

## Clinical trial results:

**A randomized, controlled, double-blind Phase III trial to compare the efficacy, safety and pharmacokinetics of GP2013 plus cyclophosphamide, vincristine, prednisone vs. MabThera® plus cyclophosphamide, vincristine, prednisone, followed by GP2013 or MabThera® maintenance therapy in patients with previously untreated, advanced stage follicular lymphoma**

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study was to demonstrate comparability of the overall response rate (ORR) in patients with previously untreated, advanced stage follicular lymphoma who received GP2013-CVP combination treatment to patients who received MabThera-CVP combination treatment.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy:

cyclophosphamide, vincristine, prednisone

Evidence for comparator:

MabThera

Actual start date of recruitment	01 December 2011
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

## Subject disposition

### Recruitment

Recruitment details:

A total of 629 patients were randomized at 159 centers in 26 countries, 314 patients to GP2013 (312 patients treated) and 315 to MabThera. Of those 314 patients in the GP2013 group, 2 patients were randomized by error and discontinued before any treatment with GP2013. The number of patients in both treatment groups remained similar.

### Pre-assignment

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
27 February 2012	The key purpose of this protocol amendment was to update and clearly define the attributes of the study inclusion and exclusion criteria, revise the recommended dose modification per current clinical practice, and change the primary ORR analysis from local to central blinded review of radiological response.
21 January 2013	The primary purpose of this amendment was to allow lymph node biopsy samples collected within 5 months of screening to establish and confirm the diagnosis of follicular lymphoma. As follicular lymphoma is a slowly progressing disease and lymph node biopsy is considered an invasive procedure, lymph node biopsy samples collected within 5 months of screening were allowed to confirm patient eligibility. To simplify the assessment and interpretation of tuberculosis testing at Screening, the status of active tuberculosis infection was assessed as per the local standard of care for patient eligibility. Furthermore, the population PK of GP2013 and MabThera was removed in the amendment as this analysis was not deemed necessary to compare the PK of GP2013 and MabThera.
26 September 2013	The primary reason for this protocol amendment was to add a planned interim analysis (based on specific health authority feedback) to support the regulatory filing of GP2013 with EMA and potentially other health authorities.
10 November 2014	this amendment was based on health authority feedback received in Feb-2014, which led to the removal of the planned interim analysis added in protocol amendment version 4.0.
09 June 2016	The amendment text clarified that blinded monitors, medical monitors, data management, investigator site staff, and patients would be kept blinded (with the exception of the coordinating investigator who has to sign the CSR for the Combination Phase) until the final DBL.
23 February 2017	This amendment described a Urgent Safety Measure that was issued on 22-Dec-2016. The clinical batch of GP2013 was quarantined due to out-of-specification findings in routine stability testing.
