

Clinical trial results:

A Dose-Ranging And Efficacy Study of LY2439821 (An Anti-IL-17 Antibody) In Patients With Moderate-To-Severe Psoriasis

Summary

EudraCT number	2010-018948-14
Trial protocol	DK
Global end of trial date	02 August 2016

Results information

Result version number	v1 (current)
This version publication date	18 August 2017
First version publication date	18 August 2017

Trial information

Trial identification

Sponsor protocol code	I1F-MC-RHAJ

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 August 2016
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 August 2016
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary purpose for this study is to help answer the following research questions

- The safety of ixekizumab (LY2439821) and any side effects that might be associated with it.
- Whether ixekizumab can help participants with Psoriasis.
- How much ixekizumab should be given to participants.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 April 2010
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	5 Years
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 3
Country: Number of subjects enrolled	United States: 139
Worldwide total number of subjects	142
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	134
From 65 to 84 years	8
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study has 3 parts: Part A is a randomized, double-blind, placebo-controlled, parallel-group, dose ranging design (approximately 20-40 weeks [wks]). Treatment durability (sustained efficacy off treatment) from Week 20 up to Week 32 was evaluated during Part A.

Pre-assignment

Screening details:

Part B is an optional extension period with an open-label design (approximately 240 weeks). Part C is an additional optional extension period with an open-label design (up to approximately 104 weeks).

Period 1

Period 1 title	Part A
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Part A:

Placebo given on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo given on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm title	10 mg ixekizumab
------------------	------------------

Arm description:

Part A:

10 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm type	Experimental
Investigational medicinal product name	ixekizumab
Investigational medicinal product code	
Other name	LY2439821, Taltz
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

10 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm title	25 mg ixekizumab
------------------	------------------

Arm description:

Part A:

25 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm type	Experimental
Investigational medicinal product name	Ixekizumab
Investigational medicinal product code	
Other name	LY2439821,Taltz
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

25 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm title	75 mg ixekizumab
------------------	------------------

Arm description:

Part A:

75 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm type	Experimental
Investigational medicinal product name	Ixekizumab
Investigational medicinal product code	
Other name	LY2439821,Taltz
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

75 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm title	150 mg ixekizumab
------------------	-------------------

Arm description:

Part A:

150 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Arm type	Experimental
Investigational medicinal product name	Ixekizumab
Investigational medicinal product code	
Other name	LY2439821,Taltz
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

150 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

Number of subjects in period 1	Placebo	10 mg ixekizumab	25 mg ixekizumab
Started	27	28	30
Received at Least 1 Dose of Study Drug	27	28	30
Completed	22	21	29
Not completed	5	7	1
Consent withdrawn by subject	3	3	-
Adverse event, non-fatal	1	2	1
Lost to follow-up	-	1	-
Lack of efficacy	1	-	-
Protocol deviation	-	1	-

Number of subjects in period 1	75 mg ixekizumab	150 mg ixekizumab
Started	29	28
Received at Least 1 Dose of Study Drug	29	28
Completed	26	27
Not completed	3	1
Consent withdrawn by subject	3	1
Adverse event, non-fatal	-	-
Lost to follow-up	-	-
Lack of efficacy	-	-
Protocol deviation	-	-

Period 2

Period 2 title	Part B and C
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Arms

Arm title	120 mg/80 mg Total Ixekizumab
Arm description:	
Part B: (optional) 120 mg ixekizumab given SC Q4W. Subsequent to an amendment on May 2012, administration changed to 80 mg Q4W through Week 236.	
Part C: (optional) 80 mg ixekizumab given SC Q4W through week 344.	
Part C was stopped once ixekizumab became available through marketing authorization. Only participants with neutropenia entered the post treatment safety visits. No participants completed the study as Part C was stopped.	
Arm type	Experimental
Investigational medicinal product name	Ixekizumab
Investigational medicinal product code	
Other name	LY2439821,Taltz
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Part B: (optional)

120 mg ixekizumab given SC Q4W. Subsequent to an amendment on May 2012, administration changed to 80 mg Q4W through Week 236.

Part C: (optional)

80 mg ixekizumab given SC Q4W through week 344.

Note: The pharmaceutical form of drug in the first part of Part B was powder for solution for injection.

Number of subjects in period 2^[1]	120 mg/80 mg Total Ixekizumab
Started	120
Completed Part B (Week 240)	74
Completed Part C	0
Post Treatment Safety Visits	6
Completed	0
Not completed	120
Inclusion/Exclusion Criteria Not Met	1
Physician decision	3
Consent withdrawn by subject	16
Clinical Relapse	4
Adverse event, non-fatal	12
Sponsor Decision	66
Lost to follow-up	10
Lack of efficacy	7

Protocol deviation	1
--------------------	---

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: 80 and 120 mg ixekizumab were only administered during Part B and C. Not all participants that participated in Part A moved to Part B and C.

Baseline in Psoriasis Area and Severity Index (PASI)			
PASI combines the extent of body surface involvement in 4 anatomical regions (head, trunk, arms, and legs). For each region the percent area of skin involved was estimated from 0 (0%) to 6 (90%-100%) and severity was estimated by clinical signs of erythema, induration and scaling with a scores range from 0 (none) to 4 (very severe). Final PASI calculated as: sum of severity parameters for each region * area score * weighing factor (head [0.1], upper limbs [0.2], trunk [0.3], lower limbs [0.4]).Overall scores range from 0 (no psoriasis) to 72(the most severe disease).			
Units: units on a scale arithmetic mean standard deviation	16.45 ± 5.26	19.18 ± 7.96	18.55 ± 4.94

Part C: (optional)

80 mg ixekizumab given SC Q4W through week 344.

Part C was stopped once ixekizumab became available through marketing authorization.

Only participants with neutropenia entered the post treatment safety visits.

No participants completed the study as Part C was stopped.

Subject analysis set title	All Participants on Ixekizumab(10mg,25mg,75mg &150mg)
----------------------------	---

Subject analysis set type	Full analysis
---------------------------	---------------

Subject analysis set description:

The population pharmacokinetic (PK) modeling value for systemic clearance was based on data from week 1 to week 32 for all participants in all ixekizumab treatment arms.

10 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

25 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

75 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations.

150 mg ixekizumab given SC on weeks 0, 2, 4, 8, 12 and 16 for a total of six administrations

Analysis Population Description (APD): All randomized participants who received at least 1 dose of study drug and had evaluable PK data.

Primary: Percentage of Participants Achieving Psoriasis Area and Severity Index $\geq 75\%$ (PASI 75) Improvement

End point title	Percentage of Participants Achieving Psoriasis Area and Severity Index $\geq 75\%$ (PASI 75) Improvement
-----------------	--

End point description:

PASI combines the extent of body surface involvement in 4 anatomical regions (head, trunk, arms and legs). For each region the percent area of skin involved was estimated from 0 (0%) to 6 (90% - 100%) and severity was estimated by clinical signs of erythema, induration and scaling with a scores range from 0 (none) to 4 (very severe). Each area is scored separately and the scores then combined for the final PASI. Final PASI calculated as: sum of severity parameters for each region * area score * weighing factor (head [0.1], upper limbs [0.2], trunk [0.3], lower limbs [0.4]). Overall scores range from 0 (no psoriasis) to 72 (the most severe disease). Participants achieving PASI 75 were defined as having an improvement of $\geq 75\%$ in the PASI score compared to baseline.

APD: All randomized participants who received at least 1 dose of study drug and had at least 1 post-baseline PASI assessment. Last Observation Carried Forward (LOCF) was used to impute missing post-baseline values.

Secondary: Percentage of Participants With a Static Physician's Global Assessment (sPGA) Score of Cleared (0) or Minimal (1) With at Least a 2 Point Improvement" at Week 12

End point title	Percentage of Participants With a Static Physician's Global Assessment (sPGA) Score of Cleared (0) or Minimal (1) With at Least a 2 Point Improvement" at Week 12
-----------------	---

End point description:

The sPGA of psoriasis is scored on a 6-point scale, reflecting a global consideration of the erythema, induration, and scaling across all psoriatic lesions. Average erythema, induration, and scaling are scored separately over the whole body according to a 6 point severity scale (0 [clear] to 5 [severe]). The total score was calculated as average of the 3 severity scores and rounded to the nearest whole number score to determine the sPGA score and category (0=clear; 1=minimal; 2=mild; 3=moderate; 4=marked; 5 = severe). As defined by protocol, a responder is a participant who has a post-baseline sPGA score of '0' or a post-baseline score of '1' with at least a 2 point improvement from baseline.

APD:All randomized participants who received at least 1 dose of study drug and had at least 1 post-

baseline PASI assessment. Last Observation Carried Forward (LOCF) was used to impute missing post-baseline values.

Secondary: Change from Baseline in Hospital Anxiety and Depression Scale (HADS) Score at Week 16

End point title	Change from Baseline in Hospital Anxiety and Depression Scale (HADS) Score at Week 16
-----------------	---

End point description:

The HADS is a 14-item, participant self-reported scale that consists of an anxiety scale and a depression scale, each with 7 items. Items are rated on a 4-point Likert-type scale ranging from 0 (low level of anxiety or depression) to 3 (high level of anxiety or depression). Each subscale score ranges from 0 to 21 with higher scores indicating greater symptom severity. The classification is defined: 0-7 normal, 8-10 Borderline, 11-21 Abnormal. LS mean was calculated using the analysis of covariance (ANCOVA) model including treatment as fixed effect and baseline as covariate.

APD: All randomized participants who received at least 1 dose of study drug and had at least 1 post-baseline PASI assessment. Last Observation Carried Forward (LOCF) was used to impute missing post-baseline values.

End point title	Change from Baseline in 16-Item Quick Inventory of Depressive Symptoms- Self Rated (QIDS-SR16) Total Score at Week 16
-----------------	---

End point description:

The QIDS-SR16 is a self-administered, 16-item instrument in which a participant is asked to consider each statement as it relates to the way they have felt for the past 7 days. There is a 4-point scale for each item ranging from 0 (best) to 3 (worst). The 16 items are scored to give 9 individual depression domains (sad mood, concentration, self-criticism, suicidal ideation, interest, energy/fatigue, sleep disturbance [initial, middle and late insomnia or hypersomnia], decrease/increase in appetite/weight, and psychomotor agitation/retardation), which are summed to give a single score ranging from 0 to 27, with higher scores denoting greater symptom severity. The LS Mean (no multiplicity adjustments) are presented for each treatment versus placebo comparison at each visit and use an analysis of covariance (ANCOVA) model including baseline as a covariate and treatment as fixed effect in the model.

Secondary: Change from Baseline in Pain Visual Analog scale (VAS) at Week 12

End point title	Change from Baseline in Pain Visual Analog scale (VAS) at Week 12
-----------------	---

End point description:

The pain VAS is a participant-administered single-item scale designed to measure current joint pain from psoriatic arthritis (PsA) using a 100- millimeter (mm) horizontal VAS. Overall severity of participant's joint pain from PsA is indicated by placing a single mark on the horizontal 100-mm scale from 0mm (no pain) to 100 mm (pain as severe as you can imagine). A mixed effects model for repeated measures analysis was used. Least Squares (LS) Mean values were calculated using MMRM and were controlled for baseline as a covariate, visit, treatment and visit by treatment interaction as fixed effects, with variance-covariance structure set to unstructured.

APD: All randomized participants who received at least 1 dose of study drug and had at least 1 post-baseline PASI assessment. Only participants with self-reported psoriatic arthritis at baseline were included in the analysis. Last Observation Carried Forward (LOCF) was used to impute missing post-baseline values.

Secondary: Change from Baseline in Medical Outcomes Study Sleep Scale (MOS-S) at Week 16

End point title	Change from Baseline in Medical Outcomes Study Sleep Scale (MOS-S) at Week 16
-----------------	---

End point description:

MOS-S provides a concise assessment of important dimensions of sleep, including initiation, maintenance, respiratory problems, quantity, perceived adequacy, and somnolence during the past 4 weeks. Scoring based on 7 subscales: sleep disturbance, snoring, awakened short of breath or with headache, sleep adequacy, and somnolence (range:0-100,with higher scores for more impairment); sleep quantity (range:0-24), and optimal sleep (yes:1, no:0). Six(6) and 9 item index measures of sleep

disturbance were constructed to provide composite scores. Scores are transformed (actual raw score minus lowest possible score divided by possible raw score range * 100); total score range: 0 to 100; higher score = higher scores indicate greater problems with the attribute. The LS Mean (no multiplicity adjustments) was calculated using an analysis of covariance (ANCOVA) model including baseline as a covariate and treatment as fixed effect in the model.

Secondary: Change from Baseline in Work Productivity and Activity Impairment Questionnaire (WPAI Q) at Week 16

End point title	Change from Baseline in Work Productivity and Activity Impairment Questionnaire (WPAI Q) at Week 16
-----------------	---

End point description:

The WPAI questionnaire has six questions to assess whether the participant was currently employed (Q1); how many hours from work were missed due to problems associated with psoriasis (Q2) or any other reason (Q3); hours actually worked (Q4); degree that psoriasis affected productivity while working (Q5); and degree that psoriasis affected regular activities (Q6) over the past 7 days. Four separate overall scores were calculated, Absenteeism (work time missed) = $(Q2/(Q2+Q4))*100$, Presenteeism (impairment at work/reduced on-the-job effectiveness) = $(Q5/10) * 100$, Work productivity loss(overall work impairment /absenteeism plus presenteeism) = $(Q2/(Q2+Q4)+[(1-Q2/(Q2+Q4))x(Q5/10)]) * 100$ and Activity Impairment = $(Q6/10) * 100$. Each score ranges from 0 to 100 with higher scores indicating greater impairment and less productivity (worse outcomes). The LS Mean was calculated using ANCOVA model including baseline as a covariate and treatment as fixed effect in the model.

Secondary: Change from Baseline in Nail Psoriasis Severity Index (NAPSI) in Participants with Nail Psoriasis at Week 12

End point title	Change from Baseline in Nail Psoriasis Severity Index (NAPSI) in Participants with Nail Psoriasis at Week 12
-----------------	--

End point description:

The NAPSI is physician-rated and quantifies the severity of nail psoriasis by evaluating the presence or absence of psoriatic manifestations on the nail matrix and nail bed. Each finger nail is divided with imaginary lines into quadrants and scored for both nail matrix and nail bed psoriasis (range from 0 [absence of psoriasis] to 4 [presence of psoriasis in all 4 quadrants]). Participant's fingers and toes were evaluated and the sum of the scores was added resulting in a range of 0 to 160; higher scores indicate greater severity. If an individual toe or finger assessment was missing (not done), the average of the remaining measured digits was imputed and added to the sum. If <50% of the toes or finger assessments were missing, the imputation was performed. If >50% of the assessments were missing, then the sum of the scores was left as missing. LS mean was calculated using MMRM with baseline score as covariate, visit, treatment and visit by treatment interaction as fixed effects.

End point type	Secondary

Secondary: Percentage of Participants who achieve a 75% Improvement in the Psoriasis Area and Severity Index (PASI 75)

End point title	Percentage of Participants who achieve a 75% Improvement in the Psoriasis Area and Severity Index (PASI 75)
-----------------	---

End point description:

PASI combines the extent of body surface involvement in 4 anatomical regions (head, trunk, arms, and legs). For each region the percent area of skin involved was estimated from 0 (0%) to 6 (90%-100%) and severity was estimated by clinical signs of erythema, induration and scaling with a scores range from 0 (none) to 4 (very severe). Each area is scored separately and the scores then combined for the final PASI. Final PASI calculated as: sum of severity parameters for each region * area score * weighing factor (head [0.1], upper limbs [0.2], trunk [0.3], lower limbs [0.4]). Overall scores range from 0 (no psoriasis) to 72 (the most severe disease). Participants achieving PASI 75 were defined as having an improvement of ≥75% in the PASI score compared to baseline.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 May 2010	Protocol amendment a - The primary endpoint was changed to Week 12, updates to the inclusion criteria, and the addition of the sPGA scale with revisions to the secondary objective.
02 September 2010	Protocol amendment b - The overall study design and study objectives was revised to include an extended LY2439821 treatment period to provide long-term monitoring of safety and efficacy. As such, the double-blind treatment period of the original study design study was denoted as Part A, and an OLE period was added to the study as Part B.
15 May 2012	Protocol amendment c - Changed Part B dose to 80 mg ixekizumab Q4W to a dose strength and regimen that is consistent with the highest maintenance dose regimen being explored in Phase 3 clinical trials with ixekizumab.
17 April 2015	Protocol Amendment d - Was implemented to add an additional optional, open-label extended treatment period to Study RHAJ (Part C) where patients continued treatment with ixekizumab for up to 104 weeks, until ixekizumab has local commercial availability, or until study termination, whichever is soonest and discontinuation criteria was updated to align with ixekizumab Phase 3 protocols.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study stopped prior to the completion of Part C per protocol due to commercial availability of Taltz (ixekizumab) in all countries participating in the study. This decision was per protocol and did not adversely impact the objects of the trial.

Notes:
