

Clinical trial results:

A multi-center, open label, single-arm study to investigate the safety and efficacy of daily oral administration of 2 mg dienogest tablets for the treatment of endometriosis in adolescents over a treatment period of 52 weeks

Summary

EudraCT number	2009-017169-53
Trial protocol	ES FI DE AT FR CZ
Global end of trial date	12 September 2013

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000147-PIP01-07
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 December 2013
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	12 September 2013
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the influence of long-term oral administration of dienogest 2 milligram (mg) once a day, on bone mineral density (BMD) of the spine, measured by dual-energy X-ray absorptiometry (DEXA) in adolescents with confirmed or clinically suspected endometriosis.

Protection of trial subjects:

The procedures set out in this protocol, pertaining to the conduct, evaluation, and documentation of this study, were designed to ensure that the sponsor and investigator abide by Good Clinical Practice guidelines, the Note for Guidance on Clinical Investigation of Medicinal Products in the Paediatric population (International Conference of Harmonization [ICH] topic E11 – Committee for Medicinal Products for Human Use (CHMP)/ICH/2711/99), and under the guiding principles detailed in the Declaration of Helsinki. As applicable according to local regulations, the protocol and all protocol amendments were reviewed and approved by each pertinent Competent Authority. Each subject and legal representative(s) or proxy consentor(s) had ample time and opportunity to ask questions and was informed about the right to withdraw from the study at any time without any disadvantage and without having to provide reasons for this decision. If at any time the subject had doubts or concerns regarding study procedures or investigations, the investigator had to stop the examination and had to take enough time to assess the reason and discuss the willingness of further participation with the subject. The subject entered the study only if the subject and legal representative(s) or proxy consentor(s) voluntarily agreed to sign the informed consent/ assent form and had done so. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug. The design of the study was discussed with and agreed by the Pediatric Committee of the European Medicines Agency.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 March 2011
Long term follow-up planned	Yes
Long term follow-up rationale	Safety
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	Austria: 13
Country: Number of subjects enrolled	Czech Republic: 50
Country: Number of subjects enrolled	Finland: 19
Country: Number of subjects enrolled	France: 5

Country: Number of subjects enrolled	Germany: 16
Worldwide total number of subjects	111
EEA total number of subjects	111

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	111
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 21 study centers in 6 countries: Austria, Czech Republic, Finland, France, Germany, and Spain. Girls from menarche until less than 18 years of age were considered to be appropriate with confirmed or clinically suspected endometriosis were recruited.

Pre-assignment

Screening details:

Out of 120 subjects screened, 111 were assigned to treatment and 9 were listing-only subjects (LOS) who did not receive the treatment. Of these 9 LOS, 8 were screening failures and 1 subject withdrew from the study before start of treatment.

Period 1

Period 1 title	Overall study
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Dienogest (Visanne, BAY86-5258)
-----------	---------------------------------

Arm description:

Subjects received Dienogest tablet orally at a dosage of 2 mg once daily over a period of 52 weeks.

Arm type	Experimental
Investigational medicinal product name	Dienogest
Investigational medicinal product code	BAY86-5258
Other name	Visanne
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Dienogest tablet orally at a dosage of 2 mg once daily over a period of 52 weeks.

Number of subjects in period 1	Dienogest (Visanne, BAY86-5258)
Started	111
Received treatment	111
Entered Follow up period 1	111
Completed treatment	97
Completed	97
Not completed	14
Consent withdrawn by subject	6
Adverse event, non-fatal	5
Noncompliance with study drug	1
Lost to follow-up	1
Lack of efficacy	1

Period 2

Period 2 title	Follow-up period 2
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Dienogest (Visanne, BAY86-5258)
------------------	---------------------------------

Arm description:

Subjects received Dienogest tablet orally at a dosage of 2 mg once daily over a period of 52 weeks.

Arm type	Experimental
Investigational medicinal product name	Dienogest
Investigational medicinal product code	BAY86-5258
Other name	Visanne
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received Dienogest tablet orally at a dosage of 2 mg once daily over a period of 52 weeks.

Number of subjects in period 2^[1]	Dienogest (Visanne, BAY86-5258)
Started	61
Completed	61

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: A total of 111 subjects started Follow-up period 1 (a follow-up assessment of 4 weeks after the end of treatment) out of which 107 subjects completed and reasons for non-completion of 4 subjects were consent withdrawn in 2 subjects and lost to follow-up in 2 subjects. A total of 61 subjects with a decrease in BMD at the end of treatment, started and completed Follow-up period 2 (a follow-up assessment for 26 weeks after the end of treatment).

Baseline characteristics

Reporting groups

Secondary: Percentage of Responders at Week 24

End point title	Percentage of Responders at Week 24
-----------------	-------------------------------------

End point description:

Responders were defined as subjects with reduction in pain intensity from baseline of at least 30% in the Visual Analog Scale (VAS) at Week 24. VAS consisted of a 100 unit long straight line, with verbal anchors at either end, representing a continuum of pain intensity. One end of the line with 0 score as "absence of pain" while the other end of the line with 100 score as "unbearable pain". The assessment of pelvic pain on a VAS was done once every 4 weeks till the end of the treatment (Week 52).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 December 2010	In the initial study protocol, the study phase was termed as "Phase IV". The Austrian Health Authority (AGES) recommended a change of the study phase as "Phase II" in order to increase the focus on the latter aspects of the trial design.
19 May 2011	The following modifications were done in this protocol amendment: 1. Country specific change of inclusion criterion for Finland included study enrolment of 12 – 14 years old adolescents whose diagnosis of endometriosis had been confirmed by laparoscopy 2. Country specific change of requirements to perform gynecological examination in subjects below 15 years of age and written authorization of investigators
16 August 2012	Subjects with a decrease in BMD between baseline and end of treatment were invited for a follow-up scan of 6 months after the end of treatment in order to assess development of BMD after stopping study treatment. Data related to potential confounding parameters (height, weight, diet and medication) were also collected. A newly introduced Visit 17 was only to take place if there was a decrease in the lumbar spine BMD observed between Baseline (Visit 2) and End of Treatment (Visit 15). Introduced with this amendment, additional diagnostic procedures including a further BMD measurement of 12 months after end of treatment, and treatments were initiated as deemed necessary by the investigator.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
