for HCV, provided it was not an acute HCV infection and the subject was currently not receiving or not planning to receive treatment for HCV. Efficacy and safety profiles of both atazanavir/ritonavir and raltegravir-based regimens in subjects with chronic HCV and HIV co-infection are well characterized.</p> <p>4) Changed the schedule of lactate measurements to be consistent with current standards of care of lactate assessment in subjects taking antiretroviral agents. Serum lactate was not to be measured in a routine basis at each study visit.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
