**Paediatric regulatory details**

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 May 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 February 2021
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To demonstrate the antiviral efficacy of GSK1349572 50 milligrams (mg) once daily compared to Raltegravir (RAL) 400 mg twice daily (BID) both in combination with a background regimen consisting of one to two (1-2) fully active single agents in human immunodeficiency virus-1 (HIV-1) infected, integrase inhibitor-naïve, therapy experienced participants at 48 weeks.

Protection of trial subjects:

Not Applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 October 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 47
Country: Number of subjects enrolled	Australia: 4
Country: Number of subjects enrolled	Belgium: 8
Country: Number of subjects enrolled	Brazil: 125
Country: Number of subjects enrolled	Canada: 4
Country: Number of subjects enrolled	Chile: 25
Country: Number of subjects enrolled	France: 18
Country: Number of subjects enrolled	Greece: 3
Country: Number of subjects enrolled	Hungary: 1
Country: Number of subjects enrolled	Italy: 11
Country: Number of subjects enrolled	Mexico: 41
Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	Romania: 17
Country: Number of subjects enrolled	Russian Federation: 36
Country: Number of subjects enrolled	South Africa: 100
Country: Number of subjects enrolled	Spain: 34
Country: Number of subjects enrolled	Taiwan: 11
Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	United States: 227

Worldwide total number of subjects	719
EEA total number of subjects	93

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	707
From 65 to 84 years	12
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

This study was conducted to demonstrate non-inferior antiviral activity of dolutegravir (DTG) 50 milligram (mg) once daily versus raltegravir (RAL) 400 mg twice daily in participants (pts) with human immunodeficiency viruses (HIV)-1. Long-term antiviral activity, tolerability & safety were also evaluated

### Pre-assignment

Screening details:

1441 pts screened; 724 participants randomized, of which 5 pts did not receive study treatment. 719 participants received at least 1 dose of study medication creating the intent to treat exposed (ITT-E) Population that started the study. 4 pts from 1 closed site removed from ITT-E Population creating modified (m)ITT-E Population(715 pts)

### Period 1

Period 1 title	Double-blind Phase (Up to Week [Wk] 48)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	DTG 50 mg OD

Arm description:

Participants received dolutegravir (DTG) 50 milligrams (mg) once daily (OD) + matching Raltegravir (RAL) placebo twice daily (BID), one in the morning (AM dose) and one in the evening (PM dose) + investigator selected background antiretroviral (ART) therapy for 48 weeks. Participants who successfully completed 48 weeks of treatment continued to have access to DTG in the Open-Label phase of the study.

Arm type	Experimental
Investigational medicinal product name	DTG 50 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received DTG 50 mg OD plus raltegravir placebo BID up to Week 48 during double blind (DB) phase.

<b>Arm title</b>	RAL 400 mg BID
------------------	----------------

Arm description:

Participants received matching DTG placebo OD + RAL 400 mg BID as AM and PM doses + investigator selected background ART therapy for 48 weeks. Participants were discontinued from the study after completion of the Week 48 visit unless a participant successfully completed Week 48 and RAL was not approved and commercially available within the country, GlaxoSmithKline (GSK) continued to supply RAL in the Open-Label Phase until commercially available.

Arm type	Active comparator
Investigational medicinal product name	RAL 400 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received raltegravir 400 mg BID plus DTG placebo OD up to Week 48 during the double blind phase.

<b>Number of subjects in period 1</b>	DTG 50 mg OD	RAL 400 mg BID
Started	357	362
Completed	299	283
Not completed	58	79
Consent withdrawn by subject	11	5
Physician decision	1	1
Site Closed	3	1
Adverse event, non-fatal	4	11
Met Protocol-Defined Stopping Criteria	5	3
Lost to follow-up	5	10
Lack of efficacy	20	42
Protocol deviation	9	6

## Period 2

Period 2 title	Open-label Phase:From Wk 48 up to Wk 480
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

## Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	DTG 50 mg OD

### Arm description:

Participants received dolutegravir (DTG) 50 milligrams (mg) once daily (OD) + matching Raltegravir (RAL) placebo twice daily (BID), one in the morning (AM dose) and one in the evening (PM dose) + investigator selected background antiretroviral (ART) therapy for 48 weeks. Participants who successfully completed 48 weeks of treatment continued to have access to DTG in the Open-Label phase of the study.

Arm type	Experimental
Investigational medicinal product name	DTG 50 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

### Dosage and administration details:

Participants continued to receive DTG 50 mg OD in the open label phase

<b>Arm title</b>	RAL 400 mg BID
------------------	----------------

### Arm description:

Participants received matching DTG placebo OD + RAL 400 mg BID as AM and PM doses + investigator selected background ART therapy for 48 weeks. Participants were discontinued from the study after completion of the Week 48 visit unless a participant successfully completed Week 48 and RAL was not approved and commercially available within the country, GlaxoSmithKline (GSK) continued to supply

RAL in the Open-Label Phase until commercially available.

Arm type	Active comparator
Investigational medicinal product name	RAL 400 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants continued to receive RAL 400 mg BID in the open label phase.

<b>Number of subjects in period 2<sup>[1]</sup></b>	DTG 50 mg OD	RAL 400 mg BID
Started	295	126
Completed	227	109
Not completed	68	17
Adverse event, serious fatal	4	1
Consent withdrawn by subject	6	3
Physician decision	5	-
Adverse event, non-fatal	2	-
Met Protocol-Defined Stopping Criteria	2	-
Lost to follow-up	12	2
Lack of efficacy	27	11
Protocol deviation	10	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: For DTG arm: 4 pts completed DB Phase but did not enter OLP and for RAL arm: 157 pts completed DB Phase but did not enter OLP

## Baseline characteristics

### Reporting groups

Reporting group title	Double-blind Phase (Up to Week [Wk] 48)
Reporting group description:	
Participants were randomized to 1:1 ratio to receive dolutegravir (DTG) 50 milligram (mg) once daily or raltegravir (RAL) 400 mg twice daily for 48 Weeks	

Reporting group values	Double-blind Phase (Up to Week [Wk] 48)	Total	
Number of subjects	719	719	
Age categorical			
Baseline Characteristic data are reported for members of the modified Intent-To-Treat Exposed Population, all randomized participants who received at least one dose of IP excluding four participants at one site, which was closed due to Good Clinical Practice (GCP) non-compliance issues in another ViiV sponsored trial			
Units: Participants			
18-64 years	707	707	
From 65-84 years	12	12	
Gender categorical			
Baseline Characteristic data are reported for members of the modified Intent-To-Treat Exposed Population, all randomized participants who received at least one dose of IP excluding four participants at one site, which was closed due to Good Clinical Practice (GCP) non-compliance issues in another ViiV sponsored trial.			
Units: Subjects			
Female	230	230	
Male	485	485	
Missing	4	4	
Race/Ethnicity, Customized			
Baseline Characteristic data are reported for members of the modified Intent-To-Treat Exposed Population, all randomized participants who received at least one dose of IP excluding four participants at one site, which was closed due to Good Clinical Practice (GCP) non-compliance issues in another ViiV sponsored trial.

## Statistical analyses

<b>Statistical analysis title</b>	Statistical Analysis 1
Statistical analysis description:	
Analysis was adjusted for the BL stratification factors: HIV-1 RNA ( $\leq 50000$ versus [vs] $> 50000$ c/mL), darunavir-ritonavir use without primary protease inhibitor mutations (yes vs no), and phenotypic susceptibility score (2 vs $< 2$ ) to background regimen.	
Comparison groups	DTG 50 mg OD v RAL 400 mg BID
Number of subjects included in analysis	715
Analysis specification	Pre-specified
Analysis type	non-inferiority <sup>[3]</sup>
P-value	= 0.03 <sup>[4]</sup>
Method	Cochran-Mantel-Haenszel
Parameter estimate	Difference in percentage
Point estimate	7.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.7
upper limit	14.2

Notes:

[3] - Non-inferiority of DTG 50 mg and RAL at Week 48 can be concluded if the lower bound of a two-sided 95% confidence interval (CI) for the difference in percentages (DTG - RAL) is greater than -12%. If non-inferiority were established, superiority would be tested at the nominal 5% level based on a pre-specified testing procedure.

[4] - P-value is for test of superiority. Adjusted difference in proportion which is based on the difference in percentage, adjusted for Baseline (BL) stratification factors.

## Secondary: Number of participants (par.) with detectable virus that has genotypic or phenotypic evidence of treatment-emergent integrase inhibitor (INI) resistance at time of protocol defined virology failure (PDVF)

End point title	Number of participants (par.) with detectable virus that has genotypic or phenotypic evidence of treatment-emergent integrase inhibitor (INI) resistance at time of protocol defined virology failure (PDVF)
-----------------	--

End point description:

For par. meeting one of the criteria for PDVF, plasma samples collected at the time point of virologic failure and Baseline were tested to evaluate any potential genotypic and/or phenotypic evolution of resistance. PDVF was defined as (A) virologic non-response: a decrease in plasma HIV-1 RNA of  $< 1$  logarithm to base 10 ( $\log_{10}$ ) copies/mL by Week 16, with subsequent confirmation, unless plasma HIV-1 RNA is  $< 400$  copies/mL; confirmed plasma HIV-1 RNA levels  $\geq 400$  copies/mL on or after Week 24 or (B) virologic rebound: confirmed rebound in plasma HIV-1 RNA levels to  $\geq 400$  copies/mL after prior confirmed suppression to  $< 400$  copies/mL; confirmed plasma HIV-1 RNA levels  $> 1 \log_{10}$  copies/mL above the nadir value, where nadir is  $\geq 400$  copies/mL. Treatment-emergent IN mutations are those detected at the time of PDVF but not at Baseline.

## Statistical analyses

No statistical analyses for this end point

### Secondary: Number of participants with post-Baseline emergent Grade 1 to 4 clinical chemistry and hematology toxicities

End point title	Number of participants with post-Baseline emergent Grade 1 to 4 clinical chemistry and hematology toxicities
-----------------	--

End point description:

All Grade 1 to 4 post-Baseline-emergent chemistry toxicities included alanine aminotransferase (ALT), albumin, alkaline phosphatase (ALP), aspartate aminotransferase (AST), carbon dioxide (CO<sub>2</sub>) content/bicarbonate, cholesterol, creatine kinase (CK), creatinine, hyperglycemia, hyperkalemia, hypernatremia, hypoglycemia, hypokalemia, hyponatremia, low density lipoprotein (LDL) cholesterol calculation, lipase, total bilirubin, and triglycerides. All Grade 1 to 4 post-Baseline-emergent hematology toxicities included hemoglobin, platelet count, total neutrophils, and white blood cell count. The Division of AIDS (DAIDS) defined toxicity grades as follows: Grade 1, mild; Grade 2, moderate; Grade 3, severe; Grade 4, potentially life threatening; Grade 5, death. Higher the grade, more severe the symptoms. Safety Population: All pts who received at least 1 dose of IP (i.e., DTG or RAL)

End point type	Secondary
----------------	-----------

End point timeframe:

From Baseline (Day 1) until Week 48, including participants with post-treatment events occurring after Week 48 for participants not entering the post-Week 48 Open-Label phase of the study

## Statistical analyses

No statistical analyses for this end point

## Secondary: Number of participants with post-Baseline Emergent Grade 1 to 4 Clinical Chemistry and Hematology Toxicities

End point title	Number of participants with post-Baseline Emergent Grade 1 to 4 Clinical Chemistry and Hematology Toxicities
-----------------	--

End point description:

Blood samples were collected for the analysis of clinical chemistry and hematology parameters: Alanine aminotransferase (ALT), albumin, alkaline phosphate (ALP), aspartate aminotransferase (AST), carbon dioxide (CO2) content/bicarbonate, cholesterol, creatine kinase (CK), creatinine, hyperglycemia, hyperkalemia, hyponatremia, hypoglycemia, hypokalemia, hyponatremia, LDL cholesterol, lipase, total bilirubin, triglycerides, hemoglobin, neutrophils, platelets, white blood cells. Any abnormality in clinical chemistry and hematology parameters were evaluated according to the DAIDS toxicity scale From Grade 1 to 4: Grade 1 (mild), Grade 2 (moderate), Grade 3 (severe) and Grade 4 (Potentially life-threatening). Higher the grade, more severe the symptoms. Only those participants who completed Week 48 and continued into open-label phase were included in this analysis.

## Secondary: Change From Baseline in European Quality of Life-5 Dimensions-3 Levels (EQ-5D-3L) Utility Score

End point title	Change From Baseline in European Quality of Life-5 Dimensions-3 Levels (EQ-5D-3L) Utility Score
-----------------	---

End point description:

The EQ-5D-3L questionnaire provides a profile of participant function and a global health state rating. The five-item measure has one question assessing each of five dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression and 3 levels for each dimension including 1=no problems, 2=some problems, 3=extreme problems. The health state is defined by combining the levels of answers from each of the 5 questions. Each health state is referred to in terms of a 5 digit code. Health state 5 digit code is translated into utility score, which is valued up to 1 (perfect health) with lower values meaning worse state. EQ-5D-3L utility score ranges from -0.594 to 1. Higher scores indicate better health. Baseline was the latest pre-dose assessment value (Day 1) and change from Baseline=post-dose value minus Baseline value.

### Reporting groups

Reporting group title	RAL~400mg BID
-----------------------	---------------

Reporting group description:

Participants received matching DTG placebo OD + RAL 400 mg BID as AM and PM doses + investigator selected background ART therapy for 48 weeks. Participants were discontinued from the study after completion of the Week 48 visit unless a participant successfully completed Week 48 and RAL was not approved and commercially available within the country, GSK continued to supply RAL in the Open-Label Phase until it was commercially available.

Reporting group title	DTG~50mg QD
-----------------------	-------------

Reporting group description:

Participants received dolutegravir (DTG) 50 milligrams (mg) once daily (OD) + matching Raltegravir (RAL) placebo twice daily (BID), one in the morning (AM dose) and one in the evening (PM dose) + investigator selected background antiretroviral (ART) therapy for 48 weeks. Participants who successfully completed 48 weeks of treatment continued to have access to DTG in the Open-Label phase of the study.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 October 2010	Amendment 1: Country Specific Amendment for the United Kingdom
14 January 2011	Amendment 2: Primary reasons for this amendment include the addition of a Week 2 visit for all participants, and reference to an independent data monitoring committee (IDMC) which will regularly review targeted safety information; text was also added to allow use of entecavir for treatment of hepatitis B in appropriate clinical situations; minor clarifications and corrections have also been incorporated.
15 April 2011	Amendment 3: Country Specific Amendment for South Africa
29 August 2011	Amendment 4: Primary reasons for this amendment include: allowing the use of historical resistance test result in participants off antiretroviral therapy (ART) for at least one month to determine eligibility, adding text for rash management; text added for withdrawal based on new rash management wording; modification of text on decline in renal function; adding syphilis screening, drugs of abuse (including alcohol) screening, and serum cetaminophen test to liver event follow-up assessments; adding possible Week 24 group-sequential analysis; clarification regarding Missing, Switch or Discontinuation=Failure (MSDF) algorithm; change for hepatitis B and C serology collection at Screening versus (vs) current Day 1 collection; allow co-administration of fosamprenavir with investigational products; unknown impact on efficacy if multivitamin/iron supplements are used with other medications that may decrease GSK1349572 exposure; and adding exceptions to Child Pugh Classification for anticoagulation therapy and use of atazanavir in failing background therapy; and updated section on publication of study results
09 September 2011	Amendment 5: This amendment is implemented to correct a formatting error in the Inclusion Criteria (Inclusion criteria #4 was incorrectly split into #4 and #5 when Amendment 04 was published); a couple minor clarifications are also included.
22 March 2012	Amendment 6: This amendment is implemented to update the prohibited medication information (rifabutin, pioglitazone, troglitazone, modafinil deleted; rifapentine added; text edited for glucocorticoids and immunomodulators); to allow a change in background therapy after Week 48 if required for tolerability/toxicity management; to allow the use of telbivudine for hepatitis B treatment; to add guidance for electronic case report form (eCRF) collection for missing visits and for reporting participants as lost to follow-up; to allow the use of pill boxes for up to 7 days; to provide clarification of when repeat pharmacokinetic (PK) samples should be collected for Week 24 and Week 48; and to inform that a group-sequential analysis is no longer planned for the study. Details regarding the medical monitor are also added. There is also a minor clarification regarding drug formulation and correction of a typographical error
09 October 2012	Amendment 7: Country Specific Amendment for South Africa
21 February 2013	Amendment 8: This amendment was implemented to allow GSK1349572 50 mg twice daily dosing for participants receiving efavirenz, tipranavir/ritonavir, rifampin, or rifapentine; updated drug drug interaction section; rifampin and rifapentine were also removed from the prohibited medication listing; abbreviation listing and references updated.

19 May 2015	Amendment 9: Country Specific Amendment for South Africa
10 July 2018	Amendment 10: Changes were made to the protocol to manage and mitigate risks following identification of a potential safety issue related to neural tube defect in infants born to women with exposure to dolutegravir at the time of conception. The Risk Assessment table was updated to include language regarding risk and mitigation of neural tube defects. Inclusion criterion #2 was updated to exclude the double barrier method of contraception, which does not meet updated GSK/ViiV criteria for a highly effective method. The withdrawal criteria were updated to include a reminder that females of reproductive potential who change their minds and desire to be pregnant, or who state they no longer are willing to comply with the approved pregnancy avoidance methods, should also be withdrawn from the study. The Time and Events table was updated to include a reminder for investigators to check at every visit that females of reproductive potential are avoiding pregnancy. Administrative updates were made.

Notes:

---

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

None reported
