

Clinical trial results:

A randomized phase III study to compare Bortezomib, Melphalan, Prednisone (VMP) with High Dose Melphalan followed by Bortezomib, Lenalidomide, Dexamethasone (VRD) consolidation and Lenalidomide maintenance in patients with newly diagnosed multiple myeloma

Summary

EudraCT number	2009-017903-28
Trial protocol	NL IS BE DK AT SE IT CZ SK GR PT FI HU LU
Global end of trial date	18 October 2024

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 November 2020
Is this the analysis of the primary completion data?	Yes
Primary completion date	29 October 2020
Global end of trial reached?	Yes
Global end of trial date	18 October 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

- To assess the efficacy of VMP versus high-dose therapy and stem cell transplantation (HDT) in patients with previously untreated multiple myeloma, as measured by the progression free survival.
- To evaluate the effect of consolidation with VRD followed by Lenalidomide maintenance with no consolidation but Lenalidomide maintenance alone on progression free survival.

Protection of trial subjects:

Monitoring and Insurance

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 January 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 356
Country: Number of subjects enrolled	Norway: 29
Country: Number of subjects enrolled	Portugal: 5
Country: Number of subjects enrolled	Sweden: 53
Country: Number of subjects enrolled	Austria: 20
Country: Number of subjects enrolled	Belgium: 29
Country: Number of subjects enrolled	Czechia: 80
Country: Number of subjects enrolled	Denmark: 54
Country: Number of subjects enrolled	Greece: 37
Country: Number of subjects enrolled	Iceland: 2
Country: Number of subjects enrolled	Italy: 718
Country: Number of subjects enrolled	Luxembourg: 1
Country: Number of subjects enrolled	Australia: 17
Country: Number of subjects enrolled	Türkiye: 60
Country: Number of subjects enrolled	Switzerland: 42
Worldwide total number of subjects	1503
EEA total number of subjects	1384

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1417
From 65 to 84 years	86
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

All subjects gave written informed consent and were screened according to the inclusion- and exclusion criteria

Period 1

Period 1 title	Overall period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Arm title	Experimental
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	lenalidomide
Investigational medicinal product code	
Other name	REVLIMID®
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

The recommendations for initial starting doses of REVLIMID® for patients with MM are as follows while maintaining a 21 out of 28 day treatment cycle:

Renal Function (CrCL) | Multiple Myeloma Dose

Mild Renal Impairment ($90 > \text{CrCL} \geq 60 \text{ mL/min}$) | 25 mg (Normal Dose) Every 24 hours

Moderate Renal Impairment ($30 \leq \text{CrCL} < 60 \text{ mL/min}$) | 10 mg Every 24 hours

Severe Renal Impairment ($\text{CrCL} < 30 \text{ mL/min}$, not requiring dialysis) | 15 mg Every 48 hours

End Stage Renal Disease ($\text{CrCL} < 30 \text{ mL/min}$, requiring dialysis) | 5 mg Once daily. On dialysis days the dose should be administered following dialysis

The dose may be escalated to 15 mg every 24 hours after 2 cycles if patient is not responding to treatment and is tolerating the drug.

Investigational medicinal product name	Bortezomib
Investigational medicinal product code	
Other name	VELCADE
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Intravenous bolus use

Dosage and administration details:

The recommended starting dose of bortezomib is 1.3 mg/m² body surface area twice a week for two weeks (administration on days 1, 4, 8 and 11), followed by a 10-day rest period (days 12-21). This three-week period is considered one treatment cycle. There must be at least 72 hours between successive doses of VELCADE. It is recommended that patients with proven complete remission be treated with 2 additional VELCADE cycles after establishing complete remission. It is also recommended that responding patients who do not achieve complete remission be treated with a total of 8 VELCADE cycles. Few data are currently available on re-treatment with VELCADE.

Number of subjects in period 1	Experimental
Started	1503
Completed	0
Not completed	1503
Consent withdrawn by subject	68
Adverse event, non-fatal	309
Other	424
Unknown (Early consent withdrawal)	3
Lack of efficacy	699

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Serious Adverse Events (SAEs) will be reported from the first study-related procedure until 30 days following the last dose of any drug from the protocol treatment schedule or until the start of subsequent systemic therapy for the disease under study.

Assessment type	Systematic

occurrences (all)	869		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 June 2011	AM 1 Italy
03 January 2012	AM 2 The change(s) in this amendment relates to the addition of ROD2 JIT label Lenalidomide.
26 March 2012	AM 1 nordic
30 November 2012	AM 3 addition Quality of life substudy - addition Iron deficiency substudy - addition substudy Evaluation PET scan in young MM patients - duration of follow-up period - criteria measurable disease - modification schedule VCD induction - addition dose adjustments during VCD, VMP and VRD treatment - change in information molecular substudies - addition reporting of Second Primary Malignancies
13 May 2013	AM 4 (protocol v5) The changes in this amendment relate to - removing the 7.5mg and 2.5mg doses of Lenalidomide for dose reduction during the VRD course in case of toxicities - changing the dose reduction schedule of Cyclophosphamide during VCD (removal day 15).

12 March 2014	<p>AM5 (= protocol v 6)</p> <p>change in the duration of a course of Lenalidomide maintenance treatment from 28 days to 21 days</p> <p>change in eligibility criteria of stem cell mobilization</p> <p>clarification of the timelines of randomization relative to the start of VRD/maintenance treatment</p> <p>addition of FISH analysis at progression</p> <p>correction response evaluation</p> <p>clarification of precautions during Bortezomib treatment and Lenalidomide maintenance treatment</p> <p>clarification of dose adjustments of Bortezomib</p> <p>addition of the possibility of crossover from the VMP arm to the HDM arm in case of Bortezomib toxicity during VMP</p> <p>clarification of timelines of bone marrow punctures and response evaluations</p> <p>addition of additional information about the MRD substudy</p> <p>addition of side effects of Bortezomib</p> <p>correction dose of cyclophosphamide and CRAB criteria</p> <p>change local investigator in specified sites</p>
28 November 2014	AM06 Switzerland
06 May 2019	<p>AM07 (Brexit preparations)</p> <p>Change in marketing authorization holder</p> <p>Addition of EU IMP release site</p>
12 February 2020	<p>AM08 (= protocol v 7)</p> <p>-Lenalidomide maintenance treatment is given until progression of disease (previously until relapse/progression)</p> <p>-All patients are followed up to 10 years after registration instead of 7 years</p> <p>- Administrative changes</p>
02 July 2021	<p>AM09 (= protocol v 8)</p> <p>Lenalidomide maintenance treatment is given as an investigational treatment for 10 years. Patients who continue to benefit from this treatment after 10 years continue their maintenance regimens outside of study settings. - - -</p> <p>Additional patient information letter</p> <p>Change of local investigator or independent physician</p> <p>Merger/renaming of hospitals</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
