

Clinical trial results:

A Phase IIIb, multicentre, open-label study of nilotinib in adult patients with newly diagnosed Philadelphia chromosome and/or BCR-ABL positive CML in chronic phase

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	07 July 2014
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	07 July 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the rate of molecular response (MR4.0) at 18 months of nilotinib treatment.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 May 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	864
From 65 to 84 years	221
85 years and over	4

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A maximum of 806 patients were planned to be enrolled into the study and were to receive nilotinib 300 mg bid for a duration of up to 24 months.

In order to allow the completion of additional national sub-studies 976 patients were planned to be enrolled.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Nilotinib
-----------	-----------

Arm description:

This was a single-arm study; therefore all participants received nilotinib (AMN107) 300 mg bid given as two 150 mg capsules twice daily.

Arm type	Experimental
Investigational medicinal product name	Nilotinib
Investigational medicinal product code	AMN107
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

nilotinib 300 mg bid given as two 150 mg capsules (to be swallowed whole with a glass of water)

Number of subjects in period 1	Nilotinib
Started	1089
ITT_MR (b2a2 &/or b3a2 +ve pts only)	1056
ITT_CyR (Ph+ patients only)	983
Completed	881
Not completed	208
Adverse event, serious fatal	4
Consent withdrawn by subject	27
Disease progression	17
Abnormal test procedure results	4
Adverse event, non-fatal	117
New cancer therapy	9
Abnormal laboratory values	6
Administrative problems	4

Lost to follow-up	9
Protocol deviation	11

Secondary: Percentage of participants with major molecular response (MMR) at, as well as by, 12 and 24 months

End point title	Percentage of participants with major molecular response			
-----------------	--	--	--	--

(MMR) at, as well as by, 12 and 24 months

End point description:

MMR was defined as BCR-ABL ratio (IS) $\leq 0.1\%$ in a peripheral blood sample. BCR-ABL1 is an abnormal gene found in chronic myeloid leukemia (CML) and acute lymphoblastic leukemia (ALL). The chromosomal defect in the Philadelphia chromosome is a translocation, in which parts of two chromosomes, 9 and 22, swap places. The result is that a fusion gene is created by juxtapositioning the Abl1 gene on chromosome 9 to a part of the BCR ("breakpoint cluster region") gene on chromosome 22. Depending upon the breakpoints on the BCR gene, there are several forms of fusion proteins.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse Events are collected from First Patient First Visit (FPFV) until Last Patient Last Visit (LPLV). All Adverse Events reported in this record are from date of First Patient First Treatment until Last Patient Last Visit

Adverse event reporting additional description:

Consistent with EudraCT disclosure specifications, Novartis has reported under the Serious adverse events field "number of deaths resulting from adverse events" all those deaths, resulting from serious adverse events that are deemed to be causally related to treatment by the investigator.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
19 March 2010	This amendment was a local, country-specific amendment for Germany and Spain. For Germany, the modifications were made in order to allow the switch from study drug to prescription drug in Germany after registration and reimbursement of nilotinib in the study indication. For Spain, a local sub-study to the main protocol was introduced and was described in Post Text Supplement (PTS) 1 which included the rationale and methodology for conducting the sub-study, which aimed to find biological, biochemical and molecular genetics biomarkers, both at the time of diagnosis and during treatment, to allow predicting response to nilotinib in patients with newly diagnosed CML.
11 May 2010	The rationale of Amendment 2 was to specify alternative wording to an existing inclusion
29 June 2010	Amendment 3 clarified a number of definitions, analyses and tests relating to the conduct of the study, specifically addressing the assessments and visits to be performed during the study, and the assessment of the study endpoints.
02 August 2010	Incorporated the changes requested by the German IRB committee into the protocol, Referenced the addition of 10 sub-studies to the core protocol as PTS, which Included biological, biochemical, and molecular genetics biomarkers, Added study the stem cell compartment and analyze the correlation between telomere lengths and response to treatment, Included analysis of nilotinib blood plasma levels during treatment, Added study adherence to treatment and quality of life.
07 October 2010	This local amendment made changes to PTS 4 (a multinational sub-study on the determination of plasma nilotinib levels and single cell quantification of phosphoprotein response during nilotinib treatment in early chronic phase CML). These changes involved: Amendments to the PTS 4 visit schedule table and subsequent alignment of text throughout the document, Amendment of PTS 4 laboratory methodology text.
09 February 2011	The rationale of this substantial global amendment was to Amend the statistical sections to allow for extension of recruitment in order to complete the sub-studies after the completion of the core trial and Clarify the populations for analysis, providing the rationale for the interim analyses and providing further clarity to the analysis of "by" and "at" time points.
25 March 2011	These changes involved: Amendments to the methodology section in PTS 1, Amendments to the sample collection methodology in PTS 6, Removal of reference to a participating country (Belgium) and amendment of text relating to the validation of samples in PTS 7, Amendments to visit schedule and assessments in PTS 9.
25 July 2011	This substantial local amendment was to allow for prolongation of recruitment in Germany in
23 September 2011	To include the new EUTOS prognostic score in the analysis of prognosis at diagnosis
23 January 2012	This local amendment changes involved: Amendments to multiple sections of PTS 10 to revise the text in line with the new working definition of complete molecular response, as introduced in Amendment 9, Amendments to the data collection and data review sections of PTS 11.

23 April 2012	Amendment 11 provided continued access to nilotinib to patients in study CAMN107EIC01 who a) benefitted from treatment with nilotinib and b) who resided in a country in which nilotinib was not yet reimbursed. Study CAMN107EIC01 was designed to treat patients for a duration of 24 months with nilotinib within the context of the study: following completion of 18 months of study treatment (the primary efficacy analysis time point) all patients were scheduled to receive treatment and be followed up for further 6 months. With this amendment Novartis ensured that patients in countries in which Tasigna 150 mg capsules were not yet reimbursed for the treatment of newly diagnosed patients with Ph+ CML CP had continued access to Tasigna if - according to the Investigator's judgment - they benefitted from it. The amendment applied to the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Portugal and Romania. The study duration for patients in these countries was extended beyond 24 months until February 2014, at which time LPLV for study CAMN107EIC01 was scheduled. The patients were to receive commercial drug as soon as the 150 mg capsules were reimbursed in the respective country.
10 January 2013	Amendment 12 provided continued access to nilotinib for patients in study CAMN107EIC01 who a) benefitted from treatment with nilotinib and b) resided in Slovakia or Croatia where nilotinib was not yet reimbursed. Patients were to receive commercial drug as soon as the 150 mg capsules were reimbursed in Slovakia or Croatia. To ensure that legal requirements for prescriptions were met it was added that the prescription of nilotinib exclusively followed the assessment of the patient's individual medical need. Finally, the schedule of assessment for patients who resided in Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Portugal, Slovakia, Croatia and Romania was added.
16 December 2013	To update the efficacy and safety data of nilotinib according to the Investigator's Brochure Edition 9 (June 2013), focusing on the 48 month update of the CAMN107A2303 study in newly diagnosed CML-CP patients and 24 month update of the phase I/II open-label study CAMN107A2101 in CML patients. To prolong the study to guarantee continued access to nilotinib for patients who reside in countries where nilotinib was not reimbursed by end of February 2014 and who were deriving benefit from study treatment according to medical judgment. The overall LPLV was to occur on 30-Jun-2014. In case nilotinib was not yet locally reimbursed by 30-Jun-2014, an alternative program to provide patients with nilotinib was activated in each country according to local regulation. To update the definition of EFS based on the CML management recommendations by European LeukemiaNet (Baccarani et al 2009) and SSMC. To clarify the definition of progression to AP/BC and PFS. Furthermore, changes were made on the statistical sections to better clarify the analysis methods. In addition minor inconsistencies and typos in the protocol were corrected.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
