Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	06 March 2014
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 March 2014
Global end of trial reached?	Yes
Global end of trial date	06 March 2014
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The aim of the study is to determine the efficacy and safety of BHR-100 i.v. progesterone infusion compared to placebo infusion, utilizing the glasgow outcome scale (GOS) in severe traumatic brain injury patients, glasgow coma scale (GCS 3-8), with the treatment administered continuously over 5 days beginning within 8 hours after the injury. In addition, the safety and clinical benefit of BHR-100 treatment will be assessed through the secondary endpoints.

Protection of trial subjects:

Subjects were managed in accordance with standard guidelines for the treatment of severe TBI (Brain Trauma Foundation, American Brain Injury Consortium, and European Brain Injury Consortium).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 July 2010
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 64
Country: Number of subjects enrolled	China: 35
Country: Number of subjects enrolled	Israel: 62
Country: Number of subjects enrolled	Malaysia: 19
Country: Number of subjects enrolled	Romania: 6
Country: Number of subjects enrolled	Russian Federation: 13
Country: Number of subjects enrolled	Singapore: 15
Country: Number of subjects enrolled	Thailand: 46
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	United States: 439
Country: Number of subjects enrolled	Netherlands: 7
Country: Number of subjects enrolled	Spain: 93
Country: Number of subjects enrolled	United Kingdom: 54
Country: Number of subjects enrolled	Austria: 32
Country: Number of subjects enrolled	Belgium: 29
Country: Number of subjects enrolled	Czechia: 58
Country: Number of subjects enrolled	Finland: 6
Country: Number of subjects enrolled	France: 92
Country: Number of subjects enrolled	Germany: 50

Country: Number of subjects enrolled	Hungary: 8
Country: Number of subjects enrolled	Italy: 46
Worldwide total number of subjects	1179
EEA total number of subjects	427

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	24
Adults (18-64 years)	1089
From 65 to 84 years	66
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

In total, 1195 subjects were randomized, however 16 subjects never received study drug and therefore the 1179 who received study drug were considered enrolled. All tables of the mITT population reflect only subjects who were randomized and received study drug treatment.

Pre-assignment

Screening details:

Inclusion and exclusion

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	BHR-100

Arm description:

Progesterone: Intravenous administration of 0.71mg/kg/hr for 1hr followed by 0.5mg/kg/hr administered intravenously for an additional 119 hrs.

Arm type	Experimental
Investigational medicinal product name	Progesterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Intravenous drip use

Dosage and administration details:

Intravenous administration of 0.71mg/kg/hr for 1hr followed by 0.5mg/kg/hr administered intravenously for an additional 119 hrs

Arm title	Placebo
------------------	---------

Arm description:

Lipid emulsion without progesterone: Intravenous administration equal to 0.71mg/kg/hr for 1hr followed by 0.5mg/kg/hr administered intravenously for an additional 119 hrs.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Drug: Lipid emulsion without progesterone

Intravenous administration equal to 0.71mg/kg/hr for 1hr followed by 0.5mg/kg/hr administered intravenously for an additional 119 hrs.

Number of subjects in period 1	BHR-100	Placebo
Started	591	588
Completed	458	473
Not completed	133	115
Adverse event, serious fatal	109	91
Consent withdrawn by subject	7	5
Physician decision	-	4
Adverse event, non-fatal	-	1
Lost to follow-up	17	14

Secondary: Short Form (36) Health Survey (SF-36)

End point title	Short Form (36) Health Survey (SF-36)
-----------------	---------------------------------------

End point description:

The SF-36 is a validated survey of patient health consisting of eight scaled scores. The eight sections are:

- vitality
- physical functioning
- bodily pain
- general health perceptions
- role physical
- role emotional
- role mental

- mental health The 8 scales can also be further summarized to provide a summary score for physical health and a summary score for mental health.

End point type	Secondary
End point timeframe:	
3 months and 6 months post injury

Secondary: Potentially Clinically Important On-Treatment Cerebral Perfusion Pressure (CPP) and Summary of Maximum Therapy Therapeutic Intensity Level (TIL)

End point title	Potentially Clinically Important On-Treatment Cerebral Perfusion Pressure (CPP) and Summary of Maximum Therapy Therapeutic Intensity Level (TIL)
-----------------	--------------------------------------------------------------------------------------------------------------------------------------------------

End point description:

Cerebral Perfusion Pressure (CPP) levels are presented according to clinically significant cut-off values. CPP was calculated from intracranial pressures and mean arterial pressures measured from Day through Day 6 after initiation of study medication, if an ICP monitor was in place. Specific therapies received during Days 1-6 are summarized according to the Therapeutic Intensity Level (TIL) by treatment group, as maximum level of therapy administered to the subject.

End point type	Secondary
End point timeframe:	
Admission through post-infusion Day 6

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

16 pts haven't received study drugs. 6 BHR-100, 10 placebo. 1179 made the mITT population (591+588). Data isn't available for causality of deaths. Feedback from EudraCT IT on 20-01-2026, we have entered '0' for the deaths values that weren't reported.

Notes:
