

Clinical trial results:

A Phase 3 Randomized, Double Blind, Placebo Controlled Study to Determine the Safety and Efficacy of Romiplostim in Thrombocytopenic Pediatric Subjects with Immune Thrombocytopenia (ITP)

Summary

EudraCT number	2010-018426-39
Trial protocol	Outside EU/EEA
Global end of trial date	19 February 2015

Results information

Result version number	v1 (current)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000653-PIP01-09
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 February 2015
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 February 2015
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to evaluate the efficacy of romiplostim in the treatment of thrombocytopenia in pediatric subjects with immune thrombocytopenia (ITP) as measured by durable platelet response.

Protection of trial subjects:

This study was conducted in accordance with the United States Food and Drug Administration (FDA) and International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines. All subjects provided written informed consent before undergoing any study-related procedures, including screening procedures.

The study protocol, amendments, and the informed consent form (ICF) were reviewed by the Institutional Review Boards (IRBs) and Independent Ethics Committees (IECs). No subjects were recruited into the study and no investigational product (IP) was shipped until the IRB/IEC gave written approval of the protocol and ICF and Amgen received copies of these approvals.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 January 2012
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Australia: 6
Country: Number of subjects enrolled	United States: 49
Worldwide total number of subjects	62
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	39

Adolescents (12-17 years)	23
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 27 centers in the United States, Canada, and Australia.

Pre-assignment

Screening details:

Subjects who met eligibility criteria were enrolled and stratified by the following 3 age categories: ≥ 1 to < 6 years; 6 to < 12 years; and 12 to < 18 years.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received weekly subcutaneous placebo for 24 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Matching placebo administered once a week by subcutaneous injection

Arm title	Romiplostim
------------------	-------------

Arm description:

Participants received once weekly subcutaneous romiplostim for 24 weeks at a starting dose of 1 $\mu\text{g/kg}$; weekly dose increases continued in increments of 1 $\mu\text{g/kg/week}$ to a maximum dose of 10 $\mu\text{g/kg}$ in an attempt to reach a target platelet count of $\geq 50 \times 10^9/\text{L}$.

Arm type	Experimental
Investigational medicinal product name	Romiplostim
Investigational medicinal product code	AMG 531
Other name	Nplate
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered weekly as a subcutaneous injection.

Number of subjects in period 1	Placebo	Romiplostim
Started	20	42
Received Treatment	19	42
Completed	18	41
Not completed	2	1
Consent withdrawn by subject	2	-
Ineligibility determined	-	1

End points

End points reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants received weekly subcutaneous placebo for 24 weeks.	
Reporting group title	Romiplostim
Reporting group description:	
Participants received once weekly subcutaneous romiplostim for 24 weeks at a starting dose of 1 µg/kg; weekly dose increases continued in increments of 1 µg/kg/week to a maximum dose of 10 µg/kg in an attempt to reach a target platelet count of $\geq 50 \times 10^9/L$.	

Primary: Percentage of Participants with a Durable Platelet Response

End point title	Percentage of Participants with a Durable Platelet Response
End point description:	
A participant with durable platelet response was defined as achieving at least 6 weekly platelet counts of $\geq 50 \times 10^9/L$ during the last 8 weeks of treatment (platelet counts obtained from week 18 to week 25). If a platelet count from a participant was not available (missing) in a certain week, that week was imputed as non-response for that participant. Platelet counts were not deemed as a positive response for 4 weeks after the administration of rescue medication.	
End point type	Primary
End point timeframe:	
Week 18 to week 25	

End point values	Placebo	Romiplostim		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	20 ^[1]	42 ^[2]		
Units: percentage of participants				
number (confidence interval 95%)	10 (1.2 to 31.7)	52.4 (36.4 to 68)		

Notes:

[1] - Efficacy analysis set includes all randomized subjects

[2] - Efficacy analysis set includes all randomized subjects

Statistical analyses

Statistical analysis title	Primary Analysis
Statistical analysis description:	
The incidence of durable platelet response was compared by the Cochran-Mantel-Haenszel test stratified by the baseline age group. The Mantel-Haenszel common odds ratio (romiplostim vs placebo) was estimated along with its 95% confidence interval.	
Comparison groups	Placebo v Romiplostim

Number of subjects included in analysis	62
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0018 ^[3]
Method	Cochran-Mantel-Haenszel
Parameter estimate	Odds ratio (OR)
Point estimate	9.0497
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.896
upper limit	43.199

Notes:

[3] - p-value from Cochran-Mantel-Haenszel test stratified by baseline age group.

Secondary: Percentage of Participants with an Overall Platelet Response

End point title	Percentage of Participants with an Overall Platelet Response
End point description:	
Overall platelet response is defined as either a durable platelet response or transient platelet response. Durable platelet response was defined as weekly platelet count $\geq 50 \times 10^9/L$ for 6 or more times for Weeks 18-25 measurements. Subjects may not have a weekly response within 4 weeks after receiving any rescue medication. Transient platelet response was defined as weekly platelet count $\geq 50 \times 10^9/L$ for 4 or more times during Weeks 2-25 measurements but without durable platelet response. Subjects may not have a weekly response within 4 weeks after receiving any rescue medications.	
End point type	Secondary
End point timeframe:	
Week 2 to week 25

lower limit	0.277
upper limit	2.391

Notes:

[6] - p-value from Cochran-Mantel-Haenszel test stratified by baseline age group

Secondary: Number of Composite Bleeding Episodes

End point title	Number of Composite Bleeding Episodes
-----------------	---------------------------------------

End point description:

A composite bleeding episode was defined as clinically significant bleeding events or the use of a rescue medication to prevent a clinical significant bleeding event during weeks 2 through 25 of the treatment period. A clinically significant bleeding event was defined as a Common Terminology Criteria for Adverse Events (CTCAE) version 3.0 grade ≥ 2 bleeding event.

End point type	Secondary
----------------	-----------

End point timeframe:

25 weeks

End point values	Placebo	Romiplostim		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	20	42		
Units: composite bleeding episodes				
arithmetic mean (standard deviation)	4 (\pm 6.9)	1.9 (\pm 4.2)		

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with Adverse Events

End point title	Number of Participants with Adverse Events
-----------------	--

End point description:

A serious adverse event is defined as an adverse event that meets at least 1 of the following serious criteria:

- fatal,
- life threatening (places the subject at immediate risk of death),
- requires in-patient hospitalization or prolongation of existing hospitalization,
- results in persistent or significant disability/incapacity,
- congenital anomaly/birth defect, and/or
- other significant medical hazard.

Adverse events were graded for severity according to the CTCAE version 3.0 grading scale, where Grade 3 = moderate, Grade 4 = life-threatening and Grade 5 = fatal.

Treatment-related adverse events (TRAEs) were those assessed by the investigator as possibly related to study drug. This relationship was determined by a "yes" or "no" response to the question: "Is there a reasonable possibility that the event may have been caused by study drug?"

End point type	Secondary
----------------	-----------

End point timeframe:

From the first dose of study drug until 4 weeks after last dose; 28 weeks.

End point values	Placebo	Romiplostim
